Gold Disk has the answers.

For the Professional

Is there a serious desktop publishing program for the Amiga?

Definitely. The gold standard is Gold Disk's Professional Page. It's got features that have made it the choice of pros across the globe. Like built-in kerning, leading, and tracking.

A wide variety of resizable PostScript fonts. The ability to handle IFF bit-mapped graphics and structured graphics. Built-in text and graphics editing. Even the ability to output color separations for color publishing. Professional Page is US\$395. 1 MB required.

How come my desktop publications just don't have that professional "slickness"?

Why not let a pro do some of the work for you? Gold Disk's Professional Page Templates package gives you over 50 classic layouts for ads, newsletters and brochures prepared by a top New York designer. All the type specs are built right into the pre-defined boxes, so you can just flow your copy right in. And the documentation is more than just a manual - it's a crash course in graphic design. The Templates package is US\$59.95.

How can I create smooth, professional-looking graphics for my desktop published documents?

You need Gold Disk's Professional Draw, the first serious illustration program for the Amiga. It uses *structured* graphics, so curves don't have jagged edges when they're enlarged. Shrink or expand your illustrations, and they'll still look great. It has a user-

definable palette of millions of colors, supports PostScript, and works with the latest update of Professional Page. There's also an optional disk of pre-drawn structured clip art. Professional Draw is US\$199.95. 1 MB required. Structured Clip Art is US\$59.95.

Is there a quick and painless way to digitize drawings and photos for use in desktop published documents?

There is now. Gold Disk has developed a hardware/software interface for the Canon IX12 black and white scanner. It saves IFF pictures at 300, 200, 150, and 75 DPI. Simply feed a page into the scanner and about 15 seconds later, the job is done. It's that easy. Scanner and interface US\$1095.

For the Home Studio

Is there a way to create high speed color Amiga animation that lasts longer than a few seconds?

You need Gold Disk's MovieSetter. It lets you create 32 color animation that's minutes, not seconds long. All without using truckloads of memory. There's a powerful on-screen tool kit, full panning control over stereo sound effects and music, and animation speeds as high as 60 frames per second. It comes with its own professionally drawn characters (called "MovieClip" files), or you can import art from your favorite paint program. MovieSetter is US\$99.95. Only 512 K required. Extra MovieClip disks are US\$34.95.

3D modeling and animation programs seem to require too much time, energy and patience. Is there a better way?

There sure is: Gold Disk's 3D modeling program, Design 3D. It's not only sophisticated enough to meet the demands of pros, but its elegant user interface makes it easy for the home hobbyist, too. You can model in wire frames with 6 line types and 16 colors. You can see 4 simultaneous views of your objects, with 4 programmable sources of light. And if you're an animator, there's the helpful option of importing/exporting objects to Aegis' VideoScape 3D. Design 3D is US\$99.95. 1MB required.

I've got a hyperactive imagination, an undying passion for comic books, and an Amiga. Is there hope for me?

You clearly need ComicSetter, Gold Disk's one-of-a-kind program that lets you create multi-page color comics on a 1 MB Amiga. It's got tools for creating panels, word balloons, and color comic art. Or you can cut and paste "Comic Clip Art" characters and scenery drawn by pros. Even import artwork from your favorite paint program. You can print your work out on popular color or black and white printers. ComicSetter is US\$99.95. Extra ComicArt packages are US\$34.95.

For the Home Office

It seems like all Amiga word processors are either too slow and complicated or too simple to be useful. Isn't there a happy medium?

Yes. It's called Transcript, and it's brand new from Gold Disk. Not only is it easy to learn, but it has advanced editing features that even power users won't outgrow. Just as important, Transcript's been heavily "torture tested", so you can trust it to be durably "crash resistant". It has a built-in 90,000 word spelling checker and fully supports Professional Page. It's lightning fast. You won't want to use anything else. Transcript is US\$69.95. Runs on 512 K.

I need a sophisticated budgeting program, but I can't budget much time to learn it. What's powerful but simple?

Gold Disk's Desktop Budget is the perfect program for you. The key is Amiga graphics: all of the elements of your budget are represented by their own icons. So balancing a complex budget is as easy as pointing and clicking your mouse. Features include automatic report generation, monthly payment reconciliation, year-end roll-over, and detailed records of all transactions. Desktop Budget is US\$69.95. Runs on 512 K.

For more information, or to order, call Gold Disk at 1-800-387-8192 or 1-416-828-0913.

DeskJet perfect

Professional Page[™] v1.1
from
Gold Disk[™]

PageStream[™]
from
Soft-Logik

Both are actual output using a Hewlett-Packard DeskJet inkjet printer.

PageStream creates characters using scalable outline font technology.

This means that you get smooth output on any printer. And isn't perfect output what desktop publishing is all about?

You see, each character is made up of a mathematical outline and a fill. The curves and lines of each character are much like a plot of points on a graph.

PageStream goes right to the core power of your Amiga because it is written in assembly language. Its speed is exhilarating!

What is power without grace? PageStream has a uniquely intuitive interface. We have created animated representations within the dialog boxes. This makes using the many powerful features a breeze. You can see what effect each change will have before you click OK.

And, PageStream is free-form. This means that you are not limited to boxes for text or graphics. Just place a graphic or begin typing anywhere on the page. PageStream has the typographic, graphic, and word processing tools you need with the speed to back them up.

Powerful tools, smooth output, and it will run on a 512K system!. That's PageStream.

PageStream, just \$199.95. It's pure publishing pleasure.

PageStream sends the outline to the printer and then directs it to fill in the outline at its maximum resolution. The result is as smooth as you see above.

Well this calls for some serious computing. But isn't that why you bought an Amiga?

REVIEWS

SPELLING CHECKERS: FLEET CHECK (*Professional*), GOLD SPELL (*Gold Disk*), ZING!SPELL (*Meridian*) 12

Three spell-checking programs, each with a different way of saving your bacon when it comes to writing documents.

MIDI MAGIC (*Circum Design / Brown-Wagh*) 14

A 16-track sequence-and-song editor very much in the Intuition style.

CYGNUSED PROFESSIONAL (*CygnusSoft*) 84

A full-featured text editor that seems to do it all.

PHOTON VIDEO: CEL ANIMATOR (*MicroIllusions*) 84

An animation package that can also synchronize video with sound.

MICROFICHE FILER PLUS (*Software Visions*) 87

An enhanced version of SV's popular data-management program.

B.A.D. (*M.V. Micro*) 88

Blitz your disks with a utility that counters the effects of disk fragmentation.

DRAW 2000 (*Aegis*) 90

An enhanced version of Aegis' Draw Plus with a true Amiga interface.

PROSCRIPT (*New Horizons*) 93

A utility that can add PostScript printer support to several Amiga word processors.

DELUXEPRINT II (*Electronic Arts*) . . . 94

A utility for quick printing of specialized documents.

GAMES

THE GAME PRESERVE *By B.G. Hunter* . 72

B.G.'s safari this month is via zamboni as he takes to the ice for a pre-release look at Bethesda Softworks' highly-touted Wayne Gretzky Hockey. More game reviews follow his column:

DUNGEON MASTER (*FTL Games*) 74

On the trail of the vicious Lord Chaos in this role-playing adventure game.

CARRIER COMMAND (*Rainbird / Mediagenic*) 76

Full-tilt naval battle action with vivid 3-D color in this strategy/arcade mix.

SWORD OF SODAN (*Discovery*) 78

Electronic gore galore as you battle with Zoras the Necromancer.

MENACE (*Psygnosis / Computer Software Services*) 79

Blast away at over 60 varieties of villains in this fast-paced arcade thriller.

TRACERS (*MicroIllusions*) 80

The action is fast and furious in this arcade-based Tron lightcycle game.

WARLOCK (*Three-Sixty Pacific*) 81

Be the warlock who tries to recover the magic Karna jewel in this 12-level strategy/arcade challenge.

Don't Start from Scratch Use 3D Design Disks!

A collection of professionally designed 3D models and components for use with Videoscape 3D*, Modeler 3D*, Sculpt 3D* or Sculpt-Animate 3D*.

Architectural Design™
Create 3D renderings of your dream house or build an entire 3D city from the ground up. Visualize and render real-world architecture. Component parts include: doors, windows, arches, roofs, walls, stairways and a variety of architectural constructs.

Future Design™
Get a fast start on your 3D explorations with this modular construction set of three dimensional objects that include everything you need to build spacecraft, space stations, bases, vehicles, robots and androids to create your future 3D world.

Human Design™
Populate your 3D universe! This disk includes complete male and female prototypes in skeletal form with complex head and hand structures for startling realism and detail. Modify figures to create the infinite variety of the human form.

Microbot Design™
Advanced robotic designs and component parts are featured on this disk for a variety of 3D applications. Use these detailed, surrealistic modules to create humanoid and alien cyborgs. Comes complete with blueprints, models and design tips.

Look for these Amiga® 3D Design Disks, only \$34.95 each, at your favorite computer store, or call 800-234-7001 toll free!

NOW FEED YOUR COMPUTER DELICIOUS COLORS, AT A PRICE THAT'S EASY TO SWALLOW.

Introducing the Sharp JX-300 letter size color scanner.

Our affordable, new JX-300 can scan the most appetizing color originals up to 8½" x 11". It also has a small footprint and fixed scanning bed to give you more usable desk space.

This new color scanner joins our larger, widely acclaimed JX-450, which handles originals up to 11" x 17". The JX-450 also scans 35mm slides and overhead transparencies with an optional mirror unit.

Both units scan at 300 d.p.i. resolution and 256 shades for

each element to give a range of 16.7 million colors. Not to mention 256 gray scales for monochrome systems. Both are compatible with the leading PC systems.

Sharp also offers the JX-730 color inkjet printer to give you plain paper color printouts that are faithful to your originals.

If you're looking into scanners—even black and white scanners—don't overlook the future. The future is mouth watering color. For information, call 1-800-BE-SHARP.

ZEITGEIST

A letter to the editor.

I HAD NINETY percent of my editorial written yesterday. It was all about hardware and our buyer's guide and trends and the usual sort of ramblings that I sometimes fall into when I haven't anything earth-shattering to say. This morning I was going through some mail and ran across this letter. Somehow it doesn't quite fit in Repartee, but it needed to be printed. I thought about following the letter with some kind of ending, or another address for people to write to, but I don't think it needs anything.

December 12, 1988

Gentlemen:

Mr. Rick Rodriguez, President of the Miami Amigos, of which I am a member, suggested that I write this letter

to your magazine to tell you about my late brother, Elier Dacal. Elier purchased an Amiga 500 computer last spring, only about four months before his death, a victim of AIDS.

Before he became ill, Elier had lived in Boston for a number of years where he played the violin with the Civic Symphony, North Shore Philharmonic, and Brookline Symphony Orchestras, and began a promising career as a composer. He studied fashion design, developing his talent in drawing and painting. He became interested in photography, combining it with his artwork, using themes from science fiction, in which he had a keen interest. When his illness forced him to return to Miami so that my mother and I could take care of him, he had to give up most of his creative activities, as a result of the disease. He had been suffering its devastating effects for about two years when he became interested in owning the computer. He wanted the chance to exercise his creativity even while confined to the house, and eventually to his bed.

In a short time, Elier not only mastered the intricacies of the computer, in spite of excruciating pain and a rapidly encroaching paralysis, but produced a wealth of original art and music which is uniquely his and luminously beautiful. His love of science fiction and the future is re-

flected in much of it. My brother never resigned himself to the onslaught of the disease which was to claim his life, but thought always of the future, full of plans for his work. Even when he was no longer able to write, and lying flat on his back, using the mouse, he worked far into the night, seemingly oblivious to the pain that racked his body. By mid-summer he had to be hospitalized, and on August 18, 1988, he died.

I was primarily responsible for my brother's care during his illness. He was not only my younger brother, but my dearest friend. Having shared his interest in music and art, I am able to evaluate the degree of excellence of his work. However, this remained locked in the computer after his death, as I had never found the time to learn how to operate it. Taking care of Elier had consumed all of my time. I had no idea where to turn for help. Finding the name and address of a software manufacturer among his books, I wrote to ask for the name of any resource in Miami where I might receive instruction. I received a letter referring me to

the Miami Amigos and suggesting that I contact Mr. Rodriguez, which I did. He invited me to attend a meeting and become a member. At the meeting several people came forward, offering their help, and now I have access to my brother's work. I hope to be able to show some of his pictures to the group at a future meeting.

My ultimate goal is to preserve Elier's work and offer it for the purpose of raising funds for AIDS research. Some friends who knew about his valiant struggle have offered to help establish a fund, provided I can furnish them with the results of his creativity. Now, with the help of the Miami Amigos, I look forward to the possibility of achieving this goal.

Sincerely yours,

Ms. Saray Dacal

AMIGA 500 USERS! NOW GET A2000 POWER!!

Announcing

THE WORLD'S FIRST
AUTOBOOTING HARD DISK
FOR THE AMIGA 500

IMPACT A500 – HD/RAM SUBSYSTEM

offers everything any A500 owner has ever dreamed of – in one compact, easy-to-install, add-on subsystem; provides the same high performance as our top-of-the-line A2000 controller

IMPACT™ A500 – HD/20
A500 – HD/30
A500 – HD/40Q
A500 – HD/45
A500 – HD/80Q

Available with a built-in 20, 30, 40, 45 or 80 Mega Byte Hard Drive and an optional 2MB plug-in FAST RAM/AUTOBOOT expansion module.

• All partitions can be FFS with V1.3 AUTOBOOT
• 11/19ms average access time on 40Q & 80Q models

• Internal & external SCSI connections
• DMA data transfer to onboard 16K buffer

A2000 USERS!

Still

THE MOST
POWERFUL HARD DISK
SOLUTION FOR
YOUR A2000!

IMPACT™ A2000 – Hard Card 30
A2000 – Hard Card 45
A2000 – Hard Card 40Q
A2000 – Hard Card 80Q
A2000 – Hard Card 100

The GVP IMPACT-HC series of "Hard-Cards" for the Amiga 2000 matched with the 3.5" Quantum ProDrive hard disk drives, provide turbo performance and unbeatable value at list prices as low as \$18.00 per Mega Byte! The Quantum ProDrives provide average access times as low as 11ms with their built-in 64KB read-ahead cache and offer a MTBF of 50,000 hours which is almost twice the industry average.

REPARTEE

*Comments, complaints, and concerns
from AmigaWorld readers.*

DEAR MAC. . .

LAST DECEMBER, one of your sister publications, *Macworld*, listed the year's best games for the Mac. After choosing Crystal Quest as the best arcade game and best game for the Mac II, the column concluded with the comment "It's enough to make Amiga owners ditch their machines and get serious." What follows is the reply I sent to them.

Dear Sirs:

The last line of the games column in the December issue prompted me to write. Of course, to ditch my Amiga, I had to turn away from some of my other work: editing TechAlliance's Amiga magazine with Professional Page (unfortunately, since budget constraints make it a black-and-white magazine, I don't get to use ProPage's built-in color-separation generator); writing articles for the magazine with WordPerfect, and image-processing graphics for the issue with Deluxe PhotoLab. I also had to take a break from programming with Benchmark Modula-2, keeping track of my potential clients with Superbase Professional (so far I have been too busy to customize data entry with Superbase's program-

ming language), and handling my accounting with MaxiPlan Plus (including generation of pie, line, and 3-D bar graphs of relevant data). Needless to say, with the Amiga's multitasking, I can run all these programs simultaneously; if I add more memory to my system, I could also generate ray-traced images with Sculpt-3D in the background. And that's not to mention the IBM programs I can run concurrently via the Bridgeboard. Is that serious enough for you?

P.S.: By the way, I had an opportunity to play Crystal Quest at a local store. By Amiga standards, it would be a good public-domain or shareware offering, but lags far behind even average Amiga entertainment software.

*James David Walley
Bit Player Software
Everett, WA*

BASIC FLAG-WAVING

WHY DOESN'T Commodore pay sufficient attention to BASIC? I know "proper" programmers write in C, but BASIC (especially when structured) has its uses. C, especially on the Amiga, is fiendishly hard to learn (I am trying!). BASIC is good for trying out a general idea for a program without investing too much effort; and for some

programs, BASIC is perfectly adequate anyway.

There seems to be little development in Amiga Basic from Workbench 1.1 to 1.3, and there is still a bug in it connected with the SAY command. Loading an ILBM picture requires a long, long routine (thank you, Carolyn Scheppner, for writing one).

In the early days of the C-64, it was apparent that its BASIC was inadequate, and it was left to a lad of 16, David Simons, to fill out the commands with Simons' Basic, which was quite a success. It is time that some enterprising programmer did the same for the Amiga. We need, for a start, a "Loadpix" command. And the code for the Amiga Basic Editor should be improved: I have seldom seen such slow scrolling!

*Robin Hoare
Rawene, Northland
New Zealand*

BRING BACK KICKSTART

I AM DISAPPOINTED that the A500 and A2000 don't use Kickstart disks. Although it is generally convenient to just turn on the computer and put in a program disk, hasn't the Amiga lost a lot of its expandability? The ability to put in a new, revised Kickstart disk and virtually have a whole new computer at your fingertips was once a unique characteristic of the Amiga, but this

is now limited to the rapidly disappearing A1000s. If the Kickstart disk is gone forever, then I wouldn't think some sort of switch between ROM chips would be too much to ask. This would keep the expandability of the A1000 with the fast loading and convenience of the A2000s and A500s.

*Braddock C. Gaskill
Columbus, NJ*

AMIGATEX CORRECTION

AUTHOR W. JEFFREY Blume has pointed out that we introduced an error into his article on ARexx ["ARexx: New Kingpin of Multitasking?" Nov. '88, p. 55], mistakenly referring to AmigaTeX as a public-domain program. AmigaTeX is a commercial product available from Radical Eye Software, Box 2081, Stanford, CA 94309, 415/32-AMIGA.

Send your letters to: Repartee, *AmigaWorld* Editorial, 80 Elm St., Peterborough, NH 03458. Letters may be edited for space and clarity. ■

ONLY DIGI-PAINT CAN DO ALL THIS

Digi-Paint gives you the best Amiga graphics possible — using all 4,096 colors at once! Unleash your creativity with powerful tools and dozens of special effects, including blend, shade, tint and mirror. Digi-Paint is the perfect way to manipulate pictures digitized with NewTek's Digi-View Gold. Create images for printouts, presentation or desktop publishing with the award winning Digi-Paint. Here's what people are saying about Digi-Paint . . .

"We were very impressed with the power of Digi-Paint. We found lots of potential for creativity and enjoyment."
AMIGA WORLD

"We've been blown away by the effects and the tools that Digi-Paint supplies. The results can be spectacular."
INFO

"Digi-Paint is the first paint program that makes it feel as if you're actually painting. Digi-Paint gives you unlimited freedom."
COMPUTE!

"We have personally seen \$40,000 computer graphic terminals that couldn't come close to Digi-Paint's power."
COMPUTER SHOPPER

"Digi-Paint is remarkable."
BYTE

"Digi-Paint is a \$60 wonder. Using the dizzying menu of features, the results can be startlingly realistic."
VIDEO MAGAZINE

"Digi-Paint is a new generation paint program with exciting and unique features you will simply not find anywhere else. It is extremely powerful, and at its price, it's a steal."
AMAZING COMPUTING

Digi-Paint is available now at your local Amiga dealer or call 1-800-843-8934.

ONLY \$59.95

NOTE PAD

Compiled by Linda Barrett

Holiday Cheer

THE AMIGA CERTAINLY had a happy Christmas in Britain, if last December's London show was any indication. Developers from all fields piled presents under the tree.

Holiday diversions came from several sources. Telecomsoft (01-379-6755) offered three. In **Fish** (designed by Magnetic Scrolls), you play a goldfish trying to save the planet. Wargamers have plenty of ammunition with the **Universal Military Simulator** (released in the US by Rainbird Software: 415/322-0900) and **Tracker**, a combination of strategy and arcade sequences. Reports from Mediagenic UK (UK: 01-431-1101, US: 415/329-0800) indicated that **Afterburner** is finished and eagerly awaited throughout Europe. A conversion of **R-Type** is the next blast-'em-up on the schedule. Microdeal (UK: 07-256-8020, distributed in the US by Michtron: 313/334-5700) displayed **International Soccer**, a promising simulator, **Turbo Trax**, a racing game in which you can design your own circuits, and **Fright Night**, a arcade-adventure game. Precision Software (01-330-7166) left smoking joysticks behind with **Charon 5** (distributed in the US by Mindware International: 705/737-5998).

Capturing the sounds of the season were Microdeal's **Midi Interface** and **Sampler Box** and Trilogic's (02-746-91115) low-cost **audio digitizer**. For playback, Trilogic offered small amplifiers to drive headphones or speakers from your Amiga. The company was also seeking a US distributor.

To catalog all your new goodies, Precision Software suggested **Superbase Personal 2** (distributed in the US by Precision Incorporated: 214/929-4888), which adds mail merge and a text editor to its database capabilities.

Already established in the states, Supra's **hard drives** and **modem** are now being distributed in the UK by Frontier Software (04-236-7140). A less fortunate hardware manufacturer was Robtek, which has ceased trading. Club 68000 (01-977-9596) has taken over much of Robtek's old business.

While most developers were keeping their plans for 1989 under wraps, Commodore was pledging continued success. The Amiga 500 is now the de facto upgrade path for C-64 owners.

—Stu Menges
Middlesex, England

One of three Amiga-based Information booths in Oslo, Norway.

Oslo in a Box

FOR LOST SHOPPERS, the InfoBox is a savior. If you know what you want to buy, it will tell you where to find it and how to get there. More than a map, the box can plot your route for you.

The metal box houses an Amiga-based Information booth. The shopping-center version greets you with a sildeshow. Press any key to see the main menu, from which you can request information on various types of shops, restaurants, and facilities. If you choose restaurants, for example, a three-second restaurant-related advertisement plays, then a list of restaurants appears. Select an entry and press the enter key to see a picture of the establishment, a menu, or a

price list. Press the enter key again for a map of the mall with restaurants marked by flashing dots.

The city box improves on the process. If you are interested in pet shops, for example, you can request the name and picture of the closest one. A map follows displaying your position and the pet shop's, then a detailed map pinpointing the pet shop. Press the enter key once more for a list of public transportation that will take you to the shop.

For designer Martin Joyce Nygaard of Oslo, Norway, the InfoBox is a rapidly growing business. He offers two configurations—the boxed version powered by a one-megabyte A500 with a 40MB hard disk and a 1081/84 mon-

itor, and a store-window version powered by an A2000 with a 20MB or 40MB hard disk. Five keys connected to the joystick port control the box-based system, while heat or light sensors glued inside the window control the A2000-based system. Both were programmed in C. The retail price is a hefty £5000, but Nygaard splits the advertising revenue with the box owner.

Three InfoBoxes are currently in operation—at the Norwegian State Branch of Public Information, the Center for Public Transport, and Norway's largest shopping center. For more information, write to Martin Joyce Nygaard at: InfoBox A/S, Skippergt. 27, 0154 Oslo 1, Norway, or call 047-233-3250.

Journey To The World Of Invincible Knights And Incredible Sieges, Battles, Combats And Victories.

Kingdoms of England

Be king or pauper, it's all in how you play the game. Kingdoms of England is only for the stout of heart and the strategic of mind.

Go back through time with authentic battle sounds specifically scored and a non-repetitive sound track for the moods and sequences of the game plan.

You will make unprecedented moves as you control multiple groups of knights simultaneously.

Lead provocative damsel rescues and capture the kingdoms of rebellious lords.

Experience exciting animation and graphics throughout all game sequences; plan your strategy with a large, smooth, scrolling battlefield; play one-on-one, or with a partner on a split screen design.

Kingdoms of England, play like the lion hearted and be king.

FLEET CHECK GOLD SPELL II ZING!SPELL

Polish your prose with a backseat speller.

By Neil Randall

FEW THINGS CAN be as damaging to a document's credibility as a misspelling. Three spell-checking programs—Fleet Check by Professional Software, Gold Disk's Gold Spell II, and ZING!Spell from Meridian Software—are designed to bolster your image.

Each of the programs I reviewed takes a different approach. Fleet Check works in real time, alerting you to errors as you type. Gold Spell II is a batch checker; it examines your document after you have finished typing. Positioned square in the middle is ZING!Spell, which operates in either real-time or batch mode. Of the three, only Fleet Check adds a thesaurus, although mailing in the registration card for Meridian's ZING!Spell entitles you to a free one. The lack of a strong thesaurus in all programs comes as something of a surprise, as thesauri are commonly bundled with spell checkers in other computer environments.

FLEET CHECK

Fleet Check's manual clarifies the program's function immediately. "Please note," it reads, "that Fleet Check will not be able to spellcheck documents already stored on disk. Its only purpose is to spellcheck as you type and to allow you to access the Thesaurus." For many

users, that statement renders the package useless, as spell-checking after the fact is often the preferred method. More disturbingly, this contradicts a statement on the front of the package: "Documents can be checked while you're typing or when completed."

Fleet Check contains a 90,000-word dictionary. A separate, customizable dictionary can accommodate 10,000 additional words. When you enable the auto-spell mode, both dictionaries load into memory; the program scans your document for misspellings and finds substitute words quickly. Although the manual suggests you load Fleet Check before loading the word processor, this isn't really necessary as long as your word processor allows access to the Workbench window. A warning, though: I had trouble both post-loading and pre-loading Fleet Check in conjunction with WordPerfect (WordPerfect Corp.), Kind Words (The Disc Company), and TextPro (Abacus) on my Amiga 500 with 512K. With a one-megabyte A2000, the problem disappeared.

As soon as you type a word that is not in Fleet Check's dictionary, your screen flashes and the speaker clicks. If you want to correct it, hit the two shift keys simultaneously. Then, at the top of the screen, the Fleet Check window appears with an array of up to eight suggested corrections. You now have four choices: Use the mouse to select one of the words, type in the correction, add the word to your dictionary, or hit the return key to stop Fleet Check from noticing the word for the remainder of the writing session.

Unfortunately, the four-page manual points up almost as many conditions as features. First, your incorrect word is kept in memory only as long as you don't type more than 60 characters (one

normal line) afterwards. Another condition is that Fleet Check "can get lost in your text and will not be able to reinsert the [correct] word" if you invoke menus, function keys, ALT- or CTRL-key sequences, and so on, before calling up the incorrect word. To make things worse, you must be in Insert mode, and your text must not be justified or centered. Finally, the program can get lost all on its own if you type several misspelled words consecutively.

Fleet Check's usefulness is limited. Its thesaurus is passable, and it works well as a simple word-by-word checker, but it needs a good deal more development.

GOLD SPELL II

Like Fleet Check, Gold Spell II loads entirely into memory, thereby maximizing speed. One highly-commendable feature is its specific support for Amiga word processors. You can select a format for WordPerfect, Textcraft and Textcraft Plus (Commodore), Scribble! (Micro-Systems Software), ProWrite (New Horizons Software), the Amiga Notepad, and Gold Disk's Professional Page or PageSetter. Choosing the Generic format lets you check ASCII files produced with any program.

Gold Spell II contains a 90,000-word dictionary, and offers three application options for checking completed documents. You can check the spelling of an individual word (this is useful if you have Gold Spell II multitasking behind your word processor). For interactive checking, the program shows you each misspelled word as it appears in the document, and allows you to fix mistakes immediately. With Batch method, Gold Spell checks the document and stores

suspect words for you to correct later.

The second, Check Document, is the most useful method. When Gold Spell II finds an incorrect word, its screen splits in half. The top shows the word in its context of several surrounding lines. At the bottom, the Check Document window displays a series of options. You can click in the text string and correct the word manually, or you can click Accept to change nothing. If you select Accept and Remember, Gold Spell will ignore future occurrences of that word and keep it in memory to be saved later as part of your customized dictionary. You can also check the dictionary itself: Selecting Scan Dictionary lets you search the dictionary for the word you want, while choosing Guess Spelling asks Gold Spell to do the work for you. (I tested Guess Spelling with 50 misspelled words, and the program replaced 40 correctly, certainly a good percentage.) A final option lets you list a word as one to be substituted with another word later. If you habitually misspell a certain word, or you like to abbreviate as you type, the substitute feature is extremely handy.

Batch mode checks the spelling of a file non-interactively. You simply select Batch from the Project menu, then go for a 5- to 10-minute walk. When you return, the Batch Mode window will show the number of incorrect words found, and will give you the option of editing these words immediately or saving the list. Choose Edit, and the words appear, one by one and (unfortunately) without surrounding context. At any time, you can quit and return to the same spot later. Apart from the lack of context, the system works very well.

As with the other two checkers, Gold Spell II's dictionaries are alterable, either

A spelling checker can save you from having to eat your words.

via the Accept and Remember option or by using a word processor capable of saving ASCII files. You can create customized dictionaries and define substitute files for various uses. Gold Spell even lets you load an Exception file, which lets you list words you want Gold Spell *not* to recognize.

Gold Spell II can deliver document statistics, including the number of words and sentences in the piece and the approximate grade level of readability (Gunning Fox Index). A final statistic isolates the number of unique words in the document, letting you check for overuse of specified words.

ZING!SPELL

Without doubt, ZING!Spell is the most feature-laden of the three packages. Besides supporting ARexx commands, the program has four separate real-time spell-checking options. You can check words whenever you choose, or set the system to check after a carriage return, only the last word entered, or each word as it is typed. ZING!Spell lets you work in either Workbench-screen or custom-screen modes.

ZING!Spell lets you create exchange dictionaries—specify and type abbreviations for longer words, and the program will automatically substitute them in the text. You can also create and edit custom dictionaries. The checker can be suspended at any time, and you can scan the dictionaries for spelling suggestions. Finally, you can check as you type, or you can check a finished document.

In practice, the checker does little to help you find substitutes for misspellings. It alerts you to errors, but of the 30 samples I tried, the dictionary gave me correct spellings for only ten. The reason is that ZING!Spell uses a wild-card system to help you locate words automatically—and this rarely does what you want. You can manipulate the misspelled word to help the dictionary find the correction, but using a traditional desk dictionary is preferable. ZING!Spell works in identifying typos, but not very well as a spelling corrector.

Although the program becomes easier to use with practice, ZING!Spell is initially slow and awkward to use. In this regard both Fleet Check and Gold Spell II are superior; their manuals and interfaces help instead of impede. ZING!Spell's manual is the worst I have seen in three years. As if dot-matrix-printed documentation isn't hard enough to read, the manual has almost no perceivable organization, and its instructions are very poor. If you want a highly-versatile checker, buy ZING!Spell, but be sure you have the technical know-how to make it work.

SPELLING IT OUT

Most writers, programmers, and other applications-users—spell checkers aren't just for word processing, after all—will be happiest with Gold Spell II. It helps ►

you correct finished documents quickly and easily, and its dictionary options and statistics are useful. ZING!Spell, on the other hand, is useful for the technically-adept looking to customize their utility. I recommend Fleet Check only for poor typists and poor spellers.

MIDI MAGIC

Saw measures in half and make notes disappear.

By Bob Lindstrom

WHILE MOST OF its competitors employ proprietary-interface designs, MIDI Magic, a 16-track sequence-and-song editor, consistently adheres to the Intuition style. This factor contributes ease of use to MIDI Magic's features, but, in some cases, it also impedes the efficiency of an otherwise smooth-running program.

MIDI Magic provides track-, sequence- and song-editing modes. Each mode functions in a separate window, all of which may be present on the screen at once. Because overlapping windows can clog the screen, the program lets you shift from a medium- to a high-resolu-

tion display that shows more data with less confusion. The drawbacks are interlace flicker and extra RAM overhead.

FOR MY FIRST TRICK...

MIDI Magic offers 26 sequences, each with 16 tracks. Composing typically begins by choosing a sequence, A through Z, and entering the Tape Transport and Track Display to start recording. The Tape Transport contains typical tape-recorder-type controls (play, record, fast forward, and fast backward), a counter for current measure, beat and pulse location, and punch in and out settings for re-recording segments.

In the Track Display, you select a track, place it in Record mode, and click the Record button in the Tape Transport window. At that point, you can set an audio-visual metronome to click and flash the tempo.

In addition to a Tape Transport slider that lets you set a tempo manually, the Set Tempo menu option lets you choose

MIDI Magic's interface is purely Amiga.

the music's speed by rhythmically hitting a synthesizer key or the Amiga's space bar (the computer tracks the strokes and automatically sets the tempo). Although the space-bar option proved totally reliable, I found this feature prone to MIDI error when accessed from the synthesizer keyboard.

Those who demand the utmost in MIDI clock accuracy will be delighted with MIDI Magic's clock-pulse options. You can choose clock rates from the common 24 PPQN (pulses per quarter note) to 480, and a Custom option lets you dictate any unusual PPQN your rhythmic heart desires. MIDI Magic contains an internal clock, and it is compatible with an external MIDI clock

(invaluable when porting sequences from other systems), step-time note entry, and drum sync output.

MIDI Magic's solution to the chronic MIDI-recording problem of stopping the "tape" precisely at the end of a measure is one of the best I have seen. In the Tape Transport window, you click the time counter to one pulse beyond the end of your track (usually, it will be the first clock of the next measure). Then, clicking on a Set End button automatically extends or cuts the track to that length. After you've recorded a few tracks, you can use the Track Edit options to copy and combine (bounce) several tracks into a single track, to Global Delete specific types of MIDI messages from all tracks (remove all MIDI velocity or aftertouch data, for instance), to manually enter System Exclusive and other specialized MIDI commands, or to quantize the rhythms.

SPLIT-SECOND TIMING

Quantizing (aligning and correcting rhythmic values) is particularly flexible in MIDI Magic. Several techniques are available, and you can quantize to any value from half notes to 32nd-note triplets. Note Coherent will preserve the note duration but shift the beginning to the quantize point. Note Duration retains the note on position but alters the note's length. Note On Only retains the note off position but changes note on to the quantize point. Finally, On & Off shifts both events to the nearest quantize point.

Unfortunately, the program does not have an Undo feature, and it will not automatically back up a track prior to quantization. If you might want to return to a particular version of a track, you should copy it.

In the Track Event Editor window, you alter or insert individual MIDI values in a track. To alter values, you must hold the left mouse button down over the desired number or note value on screen, then roll the mouse left and right to change the entry. If you prefer typing in new values, the mouse method may seem sluggish and inconvenient. There is no keyboard option, however.

Another complaint about the Event Editor is that it displays MIDI data be- ►

FOUR WAYS TO MAKE YOUR AMIGA SCREAM

Now you can take the world's number one arcade game home! All the action-packed arcade thrills of this awesome hostage rescue are ready for home video play.

This is the original arcade hit. Thrill to the arcade quality graphics of this fast-paced, street-style karate brawl. Find out what real action is all about!

If you want to make your Amiga explode with action you've got to give it dynamite games. These are the world famous original arcade screamers. Operation Wolf™, Bubble Bobble™, Renegade™ and Rastan™ will make your Amiga Computer scream with arcade quality graphics and stereo sound.

Everyone knows that arcade games are the

The #1 game in Europe for over 3 months. Scramble through 100 screens of laughs as your brontosaurus buddies, Bub and Bob, drive you crazy with non-stop action.

Now you can thrill to one of the biggest-ever coin-op hits on your home computer. Rastan's mind-blowing graphics take you to a magical land of adventure and excitement.

benchmark for all other video games and Taito has been an arcade leader since 1953. Since then we've made over 1,000 classics for arcade and home play. Count on Taito to bring the heat of the arcade to your home computer.

ginning only with the current position of the Tape Transport. If you stop the transport in measure three at beat one, the Track Edit window does not display any MIDI track data in the first two measures; you have to "rewind" the Tape Transport to view the entire track.

After you record as many of the sequence's 16 tracks as you need, you move through any remaining sequences until you complete all the segments. At that point, you go to the Song Editor window and assemble your sequences into a score.

When assembling a song, you can repeat a sequence up to 99 times, transpose it to another key, and change the tempo. The Song Editor window displays values for these options as well as the elapsed time, and any comments that you may have attached to the sequence.

MIDI Magic's song-building design is logical, but not very flexible. You cannot compose a single drum pattern and mix and match it among several sequences, for example, because tracks must remain within their assigned sequences. Also, while you can place completed sequences

in any order in the Song Editor, only one sequence can play at a time. The inability to combine or overlap sequences is an unfortunate limitation.

THEY DO IT WITH MIRRORS

Although reliable design and operation is the norm in MIDI Magic, the program has a few eccentricities. As the documentation warns, program execution can be slow, especially when several windows are open at once. Menu selection tends to lag, too, with the cursor hesitantly jerking from one menu option to the next.

A glaring omission is the inability to save sequences in the MIDI-file standard. Now that the standard is in place, every MIDI sequencer should support it. This omission precludes MIDI Magic from participating in inter-program and inter-operating system trading of MIDI data.

While the printed manual has a helpful—albeit brief—tutorial, the disk contains only a trio of crude demo sequences. With about 35 percent of the disk free, there was plenty of room for

example songs and sequences to help the beginner get started.

Lastly, aside from function-key equivalents for Tape Transport commands, MIDI Magic is short on keyboard substitutes for mouse and menu operations. More keyboard control would make the program faster to use and far more flexible, particularly for the experienced MIDI musician.

MIDI Magic has a few finishing touches, however, that other programs do not. Those willing to tinker with the tools selection in the Workbench Info window can customize MIDI Magic to boot up in virtually any configuration; you can select colors, clock source, screen resolution, metronome setting, default PPQN, and more. The manual is quite clear and to the point, and, although some efforts to be entertaining are cloying, its glossary of MIDI terms and an appendix with sections on troubleshooting, error messages, technical pitfalls, and a listing of program-supported MIDI specifications are helpful. Best of all, MIDI Magic is not copy-protected; the manual provides complete instructions for installing and running the program on a hard disk.

THE FINAL CURTAIN

MIDI Magic offers much that Amiga sequencers in the \$200–\$300 price range do. Professional MIDI musicians who put a premium on speed and efficiency (and not on mouse-and-menu consistency) will want to pay the price for a more advanced package, but many beginners and serious amateurs will love MIDI Magic for its power and its start-up familiarity. Finally, because Circum Design promises a patch librarian add-on module, MIDI Magic may become a one-stop MIDI solution for many Amiga musicians.

BASIC By The Numbers

Part Three of our four-part saga on data manipulation helps you find a needle in a haystack.

By Bob Ryan

72 THE STORY THUS FAR

IN THE PREVIOUS two installments of BASIC By The Numbers, you've learned to store and sort data. This month, I continue to expand the address book sample program by introducing another data manipulation technique: searching.

For newcomers, here are the two component programs of the address book application. (See January '89, pg. 24 and February '89, pg. 20 for explanations.)

```
REM Address Book Create/Input Data Program
OPEN "Address" FOR APPEND AS #1
GetData:
CLS
INPUT "Last Name (RETURN to exit): "; last$
IF last$="" THEN Finish : 'quit on NULL string
INPUT "First Name: "; first$
INPUT "Street Address: "; street$
INPUT "City: "; city$
INPUT "State: "; state$
INPUT "Zip: "; zip$
INPUT "Phone: "; phone$
WRITE #1, last$, first$, street$, city$, state$, zip$, phone$
GOTO GetData
Finish:
CLOSE #1
END
```

```
REM Address Book Read and Sort Data Program
REM File Reading Routine
OPTION BASE 1
DIM lst$(100,7) : 'limit 100 records in address book
OPEN "Address" FOR INPUT AS #1
WHILE NOT EOF(1)
  rec=rec+1
  FOR fld=1 to 7
    INPUT #1, lst$(rec,fld)
  NEXT fld
WEND
CLOSE #1
```

```
REM Sorting Routine
Bubble:
flag=0
FOR x=1 to rec-1
  IF lst$(x,1) > lst$(x+1,1) THEN
    FOR z=1 to 7 : 'If out of order...
      temp$(z)=lst$(x,z): '...swap!
      lst$(x,z)=lst$(x+1,z)
      lst$(x+1,z)=temp$(z)
    NEXT z
    flag=1 : 'set when a swap has occurred
  END IF
NEXT x
IF flag=1 THEN Bubble : 'If a swap occurred, do it again
CLS
FOR x=1 to rec : 'Display the sorted records
  FOR fld=1 to 7
    PRINT lst$(x,fld); " ";
  NEXT fld
  PRINT
NEXT x
END
```

73 THREE-PART HARMONY

ONE OF THE primary functions of an address book program is to let you find the address or phone number of a particular person. While the above program displays the address book's records sorted alphabetically, it isn't very useful for finding information about any one person, once the address book has more entries than will fit in one Amiga window. As your address file grows, you need a more sophisticated method to call up specific data.

A search routine consists of three components: an input segment where you specify the information you want, the actual search segment, and a segment that displays the information. We'll tackle each of these in order. ►

WIN A MONITERM!

Build an expert system application with the MAGELLAN™ artificial intelligence expert system building tool and win a MONITERM Viking I high resolution monitor for your AMIGA.

Imagine the possibilities: the power of the AMIGA coupled with the flexibility of MAGELLAN!

Categories for the First Annual MAGELLAN Application Contest are:

Most Productive Application

Business or Diagnostic systems, decision assistance tools for financial investment, production control systems, or inventory management systems.

Most Creative Application.

Music or Animation systems, or innovative approaches to traditional expert systems.

Most Bizarre Application.

Let your imagination run wild!

3 Grand Prize Winners will receive:

A Moniterm Monitor

A MAGELLAN Developer Package

Retail Value \$3000.

2 Runners-Up in each category will receive:

MAGELLAN Developer Package

Retail Value \$1000.

All finalists will also receive a MAGELLAN designer sweatshirt.

All entries must be received by Emerald Intelligence by June 1, 1989. Contest void where prohibited. Contest Winners will be announced at Ami-Expo Chicago in July 1989. All entries become the exclusive property of Emerald Intelligence Inc., and cannot be returned. Winning entries may be used in a promotional campaign and any entry may be included in promotional materials or application manuals. For a complete set of rules and an entry form, send a self addressed stamped envelope to MAGELLAN Contest Rules, c/o Emerald Intelligence.

Circle 174 on Reader Service card

MAGELLAN is a trademark of Emerald Intelligence Inc. AMIGA is a registered trademark of Commodore-Amiga Inc. Moniterm is a trademark of Moniterm Corporation.

The input segment of the search routine can be very simple: You prompt the user to enter the last name of the person he or she wants information about. Here is an example:

```
REM 'Search Input
SearchIn:
  CLS
  LOCATE 10,10
  PRINT "Address Book Search"
  INPUT "Enter Last Name: "; search$
```

The simplest search algorithm is brute force: You examine every record in the list until you find a match. For example:

```
found_flag = 0
FOR x=1 to rec
  IF Ist$(x,1)=search$ THEN
    found_flag = 1
    GOTO CheckFlag
  END IF
NEXT X
CheckFlag:
  IF found_flag=1 THEN
    DisplayIt : 'jump to the record display routine
  ELSE
    PRINT "Record Not Found"
  END IF
```

This routine works but it is neither efficient nor very pretty. If you have 80 records in your address book, the program will have to perform an average of 40 comparisons before it finds the proper record. To greatly decrease the average number of comparisons needed, I rely on a binary search.

In a binary search, you examine selected records that continually narrow down the number you must examine. A binary search is very efficient, but it does require that the records be sorted.

Here is how a binary search works. Let's say you have a list of 20 records and the record you want (though you don't know it) is number 14. First, you compare your search string with the record halfway down the list, namely 11. Because the search string is below record 11 alphabetically, you check the record halfway down the remainder (records 12 through 20) of the list, namely record 16. The search string is above this record, so you check the record (13) halfway between the remaining records (12 through 15). Your search string is below 13, so you move halfway down the remaining records (14 and 15) to record 14,

where you finally have a match. In your search, you've examined records 11, 16, 13, and 14, for a total of four. A brute force search of the same list will take an average of 10 comparisons.

The routine below implements a binary search for the address book program. Remember, the records are numbered from 1 to rec. The display routine follows the search routine.

```
lo=0 : hi=rec
Loop:
  lookup=lo+INT((hi-lo+1)/2)
  IF search$=Ist$(lookup,1) THEN
    GOTO DisplayIt
  ELSEIF search$ < Ist$(lookup,1) THEN
    IF hi=lookup THEN EndSearch
  ELSE
    hi=lookup : GOTO Loop
  END IF
ELSE
  IF lo=lookup THEN EndSearch
  ELSE
    lo=lookup : GOTO Loop
  END IF
END IF
EndSearch :
CLS
PRINT "No Match Found!"
INPUT "Try Again (Y/N) "; ans$
IF ans$="Y" or ans$="y" THEN SearchIn
STOP
```

```
DisplayIt:
  CLS
  LOCATE 1,10
  PRINT "The record you want follows:"
  FOR fld=1 to 7
    PRINT Ist$(lookup,fld); " ";
  NEXT fld
  PRINT
  INPUT "Search Again (Y/N) "; ans$
  IF ans$="Y" or ans$="y" THEN SearchIn
  END
```

To get everything working, add the above routine to the Search Input routine and tack the whole thing onto the end of the Read/Sort program. You now have the basic pieces of an address book application.

74 FOND FAREWELL

NEXT MONTH, in the final installment of BASIC By The Numbers, we'll add menus, a print routine, and error trapping to the program to create a finished application. ■

Face Off with "The Great One"

WAYNE GRETZKY HOCKEY™

Variable speed instant replay

Digitized fight videos!

Greatness isn't awarded, it's earned.

Wayne Gretzky has spent thousands of hours on the ice, practicing his skating, passing, and shooting skills. He's earned his reputation as the dominant force in professional ice hockey today.

At Bethesda Softworks, we've spent countless hours developing WAYNE GRETZKY HOCKEY. We've captured the strategy, the game play and the hard-hitting action of major league hockey. And we deliver a dynamic simulation that recreates the action on the ice and the strategy from the bench. From the adrenaline rush of a breakaway goal to the tension of Sudden Death Overtime, it's all here.

WAYNE GRETZKY HOCKEY.

You'll discover that we've earned our reputation too.

BETHESDA SOFTWORKS™

Creators of GRIDIRON®, the award-winning football simulation.

15235 Shady Grove Road, Suite 100, Rockville, MD 20850 USA (301) 926-8300.

Visit your retailer or call (800) 432-1988 for Visa and MasterCard orders. To purchase by mail, send credit card number and expiration date, check or money order for \$49.95 + \$3.00 shipping to: Bethesda Softworks, P.O. Box 7877, Gaithersburg, MD 20898. Allow two weeks for delivery.

Hard Times Ahead

*Greater storage capacity, efficiency, and speed make hard drives
the standard of the future. But what kind of system do you need
and how do you install it?*

By Louis R. Wallace

MUCH TO MOLLY'S DISGUST, but radio listeners' delight, Fibber McGee's closet could hold a lot, but attempting to locate one thing brought the entire contents cascading down on his head. The same applies to your desk littered with floppy disks; you know the program you need is there, but finding it means rooting through the mess.

A more efficient storage method is a hard drive. A 20MB hard drive will hold the equivalent of 20 floppy disks in one neat box. Instead of searching for separate disks, you can install frequently used software on your hard disk, then click open the programs as you need them. Accessing programs from a hard drive is also much faster than accessing them from a floppy. For disk-intensive applications, such as searching and sorting databases, spell checking large documents, creating graphics, or digitizing sound and video, you will quickly appreciate the increased speed of a hard drive. (For more details on how a hard drive operates, see the sidebar "Hard Facts.")

Purchasing and installing your first hard drive, however, presents an array of bewildering choices. What capacity do you need? What size do you buy? What interface standard should you use? How do you hook it up? Because the answers are system specific, we will concentrate on adding an internal hard drive to an Amiga 2000 running version 1.3 of the operating system.

While your Amiga comes equipped to run a floppy drive, you must buy an Amiga-specific controller card to run a hard drive. Because of manufacturing costs and expensive extras, such as autoconfig and DMA (Direct Memory Access) circuitry, the controller often costs more than a 20MB drive.

Many companies, such as C-Ltd and Supra Corp., offer turnkey hard-drive systems, containing the drive, a controller card, mounting hardware, cables, software (a hard-disk driver and installation program), and instructions. The all-in-one package is perfect if you do not want or know where to search for individual components. With all the pieces coming from the same company, troubleshooting is much easier.

If you want to get the best deal possible or a custom configuration, you can easily buy the components from different sources. While you can save money or buy more megs for the same amount with this method, you run the risk of assembling incompatible components. The best defense is to know your interface standards and your personal requirements.

HOW MUCH IS ENOUGH?

One such requirement is the storage capacity you need. Although 20MB drives are the least expensive, they have the highest cost per megabyte and fill all too quickly. While your first 20 megabytes may cost about \$500, doubling your storage to 40 megs will cost only about an additional \$100. The per-megabyte savings increase as you move up to 60MB, 80MB and 100+ MB systems, although you will probably want to draw the line on capacity somewhere. If your budget will allow it, I recommend you buy a 40MB drive at least.

ST506 vs. SCSI

All Amiga hard drives adhere to either the ST506 or the SCSI (Small Computer System Interface) interface standard. Designed for the IBM PC, ST506 ►

drives are the cheapest and most plentiful. SCSI drives cost a little more, but are usually faster than ST506 drives. Commodore's A2090A interface card supports both ST506 and SCSI drives; most other controllers support SCSI drives only. If you need the flexibility of using both types of drives, get the A2090A. If you do not need ST506 support, get a SCSI-only interface.

3½ vs. 5¼

Once you decide on a standard, consider the size of the drive—3½ inch or 5¼ inch. You must install a 5¼-inch drive in the 5¼-inch-drive slot on the A2000. This, however, prevents you from running MS-DOS programs via Commodore's A2088 Bridgeboard, because it eliminates the space for an internal IBM-compatible drive. A 3½-inch drive installed in the second floppy slot means having only one internal floppy drive, DF0:. You could add a more expensive, external 3½-inch floppy, which is called DF2: by default but which you can mount as DF1:. If you want two internal 3½-inch floppies and a 3½-inch hard drive, but no MS-DOS floppy, you can install the hard drive in the 5¼-inch slot with a mounting bracket. Radio Shack sells one for \$29.95.

DMA vs. NON-DMA

For even more speed and efficiency, consider a controller that supports DMA (Direct Memory Access), a hardware technique for high-speed data transfer

between computer memory and a device, such as a hard disk. Once the CPU has initiated a DMA transfer, transmission continues without further assistance from the CPU, meaning your Amiga can perform other functions while accessing your drive. Again, performance adds to the controller's price. If speed is a major concern, I recommend investing in a DMA controller.

REMOTE CONTROL

Version 1.3 of the operating system adds a new option—autobooting AmigaDOS from your hard drive. When autobooting, the machine executes your startup-sequence automatically from the hard disk, instead of looking for it on a floppy disk in DF0:. To autoboot from your hard drive you need Kickstart 1.3 and a controller card that supports the procedure. Because Commodore is not selling the Kickstart 1.3 ROM chip (part number 315093-02) to users, you must have a service center install it for you. Several reliable autobooting hard-drive controllers are the A2090A (Commodore), the A2000 Impact (Great Valley Products), the A2000 SupraDrive controller (Supra Corp.) and the A2000 Overdrive controller (Pacific Peripherals).

OUT OF THE BOX, INTO THE CASE

With all the components collected on your desk, you are ready to install your hard drive. The exact procedure depends on your specific controller and drive. ►

Glossary of Hard Drive Terminology

AutoConfig—a technique used by the Amiga operating system to automatically recognize and access hardware. Autoconfig devices must meet certain requirements before the Amiga can detect them.

Block—a segment of data totaling 512 bytes.

Cylinder—a group of tracks with a common track number. All the track 0's on a hard drive form one cylinder, all the track 1's make up another, and so on.

Device—is a software I/O port that AmigaDOS uses to communicate with a physical I/O port or a redefinition of how a system resource is used. For example, the **RAM:** device redefines read/write memory to be a disk drive.

Device Driver—the program and data structures necessary to make a device functional.

DMA—Direct Memory Access; a high-speed method of transferring data between RAM and

a peripheral device, such as a hard drive.

DOS—Disk Operating System; the software the computer uses to control the disk drive.

File System—a program that provides high-level access to low-level mass-storage devices.

Handler—a translator that lets you access different logical devices with the same commands, such as **RAM-Handler**, **SPEAK-Handler**, and **AUX-Handler**.

Mountlist—a text file found in a Workbench disk's **DEVS:** directory that describes devices, handlers, or file systems added to the system with the AmigaDOS **MOUNT** command.

Partition—the division of a single hard drive into two or more "logical" segments that the system refers to as if they were individual drives. Partitions are formatted independently and can each support a different disk operating system. For example, one drive could house partitions supporting AmigaDOS, FastFile-

System, and MS-DOS.

Read/Write Head—a circular piece of magnetized iron positioned above the magnetic media that is used to read or write data to the drive.

SCSI—Small Computer System Interface; a high-speed interface capable of the parallel transference of data (transferring eight bits at a time).

Sector—a sub-area of a track.

ST506—an interface that uses serial transference of data (transferring one bit at a time).

Startup-sequence—a text file that contains instructions for the Amiga to execute when it is booted. Startup-sequences are stored in the **S** directory of boot disks.

Track—one of many rings on the surface of the disk that the read/write head of the drive passes over.

Step 1. Removing the floppy-drive plate.

Step 3. Installing the hard-drive controller into the first Amiga slot.

Step 2. Installing the hard drive in the 5 1/4" mounting bracket.

Step 4. Attaching the power and data cables to the hard drive.

Hard Facts

A **HARD DRIVE** is a mass-storage device onto and from which your Amiga can store and retrieve information. Conceptually, a hard drive is similar to a floppy drive. Both contain rapidly-spinning (3600 revolutions per minute for a hard disk, 300 rpm for a floppy) magnetically-coated disks that hold information.

Hard drives offer higher storage capacity and data-transfer speed, however, making them more desirable and expensive than floppy drives. Capacities range from 20 megabytes (the equivalent to over 20 Amiga floppies) to over 130 megabytes (as much as 150 floppies). Of course, hard storage costs more than floppy

storage. A 20MB system costs \$400–\$600 (or about \$25 per megabyte), while 20 floppies at a total cost of \$40 represent a cost per megabyte of only \$2. The more hard storage you buy, however, the less you pay per megabyte. A 40MB system at \$700 means the per-meg price drops to \$17, while an \$800 60MB system brings that price down to \$13.

Although storage capacity is easy to measure, hard-drive speed is more complex. One aspect of speed is *seek time*. When you want to read or write to the drive, the computer's disk operating system (DOS) determines the proper track and sector on the disk and moves

the drive's read/write head to that location. The amount of time required to move the head is called seek time. A better way of measuring drive speed is with *access time* (measured in milliseconds), the average amount of time that elapses between the computer's request for data transfer and data's return. Hard-drive manufacturers usually quote the access time.

How the hard-drive interface sends the data from the drive to the computer affects the drive's speed. ST506 drives send information one bit at a time, while SCSI transfers a full byte at a time. The SCSI method is usually the faster. □

—LRW

Care and Feeding

THE TWO BIGGEST problems for hard-drive owners are direct opposites—loss of data and data buildup. Unless you take the proper precautions, you could lose all your data in a disk crash, or you could waste access time while your disk searches through unnecessary files. The best way to avoid these situations is to prepare yourself against them.

Hard drives are powerful, but not indestructible. If you make a mistake, software corrupts the drive, or the hardware breaks down, you will lose your data. The golden rule is: Always back up your data onto floppy disks. You should back up your data files after every computing session. While you can recopy programs from their original disks, data can be lost for good if you do not save it regularly. Because backing up the entire drive is time consuming, you need to do so only once a month.

If your data files are few and small, you can back them up using the Workbench or CLI. Use Duplicate for the Workbench menu to make a copy of the files, then drag the icons into the floppy disk's window. From the CLI,

use the COPY command.

This method quickly becomes time consuming when you have enough files to fill one or two floppies. A better alternative is to batch copy files with a directory utility program, such as CLImate, DiskMaster (both from Progressive Peripherals & Software), and DirUtil (public domain). These programs let you copy groups (batches) of files, such as entire directories, with a single command.

If you have megabytes of data to back up, you should invest in a more sophisticated backup program, such as QuarterBack (Central Coast Software), or a tape backup system, such as C-Ltd's. The programs allow you to copy the entire contents of your hard drive to floppies. Once the process is started, all you have to do is supply fresh floppy disks when prompted. Be prepared, a 20MB drive will require about 25 floppy disks to store all the data, and it will take you one to two hours to make the backup. With a tape backup system you can copy the contents of large hard drives to magnetic tape for archiving or safeguarding far faster and more

easily than you can back up to floppies. The drawback is that tape drives are expensive, sometimes rivaling hard-drive costs.

NEAT-NIK

Just as backing up your drive will rescue you from disaster, keeping it organized will save you from frustration. New hard-drive owners often use only a few directories to store a vast array of data. Besides making it difficult for you to find anything, it slows down your drive, as the computer must search through the clutter for your requested data.

To keep your drive as efficient as possible, keep it organized. Make your root directory lean. Keep only what you need in it, with the rest in subdirectories. A good guideline is no more than 20 to 30 files per directory. Organize your files and programs under common themes—graphics, word processing, games, and so on. Delete files you do not need. Some disk utilities, such as CLImate and DiskMaster, offer house-keeping routines to make the process easier. □

—LRW

What follows is a general guideline; always consult the installation instructions accompanying your system.

If you choose an ST506 system, check your hard disk and its packaging for a chart of the disk's bad sectors (if any). If the values are listed on the drive, copy them into a notebook; the installation software may request them.

To physically install the drive, turn off your system and remove all the connecting cables. To open the A2000's case, remove the two screws on each side and the top, center screw in the back.

To install a 3½-inch drive, remove the two screws on each side of metal plate to which the floppy drives are attached. Carefully lift up the plate, with the floppy drive still in place, and find the screw holes in the plate for your hard drive. Attach the drive, and screw the plate back in place.

To install a 5¼-inch drive, simply slide it into the bottom slot, align the holes on the side, and insert the mounting screws. If your drive has a faceplate (usually black plastic with an LED), make sure it fits flush with the case before tightening the screws. If your drive will activate the hard-disk light on the front of the A2000, attach the LED wire and leave the A2000's faceplate in place.

After installing the drive, connect it to the power supply by plugging one of the Amiga's large four-pin plastic connectors to the drive's connector.

Now, install the drive controller. Usually, you can

house the card in any Amiga slot, but inserting it into the first slot makes connecting the cables easier. Be careful not to put your controller into the 86-pin CPU slot. Follow the controller's instructions to connect the drive cables. With all your new equipment in place, reassemble your system.

You are now ready to prepare your drive, mountlist, and startup-sequence for use. Again, the exact process is system specific. Some controllers come with software that automatically prepares, formats, and partitions the drive, alters the boot disk's mountlist and startup-sequence, and copies any necessary files. Others may come with printed instructions only. For example, the software accompanying Commodore's A2090A board prepares and formats the disk; you follow the instructions and answer the prompts.

If you wish, under version 1.3 of the operating system, you can install a hard-disk partition that employs the FastFileSystem (FFS)—a new, faster, and more efficient method of using a hard drive on the Amiga. Unlike the older AmigaDOS file system (which was not designed for use on a hard drive), FFS stores only data in the disk's data blocks. Because FFS stores data on consecutive blocks when possible, it is able to read and write data significantly faster (about 300%) than the old file system. The method also lets you store about 50K more data per megabyte, giving you about 5% more usable storage space. FFS is so fast that the limiting factor in the data transfer rate ►

zo·ë·trope (zō'ə trōp)

n. [irreg. f. Gr. *zoe-*, life + *tropos*, turning] 1. a device that gave static images an illusion of motion. Known as the "wheel of life", the zoetrope brought the magic of animation to the parlours of the mid-1800's. 2. a new state-of-the-art advanced animation system for the Amiga® computer from Antic Software.

Now! The program you've been hearing so much about... Zoetrope puts you right on the cutting edge of animation.

Its high end features satisfy even the most demanding of professional users. Its unique layered structure makes it easy-to-use for the casual animator.

Bring your imagination to life with Zoetrope: the faster way to animate.

Now with Zoetrope, The Animation System™, you can create magical motion.

Here are just a few of Zoetrope's exciting, advanced features:

- Spin and swoop titles and images through 3D space.
- Apply computer power to classic "cel" animation.
- Overlay and underlay (compositing) your favorite pictures or animations.

Taking animation into the 21st Century

MM8AW3

between the Amiga and hard disks now is dependent upon your specific drive and controller, and not on the file system. For the best performance, get a fast hard disk with a DMA controller.

Because FFS cannot be used on the first hard-drive partition (the first partition must be standard AmigaDOS), the setup procedure for an FFS partition is more involved than standard hard-drive software installation. First, you must install the device driver (supplied with your controller) in the Expansion drawer on your boot disk. For the A2090A controller, the files are called HDDISK and HDDISK.INFO. If the controller's installation software does not copy the driver to the Expansion drawer, use the Workbench or CLI to do so. Next, you must prepare the hard drive. For the A2090A, use PREP, the supplied utility program. When running programs such as PREP on a drive intended for use with FFS, keep the normal AmigaDOS partition small. When PREP prompts you for the HIGHCYL of the first partition, you should enter the number of the cylinder you want to be the last one in the small AmigaDOS partition, not the last cylinder on the disk. In the example mountlist below, the FFS partition starts at cylinder 29; therefore, when I used PREP on my drive I set the HIGHCYL of the AmigaDOS partition to 28. After preparing the AmigaDOS partition, reboot your Amiga.

The next step is to add an entry for an FFS partition into your mountlist file (located in the DEVS: directory of the boot disk) using ED or some other text editor. The FFS mountlist entry below is for a 40MB drive. Cylinders 0 and 1 are reserved for system use. I used PREP to create the first partition, called DH0: in cylinders 2 through 28, about one megabyte. The remaining 39 megs will be used for FFS.

```
FS1: Device=hddisk.device
    FileSystem=:FastFileSystem
    Unit=1
    Flags=0
    Surfaces=4
    BlocksPerTrack=17
    Reserved=2
    Interleave=0
    LowCyl=29 ; HighCyl=1223
    Buffers=40
    GlobVec=1
    BufMemType=1
    Stacksize=4000
    DosType=0x444F5301
```

#

To make sure that the hard-disk device driver is recognized by your system, open a Shell or CLI and type:

```
BindDrivers
```

The Best.

No Matter
How You
Stack 'Em.

No matter how you stack 'em, SupraDrives are the best. The best performers. The best designs. The best fit for your system.

And frankly, the best choice you could make, no matter how you stack your options.

Only Supra offers you complete SupraDrive Hard Disk Systems for the Amiga 500, the Amiga 1000, and the Amiga 2000 in various capacities and forms. You can get external drives, internal drives, interface kits, and RAM expansion kits. You can get drives ranging in size from 20MB all the way up to 250MB. Whatever your system configuration and needs, you can get a Supra hard disk that's just right for YOU.

And if what you need is backup or unlimited storage, you can get the SupraDrive FD-10, a new concept in mass storage that combines the best features of hard disks and floppy disks. The SupraDrive FD-10 lets you store a full 10MB of data on one floppy disk and then easily take the disk with you anywhere. Your storage capacity is limited only by the number of disks you have, and backups are quick and easy.

When you buy your new disk drive from Supra, you'll be buying from a company that has years of experience to share with you and the stability to ensure that they'll be around when you need it. Only Supra Corporation offers you state-of-the-art, innovative technology plus experience and service you can count on.

SupraDrive Interface
for the Amiga 2000

Call your local dealer or:

1-800-727-8772 (Orders Only) or 503-967-9075
1133 Commercial Way, Albany, OR 97321
Telex: 5106005236 (Supra Corp.)
FAX: 503-926-9370

Now, you must format the drive. Because PREP automatically mounts the first partition, you do not have to mount DH0:. To format the first (AmigaDOS) partition, simply type:

FORMAT DRIVE DH0: NAME "SLOWHD"

The first partition, cylinders 2 through 28, will be formatted under AmigaDOS.

Before formatting the FFS portion, you must mount it. To mount the FFS partition, type:

MOUNT FS1:

Next, you format the FFS partition by typing:

FORMAT DRIVE FS1: NAME "FASTHD" FFS

When the formatting process is complete, you should copy all the files on your Workbench 1.3 disk to the FFS partition, using the command:

COPY DF0: FS1: ALL

Now, edit your startup-sequence (in the boot disk's S directory) so it will mount the drive when you boot. For example, I added the following lines to the beginning of my startup-sequence:

```
system/fastmemfirst
BindDrivers
```

mount FS1:

FS1:c/assign c: FS1:c

FS1:c/assign sys: FS1:

FS1:c/assign l: FS1:l

FS1:c/assign fonts: FS1:fonts

FS1:c/assign devs: FS1:devs

FS1:c/assign libs: FS1:libs

FS1:c/assign s: FS1:s

FS1:c/assign system: FS1:system

The first command runs the FASTMEMFIRST utility, which forces the Amiga to use fast memory if it is present. BindDrivers looks in the boot disk's Expansion drawer to find the hard-disk driver, then loads the driver into memory. Next, using the 1.3 MOUNT command, it mounts the FFS partition. The system now will recognize the existence of the FFS partition so you can use it. Because I have a copy of all my Workbench files and directories on FS1:, I then assign all of them to it so it becomes my default drive. Now all access of my System files will come from the hard disk.

When you reboot you will be using the new Fast-FileSystem as your default drive. (See "Care and Feeding" (p.26) for hard-drive handling hints.) ■

EASYL™

THE HUMAN TOUCH

The EASYL graphics tablet, a natural extension of your pen or pencil, is the simplest and most intuitive way to put your ideas into the Amiga. Whether you are an artist, animator, designer or engineer, EASYL quickly draws your attention to its' power, precision, ruggedness and ease of use.

Once installed in your Amiga 500, 1000, or 2000, EASYL is ready to work with Deluxe Paint, Draw Plus, Photon Paint, Express Paint, Professional Draw, plus many other popular graphics programs. No matter what the job, EASYL is just a pen stroke away. EASYL also leaves your mouse active and the mouse/joystick, serial, and parallel ports free for other uses. For a powerful way to express yourself on your Amiga, pick up the EASYL pressure sensitive graphics tablet. Chances are you won't put it down. Contact your Amiga dealer for a free demonstration, or contact one of the addresses below.

EASYL is also available for Commodore PC/XT/AT and compatible computers. EASYL technical support is available on BIX.

AGA 2000

The flickerFixer™

UNLOCK THE GRAPHICS POWER OF YOUR AMIGA 2000!

flickerFixer is an advanced graphics adaptor that eliminates your Amiga 2000's interlace flicker and visible scan lines. The result: superior quality color or monochrome graphics and text — for such demanding applications as CAD/CAM, Desktop Presentation, Graphic Design, Animation, 3D Modeling, Video, and Word Processing.

flickerFixer upgrades the Amiga 2000 with a flicker free 4096 color palette, has an overscan mode that features a screen size of 704 x 470 pixels and drives most of the popular PC Multiscan and VGA monitors, including the NEC Multisync and Mitsubishi XC1429C.

Accolades include: **Best of 1988 Award**, Commodore Magazine (12/88); **#1 Reader's Choice Award**, AMIGAWORLD (12/88); **"The display is fantastic . . . It is the best display we have ever seen on any computer system."** Amiga GURU (5/88)

flickerFixer fits into the Amiga video slot, is fully compatible with all software, and does not modify the standard Amiga video signals. For more information or to order, call MicroWay Sales at (508) 746-7341 or your Amiga Dealer. Priced at \$595, **flickerFixer** is made in the USA and is FCC Class B approved.

MicroWay . . . Respected throughout the industry for high quality engineering, service and technical support.

The *AmigaWorld*

Hardware

Buyer's Guide

DO YOU SUFFER from Just-One-More-Device Syndrome? The symptoms are easy to spot. Does your car's dashboard look like a 747's? Is your stereo system slowly taking over the entire living room? Have the electrical outlets in your kitchen been condemned for overcrowding? Most importantly, is the combined worth of your computer, peripherals, and expansion devices threatening to surpass the value of your house?

Well, maybe you don't mind, and believe that "More is better." Or, perhaps like the sailor, you subscribe to "A device in every port," or, like the politician, "A chicken in every slot." In any event, we've compiled our annual smorgasbord of delectable chips and wire—The *AmigaWorld* Hardware Buyer's Guide—to satisfy your cravings. As always, the selection is extensive and varied. We have disk drives and controllers, memory-expansion boards, graphics, video, and music devices, networking equipment, and a whole lot more.

A few translations to make your selections easier: The Bus refers to the side expansion bus on the A500

and A1000, and Slot to an internal slot on the A2000 or a slot in an expansion chassis off the bus. Motherboard refers to the Amiga's main internal board; Mouse, Serial, Parallel, and RGB to the rear ports of the same name. External drive denotes disk-drive port, and Internal drive, the disk-drive cavity on the A2000. Internal refers to the expansion bus on the A500's underside. The letters (PT) in the Port column indicate pass-through, meaning you can attach other products to the peripheral.

We have listed only items that are or will be available by March 1, 1989. If the manufacturer has decided on a release date but not on a price, we listed TBA (To Be Announced) in the Price column. (Remember also, all prices are approximate. As the cost of chips and components fluctuate, so will the cost of hardware.)

Products are presented alphabetically within each category by name of product, followed by the name of the manufacturer. Consult the "Company List" at the end of the guide for further information about the manufacturer's address and telephone number. ►

Escort Hard Drive Systems	Expansion Tech.	\$335.00	500, 1000	Bus	SCSI DMA controllers, autoboot ▶

A CATACLYSMIC STRUGGLE BETWEEN GOOD AND EVIL

For the first time, Tolkien's panoramic vision of the cataclysmic struggle between good and evil has been skillfully crafted into a single computer game of epic proportions.

FIVE MAN YEARS of detailed research and programming have been invested to ensure that this is the "definitive Tolkien computer game." Selected elements of traditional Fantasy Role Playing, War strategy, and animated adventure games have been skillfully blended for a unique computer gaming experience.

Follow in the footsteps of Frodo, Aragorn and Gandalf as they battle to get the ring to the Cracks of Doom. Ranged against you are all the evil forces of the Dark Lord Sauron and the corrupt wizard Saruman. The odds are overwhelming, but you cannot afford to fail. The destiny of Middle Earth lies in the balance.

Roam at will across the 36-screen scrolling map of Middle Earth, wherein are contained thousands of digitized locations in which you can control a cast of over 80 animated characters and armies. Test your strategic abilities as you command entire legions to move against the forces of evil.

With the almost infinite variety and multiple layers of play, War in Middle Earth is a game you can finish in days or weeks, or savor for months. It will delight and enthrall, and ultimately become a firm favorite in any software library.

May your heroic efforts be met with success, and the forces of darkness be vanquished!

J.R.R. Tolkien's

FORMS IN FLIGHT II

The new Forms in Flight II is the missing link for your Amiga three dimensional graphics design and animation. Create fast, high quality images with fancy curves and curved surfaces. Then use the complex objects you design to create smooth animations. You can also import objects from other animation programs using Interchange by Syndesis.

+

=

- ✓ Surface Patches
- ✓ Phong (Smooth) Shading
- ✓ Texture Mapping
- ✓ Extrusions along curved paths
- ✓ Hierarchical animations using paths
- ✓ Supports overscan and PAL systems
- ✓ Low price: only \$119
- ✓ Many more features

Make Your Disks Fly with.....

Mediaphile VHS	Interactive Micro.	\$5592.00	NA	NA	JVC VHS video deck and Amiga computer system
Perfect Vision	SunRize	\$249.95	All	Parallel	Real-time black-and-white video digitizer
ProGEN	Progressive Periph.	\$449.95	All	RGB (PT)	Genlock with software, broadcast quality RS 170A
Pro. ScanLab	ASDG	\$995.00	2000	Slot	Interface for Sharp JX-300 and JX-450 color scanners
ScanLab/100	ASDG	TBA	All	Parallel	Interface for Sharp JX-100
Scanner Interface Package	Gold Disk	\$1195.00	All	Parallel	Canon IX12 300 DPI scanner with interface
Super Gen	Digital Creations	\$749.95	All	RGB (PT)	Genlock, broadcast quality, allows fade in and out
V-I 2000	Creative Micro.	\$79.95	2000	Video slot	Connects Commodore 1702 monitor; \$99.95 with RF
V-I 500	Creative Micro.	\$79.95	500	RGB	Connects Commodore 1702 monitor; \$99.95 with RF
VD I	Impulse	\$1000.00	All	Parallel	Real time video digitizer and 24-bit frame buffer ►

HardFrame/2000

The Super-Speed, DMA, SCSI Hard Disk Interface for the Amiga® 2000

How fast is *fast*? HardFrame/2000 transfers data at Amiga bus speeds! It's actually faster than the hard disk mechanism itself! And even more important in the Amiga's multitasking environment, HardFrame/2000 has extremely efficient DMA circuitry to get on and off the bus in almost no time at all: 280ns to get on; 200ns to get off. And it's true, dedicated DMA, too! HardFrame/2000 autoboots *and* automounts *directly* into the AmigaDOS™ 1.3 Fast File System (old file system partitions are *not* needed!). The core of any DMA SCSI interface is in its SCSI protocol chip and DMA chip. MicroBotics has chosen the new, high performance Adaptec AIC-6250 SCSI chip, capable of up to 5 megabytes per second raw transfer speed, and the Signetics 68430 DMA chip running at 12.5 megahertz. Then we added additional FIFO buffering and enabled 16-bit wide data transfers for maximum throughput. The sophisticated design of HardFrame/2000 provides for automatic SCSI arbitration, selection and reselection. The hardware supports either synchronous or asynchronous data transfer. HardFrame/2000 can function as either the SCSI bus initiator or the target and can reside in a multiple master environment. Physically, HardFrame/2000 is optimally flexible: the compact, half-size card comes attached to a full length, plated aluminum frame. The frame has mounting holes positioned to accept standard, 3.5" SCSI hard disk units such as those manufactured by MiniScribe, Seagate, Rodime, and others (hard disk mechanisms must be supplied by the user or his dealer as a separate purchase item). Alternatively, you can cable-connect to a SCSI drive mounted in your Amiga's disk bay or in an external chassis. As many as seven hard disks may be connected to a single HardFrame/2000. There is no size limit on each disk. HardFrame/2000 includes a 50-pin SCSI cable and header connectors for either 50-pin or 25-pin cable connection. Also included is a current tap to power frame-mounted drives directly from the slot itself. HardFrame/2000 comes complete with driver, installation, and diagnostic software.

Available NOW! Suggested list price, \$329 (hard disk not included)
Frameless version: \$299.00. See your Amiga Dealer.

The HardFrame/2000 photo shows the product with a MiniScribe twenty megabyte hard disk installed. Hard disks are *not* included in the purchase price of HardFrame. Note that if placed in the first slot, HardFrame uses only one slot even with a disk attached.

MicroBotics, Inc.

Great Products Since the Amiga Was Born!

811 Alpha Drive, Suite 335, Richardson, Texas 75081 (214) 437-5330

- **Power Cabling Directly from Card to Disk**
- **50-pin Cable Included**
- **Supports up to seven SCSI hard disks of any size**

New!

8-UP! (DIP) FastRAM

Another great memory board from MicroBotics, 8-UP! (DIP) is the "brother" of the original 8-UP! (which uses SIMMs and PopSIMMs to fill its memory space). 8-UP! (DIP) uses conventional 1 megabit RAM chips in standard sockets to provide your Amiga 2000 with 2, 4, 6, or 8 megabytes of autoconfiguring FastRAM! 8-UP! (DIP) is a super efficient CMOS design for lowpower consumption and high reliability. Suggested list price, \$199 (0k installed)

"The Bolshoi is a great theatrical machine with a unique history...the most popular ballet company of modern times." *Mindy Aloff, DANCEMAGAZINE.*

"Stolichnaya is Russia's top drawer vodka." *Robert Jay Misch, Leading wine & spirit critic.*

"When I first played Tetris I knew it was a winner. It was addicting, compelling, and fascinating in its sheer simplicity." *John C. Dvorak, PC Magazine.*

What are the Three Greatest Things to Come Out of the U.S.S.R.?

The **Bolshoi ballet** may not be your choice of entertainment, but there must surely be an appreciation for the exceptional talent, style, and grace of the artists.

And perhaps you have never tasted the smoothness of **Stolichnaya**, made from rich grain and distilled in the centuries old manner that makes it Russia's finest vodka.

But Spectrum HoloByte brings yet a third selection in products from the U.S.S.R. destined for greatness – **TETRIS**, the Soviet Challenge in computer software. Indulge yourself in this latest Soviet export to the West. Don't miss the opportunity to experience this intriguing game which was designed and programmed in the Soviet Union. The reviewers love it and you will too! Tackle the challenge of the four squares as you test your speed and agility. Set against a background of beautiful Soviet scenery, it's an absolute delight!

TETRIS is available on most machine formats.

The Winner-Aztec C

1988 AmigaWorld Reader's Choice Award for Best Development System.

No wonder Aztec C is the system of choice for Amiga C programmers. Aztec C is lean, mean and built for speed. Aztec C provides all the tools you need to compile, optimize and debug your code into the tightest, fastest-running code possible.

"While it was not the first C language development system for the Amiga, Aztec C quickly developed the reputation as the best. In head-to-head tests against Lattice C, Aztec C consistently took less time to produce shorter object code."

	<u>Aztec C</u>	<u>Lattice C</u>
Documentation	8.8	7.0
Flexibility	8.6	7.3
Advanced Features	9.8	8.7
Overall	9.03	7.67

(Quotation and table reprinted with permission from 1988 AmigaWorld Reader's Choice Awards Announcement).

Aztec C Development tools for every need.

Item Number	Description	Unit Price
G05P	Aztec C Professional System	\$199.00
G05D	Aztec C Developer System	\$299.00
G05SDB	Aztec Source Level Debugger -SDB	\$125.00
G05SP	Aztec C Developer System + SDB	\$399.00
G05LS	Aztec Amiga Library Source	\$300.00
G05K	Aztec C Developer System + SDB + Library Source	\$724.00 Special \$474.00

All development systems include optimized C compiler, editor, 680x0 assembler, overlay linker, librarian plus extensive runtime library support.

3W ANNOUNCES LIGHT DIVISION

The near future and Iran has closed the Strait of Hormuz. President Bush sends in the 29th Light Division to preserve the West's vital oil link.

Your mission is to open the Strait, keep it open, and fend off counter attacks from Iranian and possibly, Soviet forces.

Based on the 3W board game designed by award-winner, Joe Balkoski.

Light Division Computer Game - \$40.00
(Amiga, IBM, ST, and Macintosh)

This computer version is the first in a series of board game conversions which will include *Tomorrow the World*, *Decision at Kasserine*, and *Forward to Richmond*. These games will take full advantage of each system's memory, graphic and sound capabilities.

HIGH ON THE HOG

Although current Amiga paint programs may be a long way from state-of-the-art when it comes to HAM display mode, three promising graphics packages have taken the crucial first steps in exploiting the full color capabilities of the Amiga.

3 HAM Paint Programs For the Amiga

AS REMARKABLE AS some paint programs are in tapping the awesome graphics capabilities of the Amiga, they still point up a frequent and frustrating phenomenon concerning the entire Amiga market: Software development has yet to take full advantage of the technological possibilities offered by Amiga hardware. If the Amiga is capable of displaying a full 4096 colors in excellent resolution, then what is the benefit of being able to work with only 16 or 32 colors (or even 64 in Halfbrite mode) under the limitations of current Amiga software?

HAM (Hold-and-Modify) display mode offers a way out of that bind, and at least three paint packages—Digi-Paint (NewTek), Photon Paint (MicroIllusions), and Deluxe PhotoLab (Electronic Arts)—have endeavored to deliver on the promise of displaying and manipulating all 4096 Amiga colors simultaneously. (For an explanation of the HAM display mode, see “HAM: Color By The Numbers,” p. 51.) Indeed, all three programs, to varying degrees, will render beautiful, detailed images in dazzling colors.

Before proclaiming the advent of a new Renaissance, however, be prepared to make some significant trade-offs for all those gains in color and apparent resolution. While the Amiga has the hardware to execute HAM, the software needed to work the HAM mode properly is lengthy, complicated, and must perform many calculations. Thus, HAM programs are extremely memory-intensive (you definitely will need a megabyte of RAM or more). In addition, HAM mode software is characteristically slow. Some routines take so many calculations that real-time operation is impossible.

Still, all three of these programs go a long way towards further realizing the graphics potential of the Amiga. Interestingly, each of their developers has very different intentions regarding the use of its package. For instance, where Photon Paint is designed primarily to support the freehand artist, Deluxe PhotoLab may be of greatest help to the videographer, with Digi-Paint trying to do a balancing act between the two. With this in mind, let's see how these three contenders for the HAM market stack up ►

By Bruce Jordan

User-Interface screens from the three paint programs. From top: Digi-Paint, Photon Paint, and Deluxe PhotoLab.

against each other when compared in five critical areas essential to the operation of any good graphics package.

Five Critical Tests

1. SCREEN LAYOUT

Choices as to the layout of the screen among graphics programs can mean the difference between creative joy and irritating tedium. Bad positioning of tools and palette in a computer graphics package is like trying to paint while someone stands between you and your canvas. While none of our HAM trio is a real clunker on this score, some of the programs offer a more intuitive approach to screen layout than others.

Digi-Paint positions the toolbox, color controls, and HAM palette windows at the bottom of the screen. This turns out not to be the best choice. Instinctively, it makes the toolbox feel like a barrier, because you find yourself constantly closing and then reopening the toolbox to work with the lower third of the screen.

Both Deluxe Photolab and Photon Paint use smaller scale toolboxes and position them at the top border of the screen. This arrangement allows for more free drawing space. Both packages display only a 16-color palette, leaving the color controls and HAM palette hidden until needed. Photon Paint's switchblade-like extended toolbox opens or closes the color controls and HAM palette at the click of a gadget. Deluxe PhotoLab, on the other hand, addresses the problem of screen space by locating all color controls and the HAM palette on a completely separate screen. This turns out not to be a very satisfying arrangement, as we shall see later.

2. SURFACE TONE AND TEXTURE CONTROLS

To achieve the greatest range of effects, graphics software must support routines providing adequate control of the tone and texture of plain, painted surfaces. This is especially true in HAM mode. Without these tools you have little more than an expensive electronic coloring book. Unfortunately, none of our three programs is outstanding in surface-texture control.

Both Digi-Paint and Deluxe PhotoLab offer an automated shading feature, controlled by a gadget, that allows you to position a single highlight and to set the degree of dithering (the mixing of finely interspersed pixels of different colors) used in the shading effect. While these functions are adequate for simple, geometric shapes, for more complex shapes—say, a flowing ribbon—they produce inaccurate results.

Deluxe PhotoLab also offers a gradient fill with dithering control. This allows an area to be filled with a spread of color. While this is an interesting effect, it is not much more useful than the automated shading tool.

Of the three packages, Photon Paint's Blend feature allows the best control. Instead of providing a single, simple highlight, Photon Paint enables you to set ►

HAM: Color By The Numbers

UNDERSTANDING HAM (Hold-and-Modify) mode requires a grasp of how your computer displays graphics in any mode. Any Amiga graphics display is defined in a bitmap—a set of rectangular planes of bits found in the Amiga's graphics memory. Normally, the Amiga display system determines the color of a particular pixel by stringing together the corresponding bits from the planes of the bitmap and using the resulting number as a pointer to one of the 32 Amiga color registers. The registers contain 12 bits of information (four bits each of red, green, and blue information) that determines the actual color of the pixel. The registers can be set from any program.

In HAM mode, this straightforward arrangement is altered. A HAM display uses six bitplanes, with the bits in bitplanes 5 and 6 having a special function. If the bits from bitplanes 5 and 6 for a particular pixel are both 0, then HAM mode uses the bits from the first four bitplanes to point to a color register (0–16), just as the normal Amiga display modes do. It is when one or both of these two special bits are set to 1 that HAM differs from normal Amiga display methods.

The color of a pixel in a HAM display depends upon the color of the pixel to its left. In HAM mode, two of the three color values that make up a pixel are held constant—they are the same values used by the previous pixel—while the third color value is determined by the corresponding bits in bitplanes 1 through 4. The color values that are held, and the one that is modified, are determined by the values of bitplanes 5 and 6.

If the bit in plane 5 is 1 and the bit in plane 6 is 0, the red and green values of the previous pixel are held while the bits in planes 1 through 4 are used as the current pixel's blue values. If the bit in plane 6 is set to 1 while the bit in plane 5 is 0, the blue and green values of the previous pixel are held and the bits in planes 1 through 4 determine the red value of the current pixel. If both bits in planes 5 and 6 are set to 1, the red and blue values of the previous pixel are held and the bits in planes 1 through 4 define the green component of the current pixel.

Using this method, programmers can display all 4096 Amiga colors at the same time. Because it takes more calculations to determine the color values of a HAM pixel, and because the colors of HAM pixels are not mutually exclusive, it takes much more time to create and update HAM images than normal Amiga images. On the plus side, HAM images are often more lifelike and striking than standard images because of the wide range of colors available. □

—Bob Ryan

Figure 1. A Standard Amiga Graphics Display. Corresponding bits from the bitplanes (A) that define the picture are strung together to form a five-bit binary number (B). This number—translated here (C) into decimal—points to an Amiga color register. The color values in the register are output to your monitor (D).

Figure 2. A Hold-and-Modify Display. The corresponding bits from planes 5 and 6 are examined (A). Based upon these bits, the blue and green values of the previous pixel (B) are held or repeated, and the red value of the new pixel is taken from bitplanes 1 through 4 (C). The resultant color values are output to your monitor (D).

shading profiles in both horizontal and vertical directions. This allows for complex, multiple-highlight positioning, giving images the look of being illuminated simultaneously from several different directions. Photon Paint even offers a plaid shading pattern, which can be used to quite interesting effect.

3. RESOLUTION AND SPEED

All three programs suffer, to some degree, from the inherent slowness of working in HAM mode. With the numerous lengthy and complex calculations necessary for HAM, the programs require a great deal of time to achieve their colorful effects.

In the speed category, Digi-Paint is painfully slow, allowing no real-time drawing. For instance, rendering something as simple as a quick squiggle produces a Wait requester while Digi-Paint decides where to place the color. Digi-Paint also suffers from severe HAM stepping errors: thin borders of inaccurate color around drawn shapes. These arise as a result of the inability to change more than one color value at a time when working in HAM mode.

Photon Paint is fast enough to perform real-time, freehand drawing, but when it comes to many of its other features, it still leaves much to be desired in terms of speed. For instance, cutting out a custom brush or performing a fill produces the dreaded Wait requester, as Photon Paint takes a detour through calculation land. Photon Paint also has its own share of stepping errors, although these are not nearly as bad or as frequent as with Digi-Paint.

Deluxe PhotoLab is the winner in the categories of both speed and resolution. Drawing is in real time, and most of its other features are executed reasonably quickly. Stepping errors are virtually nonexistent. In addition, PhotoLab functions in all of the Amiga's resolution modes, allowing you to draw in a lower resolution, with the same ease and speed you might with DeluxePaint (albeit, a rather limited version of DP), and then convert your picture into HAM mode for further detailing.

4. THE PALETTE

Obviously, the control of color is important to any good paint program. With HAM's 4096 possible colors, such control becomes absolutely crucial. All three packages display a standard palette of 16 predefined colors, but only Digi-Paint and Photon Paint

offer the 4096-color HAM palette windows on the main drawing screen. Choosing a custom color with either of these packages is as simple as pointing and clicking on a particular color within the rainbow-like HAM palette windows, or fiddling with the RGB controls. Photon Paint offers additional color mixing via its HSV (Hue, Saturation, and Value) controls. Photon Paint also allows for the creation of color spreads, while Digi-Paint does not.

Deluxe PhotoLab provides a completely different color-control strategy. In HAM mode you are presented with a palette consisting of only the 16 predefined colors. If, however, you wish to change colors, to create a spread of colors, or to access the HAM palette windows, you must close the drawing screen, or pull it down out of the way, in order to access the Color Control screen. Unfortunately, this design could force you to mix your colors while much of your artwork is out of sight—rather annoying when you are trying to get just that perfect shade of some particular color.

5. CUSTOM BRUSH CONTROL

The custom brush serves the same purpose in computer art that stencils, templates, and drawing guides serve in more traditional art. With few exceptions, each package has its own particular ideas on custom-brush support. All three packages, of course, allow brushes to be saved to disk.

Digi-Paint allows you to either cut out a brush freehand, using a scissors icon, or to grab a brush using any one of its various shape-making tools: square, oval, circle, and so forth. Once you have your brush, it can be stamped on the screen and used with the various color-modifying functions, including tint, add color, subtract color, and blend, to name only a few of the many functions available. Digi-Paint does not, however, allow you to hold down the mouse button and actually draw with your custom brush.

Although Photon Paint also limits you to the rubber-stamp approach when working with custom brushes, it does provide several innovative tools for modifying custom brushes. You can automatically wrap your custom brush onto a number of predefined shapes—cylinders, cones, spheres, and a variety of cubes—and you can even wrap brushes around user-defined shapes. In addition, you have control over the direction and intensity of the apparent light source illuminating your custom brush. Photon Paint also allows custom brushes to be tipped by controlling the pitch, roll, yaw, and apparent distance of the brush from the observer.

Deluxe PhotoLab allows freehand cutting of custom brushes, as well as the standard rectangular cutout; it is the only package of the three that allows you to actually draw with a custom brush in HAM mode. The process, however, is so impossibly slow (we're talking snail's pace here), that it is surprising Electronic Arts ever decided to support this feature in the first place. Another unique PhotoLab feature ►

Amiga Makes It Possible...

Desktop Video.

Studio quality video production on a desktop. The Amiga makes it possible. The **SuperGen Genlock** makes it happen!

Video Professionals understand the power the Amiga Computer brings to the industry and the potential it has for enhancing their work. With its revolutionary hi-resolution graphics and processing power, the Amiga represents a sophisticated video production solution.

The **SuperGen Genlock** and overlay device is the link between the Amiga's video potential and your own video productions. SuperGen allows you to create and produce **professional broadcast quality video** with special effect graphics and titles created on your Amiga.

Since **SuperGen** does not distort incoming video, the quality of the video out equals the quality of the video in. **SuperGen** does not decode and then re-encode the incoming video; it simply encodes the Amiga's RGB signal into RS-170A and then overlays the encoded signal onto the incoming video.

Some SuperGen™ features:

True Broadcast quality video output.

Real RS-170A. No ifs, ands, or buts! Accurately locks to non-time base corrected signals such as VCR output. Very accurate RGB encoder for true Amiga graphic colors.

Two independent dissolve controls.

SuperGen is the only genlock with dissolve capabilities built-in! Two slide pots control the mixture of external video and Amiga graphics. The first slide controls the ratio of Amiga color 0 to external video. The second slide controls the ratio of all other Amiga colors to external video. Both dissolves can be controlled remotely by Amiga software.

Auto-Fade mode.

The black level of the Amiga graphics determine the fade level.

Dual Video outputs.

Professional Key Out.

Output to Video Switchers with Key In capability for special effects.

Switchable Chroma Notch filter.

Helps eliminate chroma artifacts.

Selectable blanking.

Internal or external.

BNC Connectors.

A500, 1000, and 2000 compatible.

SuperGen Makes It Happen!

Actual un-retouched photographs of composite video screens. The flower is live video, the Butterfly is created on the Amiga. **SuperGen** is overlaying the Butterfly onto the flower. The top sequence shows Amiga graphics fading in. The bottom sequence shows the Amiga Background fading in.

is the ability to fill shapes with custom brushes—a neat feature if you happen to be in the wallpaper business. PhotoLab also sports a limited version of the custom-brush tipping feature contained in Photon Paint.

Up Close and Personal

So far, we have compared the three programs on the common ground of our five criteria for good graphics packages. Yet, as we said at the beginning, the use intended for each of these programs is different, thus making a straightforward comparison difficult. To make an evaluation as to which program may be best for your particular needs, let's take a closer look at each package on its own individual terms.

DELUXE PHOTOLAB

It may not quite be the ultimate HAM graphics package, but it's close. I believe Electronic Arts' intention with PhotoLab was to create a graphics environment for the high-end, graphics/video user. The package is actually a collection of three separate programs: Paint, Colors, and Posters.

Paint is designed to allow users to manipulate and bring together all levels of resolution of graphics supported by the Amiga, thus providing for the widest range of possibilities. For instance, digitized images can be used with genlock processing and freehand

drawings made in any resolution mode.

Colors, an image-processing program, can analyze a picture by its various colors and pixel populations, perform color separations in either RGB or cyan/magenta/yellow, convert a color image to its black-and-white equivalent, alter colors, and even change the format of a picture from, say, lo-res to HAM or HAM to lo-res. Colors would be a valuable tool for serious videophiles, or for artists interested in high-end reproduction of their electronic artwork.

Posters is essentially a printer-support program. It allows you to string together several separate pictures to form posters as small as a postage stamp, or as large as a ten-foot-by-ten-foot mural. Posters also has the ability to perform anti-aliasing (removing the jagged edges around images) while printing.

Is Deluxe PhotoLab the ultimate graphics package? The answer may be a strong "yes" if you do lots of video work, but a resounding "no" if you are a free-hand artist. If your requirements are strictly in the latter category, Electronic Arts' own DeluxePaint II will probably be more useful than PhotoLab.

DIGI-PAINT

If we judge Digi-Paint strictly as a stand-alone paint program, the results would not be favorable. I believe, however, that NewTek never intended that it be used as such. As a support package to NewTek's popular Digi-View video-input system, Digi-Paint becomes a ►

LONG ON PERFORMANCE

SHORT ON COST

- Loads DPAINT 2 in 1.4 seconds, identical speed as DMA to cache type controllers costing HUNDREDS MORE! *
- Exclusive IVS SMARTBOOT autoboots ALL drives (including Seagate) from cold start
- Up to 7 SCSI drives can be daisy chained to one Trumpcard
- Full support of Logical Units with Adaptec controllers
- Supports all Quantum, Seagate and Miniscribe drives
- User customizable driver supports virtually any SCSI hard disk drive. The list includes over 15 devices and is growing
- Half length card takes only 1/2 slot
- Optional brackets mount 3.5" drives to card (\$24.95)
- Exclusive IVS checklist configuration software makes hard drive setup a breeze
- 2 ft. 50 pin SCSI cable included with every Trumpcard
- Full 1 year warranty parts and labor

Take a Close Look at the Master-3A

The first thing you notice about the Master 3A is its incredibly small size. But look closer and you'll discover that it's loaded with these great features:

- Fully compatible with the Amiga®
- Full 1 Year Warranty
- Pass through connector lets you easily add additional drives
- Extra long shielded input cable (28") allows easy placement on either side of the computer
- Extremely quiet operation
- Double sided/double density 880 KB formatted capacity
- Durable metal case eliminates radio frequency interference and drive noise
- Spring loaded door keeps out dust
- Consumes less power
- Smaller, slimmer design (4" w × 1 1/4" h × 9" d)
- Costs less to buy

For an even closer look at the Amiga compatible Master 3A, phone your nearest dealer:

Amiga is a registered trademark of Commodore Electronics LTD.

clever add-on, giving you lots of power to adjust and manipulate your video images. Digi-Paint can spiff up existing IFF pictures created with conventional painting programs. Once converted to HAM mode, lower-resolution pictures can easily be altered and improved using Digi-Paint's various utilities.

Also, in preparing this article, I spoke with NewTek officials who told me that they intend to release a new version of the program, Digi-Paint II, in March '89. While I have no hands-on knowledge of the software as of this writing, I can report that the company is enthusiastic about proposed features of the new program, such as 3-D image mapping, full overscan capabilities, super fast response, 1204 x 1204 bitmapping, and automatic anti-aliasing.

PHOTON PAINT

Of all three packages, Photon Paint is the one designed to offer the greatest capabilities and power to the freehand artist. If your intentions are to create artwork from scratch using a HAM mode package, Photon Paint is currently the program to choose. But again, best use of the package may be made in conjunction with another, more conventional paint program. Like Digi-Paint, Photon Paint allows the importing of any resolution picture in IFF format. Therefore, although Photon Paint is fast enough to make freehand drawing possible, you will still be better off to create your initial artwork in the con-

ventional paint program, and then jazz it up using Photon Paint's powerful assemblage of HAM tools.

BETTER HAM TO COME?

So where do things stand with regard to HAM graphics software? Although the real-time barrier for HAM mode has yet to be broken, HAM is definitely the wave of the future. As interest in HAM technology increases, and as accelerators and math coprocessors become cheaper, developers will write software that will take advantage of the potential of such hardware to speed up HAM calculations. The result should be that we get much improved, faster HAM programs at affordable prices.

Until then, freehand artists should keep in mind that there is still plenty of power, speed, and usefulness left in those old, conventional paint programs. For now, HAM, although powerful, serves the artist better as an enhancer rather than a creator. On the other hand, if video is your area, HAM graphics software can be put to excellent use right now in providing you with flexible control over your high-resolution video images. ■

Bruce Jordan is a frequent contributor to Amiga and C64/128 publications. He also worked on the development of the Super-Forth programming language. Write to him c/o AmigaWorld, Editorial Dept., 80 Elm St., Peterborough, NH 03458.

**Sound
oasis**

\$99⁹⁵

The internal sound capabilities of the Amiga are better than that of any other personal computer. These capabilities mean nothing though, without quality digital sounds, which up till now have been scarce. Sound Oasis gives Amiga owners access to a large library of studio-tested digital samples, by using the Amiga's built in disk drive to read disks made for the Mirage Digital Sampling Keyboard. Sounds can then be played from a MIDI keyboard, the computer keyboard, or saved as an IFF standard file. Mirage is a trademark of Ensoniq Inc.

**dynamic
drums**

\$79⁹⁵

Transform your Amiga into a professional-quality drum machine with this software package. Easier to use than hardware-based drum machines because everything is displayed graphically on screen. Enter drum patterns quickly and easily in real time with visual feedback and editing. Create realistic drum tracks with any of the 100 drum and percussion samples that are included or use your own unique IFF one-shot samples. Dynamic Drums also has full MIDI implementation and even becomes velocity sensitive when triggered from a MIDI keyboard.

**DYNAMIC
STUDIO**

\$199⁹⁵

A powerful MIDI sequencer that takes full advantage of the Amiga's sound, graphics, and sophisticated user-interface. Dynamic Studio is perfect for professional applications due to its sophisticated editing capabilities and SMPTE support. It is also ideal for home studios, because in addition to sequencing MIDI instruments, Dynamic Studio has a built-in drum machine, and the ability to playback instruments translated with Sound Oasis.

**An occasional series
of tips, techniques,
and tricks for
creating more
imaginative Amiga
graphics.**

◆
By Joel Hagen

From Screen Image To Finished Illustration

THE COMPLETE BEGINNING-to-end task of creating computer graphics and producing the finished product in published form is one of the more challenging—and satisfying—exercises for the Amiga artist, professional and amateur alike. While this series so far has concentrated on tips and techniques for creating the images themselves, a look at the unique problems of actually producing those images as finished illustrations will be of real practical value.

While pictures created on the Amiga are clear, bright, and crisp when viewed on the monitor, getting those same images into publishable form is another matter. A recent book assignment of mine may serve to illustrate this dual aspect of the computer graphics process. Because the reproduction side of things proved more problematic, we will examine that part of the project first and then work back to how I actually composed the images in the first place.

My assignment involved illustrating a series of six science fiction novels about an adventurous, space-faring archaeologist of the future named Dr. Bones. Each book contains 12 illustrations providing a “computer data bank” section of black-and-white images as a visual supplement to each story. Ideally, the publisher wanted finished hardcopy illustrations, ready to shoot. The fact that the visuals were supposed to be computer screens made the project a perfect Amiga experiment. I felt the computer could be the appropriate tool for the entire job, making the task of doing so many illustrations faster and more interesting.

Problems cropped up, however, as I

began sending preliminary tests to the publishers in various forms. Screen shot transparencies looked great, but when the publishers enlarged them as halftones, the visual quality deteriorated to an unacceptable level. Printer output seemed the best solution, although my own 24-pin printer was out of the question. While fine for high-contrast images, when it comes to gray levels—even with the new drivers—it does not produce publishable quality. I tried outputting to an HP laser printer and was again disappointed. The dithering algorithms produced a gray scale that looked like a sampler of plaid patterns from a kilt maker.

Although I was prepared to accept a bitmapped “computer screen” look to the finished illustrations (it seemed appropriate to the theme), I was just not getting satisfactory results. At the time I was doing these initial experiments, PostScript was new to the Amiga community. None of the software supported it yet, but I had been impressed with PostScript output from the Macintosh. PostScript interprets gray-scale information as larger or smaller dots in the finished picture. From a LaserWriter, the results are similar to an 85-line screen—about the same image quality you see in a newspaper photo. A Linotype machine gives even better results.

I located a shareware PostScript converter for the Amiga called IFF2PS by William Mason and Sam Paolucci. They used it to print out a couple of my images on a LaserWriter and the results were beautiful. IFF2PS is simple to use, and I highly recommend it. It does its job without any frills, and does it well. IFF2PS reads any IFF ILBM (Interchange File Format / Interleaved Bit-

**Making your illustrations look
as good on the page
as they do on your monitor
can be a tricky proposition.**

map) picture file and converts it to PostScript format. This can be output to a laser printer as it is being converted, or stored on disk for printing later. There are several options that help automate this task. I sent the test pictures to the publishers who reported they could use the printouts without any reshooting in their final layouts. The main problem was solved. (See Figure 1 for a comparison of the screen image and its PostScript printout for one of the *Dr. Bones* illustrations, "Temple Carvings.")

BACK TO THE DRAWING BOARD

With 72 illustrations to produce, I took every advantage of the Amiga to save time and effort. Using DeluxePaint, I worked in the 320×400 interlace mode to give me good resolution with fast response time and full tool use. I created a master screen containing a "book page" work area of appropriate size and proportion. Within this page, I laid out a framed image area and a caption bar at the bottom. This would be the starting point for every illustration, providing the consistent look of the "computer data bank" section. I created a toolkit of visual elements I would be using repeatedly. These included grids, gray scales, ID chops, reticle patterns, and so forth. I arranged these on the master screen where they were always accessible and could be quickly picked up as brushes and moved into the illustration. I left empty space on the screen, both as a scratch pad area and for entering text. I arranged the first 16 colors of the palette as a sequential gray scale and established it as a Range so I could make effective use of Shade and Blend tools. This master screen could now be loaded to begin

Figure 1: Comparison of screen image (left) of "Temple Carvings" with its PostScript printout (right). The illustration is from book three of the *Dr. Bones* series, Byron Prells Visual Publications, Inc. for Ace Books. Copyright 1988 Byron Prells Visual Publications, Inc.

each new picture, eliminating any setup time. This is a unique strength of the computer.

I decided to keep an illusion of realism to the series of illustrations. I did not always draw or paint the images from scratch as I might have with paint or pencil. Instead, I often made use of Digi-View to give me a digitized image as a starting point. I then used the unique features of DPaint to completely alter these images, while retaining the photographic look. In the "Temple Carvings" illustration (Figure 1), I began by digitizing Mayan carvings. I erased much of the image to focus on a human face. Using Blend, I "pushed" the image into the reptilian features appropriate to the plot of the book. (See Accent #2, Feb. '89, p. 42, for more about using the Blend tool in this fashion.) I used Shade to add carving lines, highlights, and shadows. Picking up small areas of untouched rock texture from other parts of the picture, I stamped them sparingly on the new features I had created, using the X and Y keys to flip the texture and thus

preventing a repeating pattern. Using the same technique, I "drew" new carvings elsewhere in the image. I added the caption, pulled in symbols from my scratch pad toolkit, and saved two copies of the finished picture.

Converting these IFF files to PostScript packs six image files on each disk. With a LaserWriter on the serial port, the command COPY filename TO SER: starts the ball rolling. By using CTRL J after each COPY command, the Amiga queues up the commands allowing you to leave the machine unattended while it finishes one or two disks full of images.

Overall, the initial period of experimentation took time, but the method that evolved is quick and produces clean results. It doesn't fight the limits of the computer, it capitalizes on them. ■

SPRUCING UP THE OLD BENCH—1*

Preferences: A Top-Drawer Act

With a drawer of its own and a fistful of new tools, 1.3's

Preferences offers improved overall control of your system.

By Mark L. Van Name and Bill Catchings

**Editor's Note: This month info.phile begins a new AmigaDOS 1.3 "mini-series." While the previous collection ("Exploring AmigaDOS 1.3," August '88–December '88) focused on new or improved CLI commands, this series tackles the other side of the AmigaDOS coin: the Workbench. 1.3's Workbench includes a number of brand-new programs and utilities, and improved features for some of those carried over from version 1.2. These changes will be the subject of the next several info.phile columns.*

A FUNDAMENTAL WORKBENCH tool, Preferences still performs the same job of letting you control many of the basic aspects of your Amiga, but it now offers you some new tools for accomplishing that task. In addition, you will find it in a new location. While in 1.2 the Preferences icon appeared when you opened the Workbench disk, you will now find it when you open the new Prefs drawer.

This drawer also contains four new icons: CopyPrefs, Pointer, Printer, and Serial. CopyPrefs is something new, and we will take a look at it in just a moment. The other three are shortcuts into their respective Preferences windows.

Double-click on Pointer and up comes the Preferences Edit Pointer window. Similarly, the Printer icon takes you to the Change Printer window, while the Serial icon lets you into the Change Serial window. You can still get to any of these windows in the old way, of course; start Preferences and pick the gadget for the window you want. The new icons simply eliminate that extra step if you want to go to one of their windows directly.

The new icons, however, do not save you any work when you are ready to exit those windows. When you click on OK or Cancel in any of these windows, you end up in the main Preferences window. There you must choose to Save, Use, or Cancel your changes. The only way to save or use your changes is still to pick the appropriate menu option from the main Preferences window.

The Preferences windows for the Serial and Pointer icons remain the same as they were in AmigaDOS 1.2. The main and Change Printer windows, however, are different. The former sports two new changes, one visible and one hidden. You will notice immediately that

the CLI On/Off gadget from 1.2 is gone. You now get both a CLI and a Shell by default.

The hidden change matters only if your Amiga has a battery-backed clock/calendar. If it does, when you change the date or time in Preferences and then save your changes, Preferences automatically sets the clock/calendar to the new date and time.

NEW GRAPHICS PRINTER CONTROLS

The improvements to the Change Printer window may at first glance appear equally minor, but don't be misled: There's a lot more under the hood. The only visible change is that the Graphic Select gadget of the 1.2 Preferences is now two gadgets, Graphic 1 and Graphic 2.

Click on Graphic 1 and you will find yourself in a window that is essentially the same as the old Graphic Select window. The only difference is that there is one additional Print Shade option: GrayScale2. This option makes it easier for owners of Commodore's new A2024 monochrome monitor to translate their screen images into printed output, because the A2024 supports four shades of gray. ►

TAX BREAK™

Tax Preparation and Planning Tool

TAX BREAK™ is easy-to-use with on screen representation of forms and schedules, fast recalculation, and constant status of taxes due or refunds. Full integration of all forms and schedules allows constant updating of tax status for evaluation of different tax scenarios.

- Scrollable, on screen look-a-like forms and schedules
- Schedules can be opened from a menu or by double clicking on the schedule result line in form 1040 in US version or T1 for Canadian version
- Ongoing status of taxes due and refunds at bottom of each form, or expanded status screen available with mouse click or F2 key
- Instant updating of forms and schedules with each recalculation
- Line by Line data entry prompts
- On screen IRS booklet
- Prints IRS approved facsimile forms
- Pop up calculator
- Zoom in and out of interface at will

US version 1.0 includes Form 1040, Schedules A-E, SE, 1906, 2441, IRA and more!

Circle 75 on Reader Service card.

While the Graphic 1 window may be familiar, Graphic 2 is all new. It contains ten gadgets that let you control some of the Amiga's extended graphics printing features.

These new gadgets fall into three basic groups. One group provides control over the size of the printed image. With the Width Limit and Height Limit gadgets you can restrict the image's size. Whether your Amiga actually obeys those limits, and how it interprets them, depends on how you set the <-Limits gadget. A scaling gadget allows you to tell your Amiga to shrink or grow the image.

The second group of new gadgets affects the placement of a printed image on the page. With the Left Offset gadget, you can shift the image left—effectively setting a left margin on the paper. You can also center the image with the Center gadget.

The final set provides you with control over many aspects of the image's quality and appearance. You can specify the printing density with the Density gadget; obviously, less dense images print faster, but they may not look as good as more

dense ones. You can also tell the Amiga to match the on-screen image colors as closely as it can with the Color Correct gadget. Two other gadgets, Smoothing and Dithering, give you finer controls over how the Amiga defines the outline and color, respectively, of the printed image.

WHERE DID ALL THE PRINTERS GO?

One big shock you are likely to encounter when looking at 1.3's Preferences is that all but one of the printer drivers have vanished from the Workbench disk. 1.2's Preferences contained a list of every printer supported because all of their driver programs were on the Workbench disk. When you bring up Preferences on the standard 1.3 Workbench disk, there is only one printer in the list: Generic.

Don't worry, though; they have not disappeared entirely. All of the old printer drivers, as well as some new ones, are now on the 1.3 Extras disk that comes in the 1.3 Enhancer Software package. The 1.3 Workbench disk was so full that there was simply not enough room for them there.

Assuming that you have either a hard disk or enough room on your Workbench disk to hold the printer drivers you want, you can copy them from the Extras disk to the DEVS:printers directory of your Workbench disk and be back in business.

You can do that copying in two ways. If you are a Shell or CLI user, try the following COPY command:

COPY "Extras 1.3:devs/printers/
<driver name>" TO DEVS:printers

where <driver name> is the name of the printer driver you want. (This command assumes that your Workbench disk is in one drive and your Extras disk is in the other. If not, or if you have a one-drive system, AmigaDOS will prompt you to put the needed disks in the drive(s) at the right times.)

Of course, if you don't want to mess with the Shell, this approach is not for you. Fortunately, Commodore has included a new utility, InstallPrinter, that will do the job for you. To find it, open the Workbench's Utilities drawer. Double-click on the InstallPrinter icon and a window will appear displaying a list of all ►

Professional Computer/Video requires the NERIKI IMAGE MASTER™ PRO GENLOCK

- The NERIKI IMAGE MASTER™ PRO GENLOCK outputs 520 lines of encoded NTSC resolution (600 lines in PAL). It incorporates an adjustable luminance keyer and has chroma phase adjustment, 5.5Mhz bandwidth +/-3db, and a S/N ratio better than 48db.
 - The NERIKI is RS170A standard. It supports all AMIGA graphics modes & resolutions and is fully compatible with all Amiga models the A500, A1000, A2000 and the new A2500.
 - This rack mountable unit has a built-in power supply and a full complement of BNC input & output connectors, integrating all your professional and broadcast studio requirements.
- Write or call for a specification sheet.
Dealer inquiries invited.

Harness the power of your Amiga—
Learn to use AmigaDOS and the CLI—
Become an Amiga power user—

With . . .

THE AMIGA COMPANION

by Rob Peck

THE AMIGA COMPANION, a new book from AmigaWorld magazine, is your comprehensive guide to AmigaDOS and the CLI. In clear, concise, easy-to-understand language, The Amiga Companion shows you how to use the full range of powerful AmigaDOS and CLI commands to get maximum performance from your Amiga 500, 1000, or 2000. Authored by Rob Peck, formerly of Commodore-Amiga, The Amiga Companion is written with a thorough understanding and mastery of this vanguard computing system.

The Amiga Companion helps you master basic, advanced, and innovative command skills with subjects like . . .

- ▶ Overview of the Workbench Disk
- ▶ Introduction to the CLI
- ▶ Modifying Your Operating Environment
- ▶ Surviving with a One Disk-Drive System
- ▶ Understanding the Execute Command
- ▶ Startup Sequences
- ▶ Informational Commands
- ▶ Modifying Files Using AmigaDOS
- ▶ Mastering System Utilities

Plus dozens of additional subjects to tap the full potential of your Amiga computer.

Author Rob Peck is one of the most respected and knowledgeable leaders in the Amiga community. While with Commodore-Amiga, Rob wrote the ROM Kernel Manual, the bible of Amiga Developers. Rob is also the author of Programmers Guide to the Amiga and numerous magazine articles, including "Reaching the Notes: Easy Access to Amiga Audio" in the July/August 1987 issue of AmigaWorld.

Best of all, you don't have to be a technical expert to put The Amiga Companion to work for you. The moment you open this help-filled book, you'll get more out of your Amiga than ever before! And as your skills develop, you'll find plenty of advanced ideas and information to make The Amiga Companion the most valuable peripheral you own.

Order Now! Use the coupon below to get your copy of The Amiga Companion, or call 1-603-924-4061 with your Visa, American Express or MasterCard during regular business hours. Your copy of The Amiga Companion will be rushed to you. Order Today!

Special Offer to Readers of AmigaWorld!

Just \$19.95! The Amiga Companion is not available in bookstores. This valuable book is available exclusively to AmigaWorld readers. Order your copy today! Call 1-603-924-4061, 9AM-5PM, Mon.-Fri., Eastern time, or mail this coupon.

Mail this coupon to:

The Amiga Companion, IDG Communications/Peterborough, 80 Elm St.,

AW10

the printer drivers on your Extras disk. (Again, have the Extras and Workbench disks in your drives or be prepared to put them there.)

Now pick the one you want, type its name at the prompt

Which printer ? (press RETURN to exit)

and press RETURN. If you understand the CLI-style filename wildcards, you can also use them here. Once you enter a printer driver name, InstallPrinter will do the copying. As it works it will print these two messages:

Now copying your printer choice to
devs:printers.

Now choose this printer using
Preferences.

It then will exit and send you back to the Utilities window. If you change your mind and want to exit this program without doing any copying, hit RETURN without entering a printer driver name.

HELP FOR HARD DISK USERS

InstallPrinter is not the only handy new 1.3 utility. CopyPrefs, the new icon

found in the Prefs drawer, is designed to help those of us who make changes in Preferences and have hard disks that won't autoboot. To understand why we may need help, consider the following possible chain of events.

Because your hard disk cannot autoboot, you boot off your Workbench disk, which causes your Amiga to use the Preferences information stored on that disk. (Preferences stores its information in the file system-configuration in the DEVS: directory.) Then, in your startup-sequence file, you ASSIGN the important directories, including DEVS:, to their hard-disk counterparts, and then CD to your hard disk for your real work.

While you are working there, you bring up Preferences, make some changes, and click on Save. Preferences saves those changes to the file system-configuration in DEVS:, which is on your hard disk. So, when you next reboot off your Workbench disk, none of the Preferences changes you made are on that disk, and you're out of luck.

CopyPrefs is an easy way out. When you run it after saving changes in Prefer-

ences, it copies the system-configuration file from your current DEVS: directory to DF0:devs. As long as you put your Workbench disk in drive DF0: before you run this program, you will be all set. Next time you reboot off that disk you'll have the updated Preferences.

CopyPrefs is very easy to run; just double-click it. It will open a window titled IconX and display the message

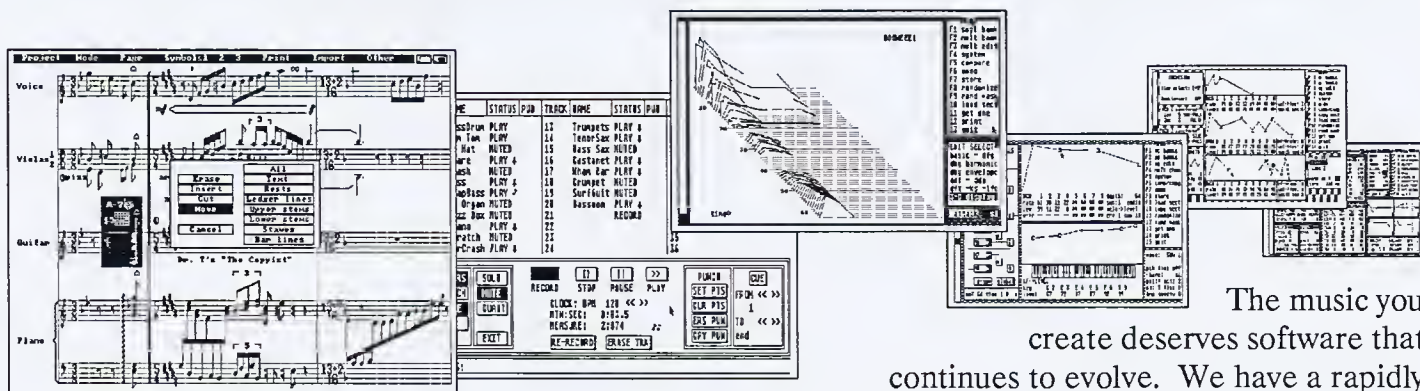

Copying devs:system-configuration to
DF0:DEVS

and then do the copying for you. When it's done, the window goes away and you are back in the Workbench.

The reason the CopyPrefs window is titled IconX is that CopyPrefs is actually a Shell batch file, and IconX is the name of the 1.3 program that lets Workbench users execute batch files. One handy side effect of this fact is that you can edit CopyPrefs. For example, if you are rebooting from the RAD: recoverable RAM disk, you might want to add a second line that copies system-configuration to RAD:DEVS as well.

Tune in next time for a closer look at the new Preferences printer options. ■

And The Beat Goes On...

Boing! Mouse

Professional Optical 3-button mouse for your Amiga. Available EXCLUSIVELY to Creative Computers!

The first and only Optical Mouse for the Amiga - \$114. This mouse is definitely the best mouse you can buy for your Amiga.

- Optical technology eliminates friction and momentum coefficients for super-precise handling.
- No moving parts for increased reliability.
- Middle button makes it the only mouse compatible with A2024 software and X Windows.
- Compatible with ALL Amiga computers.

ONLY AT CREATIVE COMPUTERS

CREATIVE COMPUTERS is both a mail order company with a store's support and three store showrooms with mail order prices. Visit one of our showrooms today. You'll be amazed!

3 RETAIL SHOWROOM LOCATIONS TO SERVE YOU

SANTA MONICA & WESTSIDE: 318 Wilshire Blvd., Sonto Manico, CA 90401. Tues.-Sat. 11-7 p.m./Sun. 11-5 p.m./Phone: 213-394-7779

LAWNDALE & SOUTH BAY: 4453 Redondo Beach Blvd., Lawndale, CA 90260. Mon.-Sat. 11-7 p.m./Phone: 213-542-2292

VENTURA, OXNARD & SANTA BARBARA: 2112 E. Thompson Dr., Ventura, CA 93001. Tues.-Sat. 11-7 p.m./Sun. 12-5 p.m./Phone: 805-652-0325

THE CREATIVE COMPUTERS ADVANTAGE:

- Authorized Amiga Dealer
- The largest dealer of Amigo products in the World
- Three store locations means excellent support
- Amigo-specific—unlike the competition, we don't claim being Amigo specific while selling other brands under another business name
- Authorized service center
- Uniform low pricing and largest selection, no hidden costs or catches
- We don't charge your card until the product ships

CUSTOMER SERVICE: Call 213-542-2292 from 11 a.m. to 7 p.m. PST for technical questions.

***SHIPPING INFO:** No surcharge for VISA/MasterCard; 4% surcharge for American Express; 1% surcharge for Discover. Shipping within the continental United States for software orders over \$100 (U.S.) is FREE. Please call for all other shipping information. Educational, corporate and aerospace purchase orders accepted.

RETURN POLICY: Defective merchandise under warranty will be repaired or replaced. Returned products must be in original condition and packaging. No refund on defective products or products that do not perform satisfactorily. We make no guarantees for product performance.

CONDITIONS: Creative Computers reserves the right to limit the sales of any items to local in-person pick-up only. Prices and availability subject to change without notice.

CREATIVE COMPUTERS GOES INTERNATIONAL!

TOLL-FREE NUMBERS: Minimum orders \$100 (U.S.). Orders only please. Absolutely no product inquiries or any questions will be taken on these lines.

INTERNATIONAL PHONE NUMBERS: Canada 1-

THE GAME PRESERVE

EACH MONTH, B.G. (Big Game) Hunter is on the prowl for great games or the game's greats.

The Great One

See what's hot on ice.

By B.G. Hunter

HOCKEY WILL NEVER be the same. Last summer, Wayne Gretzky left the Edmonton Oilers to play for the L.A. Kings. Through winter rumors I learned he was moving again—to the Amiga in Bethesda Softworks' Wayne Gretzky Hockey. Impatient with waiting and hype, I forced my way into software's pregame practice session, the beta version, for a preview. As I feared, the game suffers from typical beta bugs, but it's dynamite nonetheless.

Even the opening credits are fun. A hockey player two-thirds the height of the screen skates to a puck in the center of the monitor. He pulls back his stick and takes a slap shot right at you. The crowd roars.

The puck grows as it flies at you, and then it bursts through the monitor! The screen breaks, and shards of glass fly everywhere. (Who got to break a TV screen to get that digitized sound, and how can I sign up?)

Your view of the game itself is from the rafters. The screen displays two-thirds of the rink and a few rows of fans above it. The rink scrolls as play moves up the ice. When your players are standing still, you see helmets, shoulders, and hockey sticks. When a player skates, however, little legs flick out behind his body. (They even dance with anticipation at the face-offs.) The graphics could be better, but they are a step up from the colored-circle players of Bethesda's earlier game, Gridiron.

You can control any player, except the goalie. The mouse control, however, takes practice to master. Your mouse directs an X on the screen; move the X and your player skates toward it. He skates faster when the X is farther away. To pass or shoot, press the left button, move the X where you want the puck to go, and release the button. Once you get the hang of it, the motions become second nature.

As I played, I noticed many little things that make a good game great. The crowd roars when a player takes a shot. Watch closely: as the players move, their skates leave white tracks on the light blue ice. When ▶

All the action (and emotion) of real hockey.

One Good Book deserves another and another, and another, and a...

New

Amiga 'C' for Advanced Programmers

Amiga C for Advanced Programmers

-contains a wealth of information from the pros: how compilers, assemblers and linkers work, designing and programming user friendly interfaces using Intuition, combining assembly language and C codes, and more. Includes complete source code for text editor.

ISBN 1-55755-046-8 400 pp **\$24.95**

New

Amiga 'C' for Beginners

Amiga C for Beginners

-an introduction to learning the popular C language. Explains the language elements using examples specifically geared to the Amiga. Describes C library routines, how the compiler works and more.

ISBN 1-55755-045-X 280 pp **\$19.95**

New

Amiga 3D Graphics Programming in BASIC

Amiga 3-D Graphic Programming in BASIC

-shows you how to use the powerful graphic capabilities of the Amiga. Details the techniques and algorithms for writing three-dimensional graphic programs: ray tracing in all resolutions, light sources and shading, saving graphics in IFF format and more.

ISBN 1-55755-044-1 300 pp **\$19.95**

Amiga Disk Drives Inside & Out

Amiga Disk Drives Inside & Out

-is the most in-depth reference available covering the Amiga's disk drives. Learn how to speed up data transfer, how copy protection works, computer viruses, Workbench and the CLI DOS functions, loading, saving, sequential and random file organization, more.

ISBN 1-55755-042-5 360 pp **\$29.95**

Amiga for Beginners

Amiga For Beginners *

-the first volume in our Amiga series, introduces you to Intuition (Amiga's graphic interface), the mouse, windows, the CLI, and Amiga BASIC and explains every practical aspect of the Amiga in plain English.

ISBN 1-55755-021-2 184 pp **\$16.95**

Includes Workbench 1.3

Best Seller

AmigaBASIC Inside and Out

AmigaBASIC Inside & Out

-THE definitive step-by-step guide to programming the Amiga in BASIC. Every AmigaBASIC command is fully described and detailed. Topics include charts, windows, pull-down menus, files, mouse and speech commands.

ISBN 0-916439-87-9 554 pp **\$24.95**

Includes Workbench 1.3

Amiga Tricks & Tips

Amiga Tricks & Tips

-follows our tradition of other Tricks and Tips books for CBM users. Presents dozens of tips on accessing libraries from BASIC, custom character sets, AmigaDOS, sound, important 68000 memory locations, and much more!

ISBN 0-916439-88-7 348 pp **\$19.95**

AmigaDOS Inside & Out

-covers the insides of AmigaDOS from the internal design up to practical applications. Includes detailed reference section, tasks and handling, DOS editors ED and EDIT, how to create and use script files, multitasking, and much more.

ISBN 1-55755-041-7 280pp **\$19.95**

Includes Workbench 1.3

Amiga Machine Language

-is a comprehensive introduction to 68000 assembler machine language programming and is THE practical guide for learning to program the Amiga in ultra-fast ML. Also covers 68000 microprocessor address modes and architecture, speech and sound from ML and much more.

ISBN 1-55755-025-5 264 pp **\$19.95**

Amiga System Programmer's Guide

-comprehensive guide to what goes on inside the Amiga in a single volume. Only a few of the many subjects covered include the EXEC structure, I/O requests, interrupts and resource management, multitasking functions and much, much more.

ISBN 1-55755-034-4 442 pp **\$34.95**

AmigaDOS Quick Reference *

-an easy-to-use reference tool for beginners and advanced programmers alike. You can quickly find commands for your Amiga by using the three handy indexes designed with the user in mind. All commands are in alphabetical order for easy reference. *Includes Workbench 1.3*

ISBN 1-55755-049-2 128 pp **\$14.95**

Computer Viruses: a high-tech disease *

-describes what a computer virus is, how viruses work, viruses and batch files, protecting your computer, designing virus proof systems and more.

ISBN 1-55755-043-3 292 pp **\$18.95**

"Probably the best and most current book...a bevy of preventive measures"

each period ends, most of the ice is white. The big-screen, overhead scoreboard shows you the team filing out to the locker room. Out rolls the Zamboni to clean up the ice.

TWO MINUTES FOR ROUGHING

Most of all, the game is true to hockey. Want to check a player? Click the mouse as you run into him. Hit him hard enough and you can savor the image of him sliding spread-eagle across the ice. You are also liable to see the referee on the overhead scoreboard giving the official signal for a penalty. Tripping, high-sticking, elbowing—I've had them all. Be prepared to sit out your five minutes for fighting, too. At least you can watch the action on the overhead scoreboard as two players hit each other for no apparent reason.

To top it all off, this game has tons of customizing options and keeps enough statistics for even the most maniacal sports statistician. Each player has twelve characteristics, such as position, aggressiveness, quickness, checking, passing, and shooting. You can play, coach, or both. You can set up your lines, including penalty-killing and power-play lines. You can handicap yourself, your opponent, or the computer. You can even save your game and restore it later.

The replay facility is my favorite; it's wonderful, particularly after a goal or a penalty. The replay goes back ten seconds or to the previous face-off, whichever was more recent. You control a slide bar marked Forward at the top and Reverse at the bottom. Move the sliding line to the center and the action stops. You can back up the game to the desired point, then watch the play very slowly unfold again. It's a great way to learn what you just did wrong or to enjoy again the murderous check you put on some poor soul.

Don't get me wrong: This game is not perfect, but most of the flaws I found were related to the fact that I was playing a beta version. For example, my team's

coach assembled some weird lines. One time I had the same player at both center and right wing. I also ended up with some amazingly wimpy players. One was exhausted after spending two minutes in the penalty box! I've never actually sat in one, but it doesn't look like hard work.

More annoying was the fact that the version I played had only two teams, the Washington Capitals (Bethesda Softworks is in Maryland, so I can forgive them a little local color) and the New Jersey Devils. The Devils? Where are the L.A. Kings? It is Gretzky's game, after all. Who are those Devils players, anyway? Fortunately, Bethesda promises that the final version will include four great Stanley Cup teams. The company also plans to sell data disks of all of the 1987 and 1988 NHL teams.

My final complaint is that currently you can't administer a whole league, although Bethesda plans to add this before the game's release. According to the company you will have a module of "commissioner" functions, such as trading and creating new teams.

Still, it's hard to complain, because Bethesda plans to address all of my gripes in the final version. It's great to see a game that's so faithful to real hockey. Once again Gretzky proves why he is The Great One. □

Although not the type to be caged in an office, B. G. Hunter does skulk in occasionally to pick up his mail. Write to him c/o AmigaWorld, Editorial Dept., 80 Elm St., Peterborough, NH 03458.

DUNGEON MASTER

By Louis R. Wallace

DUNGEON MASTER IS a role-playing adventure that carries you and your troop on a mission to recover the Fire Staff, which Lord Chaos has stolen and hidden deep in a dungeon.

You choose your four party members from among many

champions, each of whom has a unique set of characteristics. Each adventurer's skills, possessions, strength, and knowledge will increase during the course of your explorations.

Inside the dungeon, you will find weapons and armor that can help you survive fights. You must also find food and water; your people need to eat, drink, and rest regularly

(the game is played in real time) in order to maintain their health and stamina.

Dungeon Master is completely mouse driven. The screen is divided into two sections: the dungeon display window and a menu-and-icon panel. Simply by pointing and clicking, you can select a sword

from a character's backpack, for instance, and tell him how to use the weapon and how to attack. In the dungeon display, your mouse pointer appears as a hand. With it, you can pick up items, pull levers, press buttons, and unlock doors. You ►

IN SIDE-BY-SIDE COMPARISONS,

LATTICE BLEW MANX AWAY.

Introducing new Lattice C for Amiga DOS, Version 5.0.

Lattice C 5.0 is the fastest compiler by every measure. No other language, no other compiler, gives you faster, more efficient programs. And it now supports 68020 and 68881.

And no other compiler gives you a more complete programming environment. This package includes:

- Lattice C Compiler • Compiler Companion Utilities
- Source Level Debugger (CodeProbe) • Code Profiler
- Global Optimizer • 304 C Library Functions • Blink Overlay Linker • Assembler • Disassembler • Librarian
- Sample Files & Examples • Lattice Screen Editor • Installation Program • Comprehensive Documentation.

Our new, easy-to-use, Source Level Debugger, *CodeProbe*, supports both C and Assembly language, and multi-tasking debugging. And the new Global Optimizer will actually *enhance your programs' performance up to 40%*.

So the choice is easy: You can own the fastest, most powerful, most complete C programming environment available. Or for about the same price, you can buy a package that's shot full of holes.

To purchase Lattice C 5.0 or for more information, see your favorite software supplier.

can also carry and throw weapons with this hand, as in an arcade game.

Most characters can use magic, but a spell's success depends on the amount of Mana (magical energy) the character

possesses and his knowledge of symbols and runes. You must figure out which spells are available and how to cast them. While scrolls scattered throughout the dungeon offer some clues, for the most part

you learn by trial and error. On the icon panel are four groups of six runes. By combining the runes in various ways, you can cast a multitude of spells. To achieve proficiency, you must experiment with combinations; some do nothing, but others can help you overcome obstacles and creatures. The more spells you attempt, the more your Mana increases.

You see the dungeon and its inhabitants—mummies, purple blobs, stinging rock-pile dwellers, and walking mushrooms (you can use the latter for food)—through the eyes of your characters. If you keep your ears open, however, you will often hear the monsters first through digitally-sampled sound.

I became more intrigued

with *Dungeon Master* the longer I played. The animation, detailed-perspective graphics, and sound are excellent, and the menus and icons are easy to use. The challenge of learning the magic spells makes the game realistic. *Dungeon Master* is one of the best programs of its type. It is complex enough to hold the interest of the most seasoned role-player, and its simple interface makes it ideal for those new to fantasy adventures. I recommend it!

Footsteps warn of the monsters' approach...are you prepared?

CARRIER COMMAND

By Chris Dickman

AT THE HELM of a carrier transporting amphibious assault vehicles and fighter planes, you find yourself wreaking wholesale havoc in a 3-D arcade environment, strategizing all the way. *Carrier Command*'s universe consists of about 60 mythical islands. Your mission is to establish a base on each one while the bad guys, equipped with a similar vessel, are bent on doing the same.

To track your progress, you can display a map that indicates the status of the islands (neutral, friendly, or hostile), as well as the colored network links between them. Prematurely attacking the enemy ship or its heavily-defended home island is deadly, so you must first colonize a group of isles around your home, then extend your network by creat-

ing protective clusters until you are in a position to make an assault.

You will need a resource island on which to construct mines, oil rigs, and fuel dumps. Output from these is shipped to factory islands for use in manufacturing weapons and refining fuel. Defense bases can protect other more vulnerable islands, and you can store constructed weaponry, fuel, and equipment on stockpile islands. All this stuff is shuttled through the network and finally to your ship. Meanwhile, the computer-controlled enemy is establishing bases for itself and trying to capture your colonies.

While engrossing, the colonizing process can become exhausting with its rigorous attention to detail. You must set a slew of priorities, for example, to indicate the rate at which the resource network manufactures replacement

You started your mission with four Walruses, but lost two in combat.

weaponry and fuel. Sound too much like work? Then it's time to take a break from colonizing neutral islands and

launch an attack on a hostile one. To accomplish this, you can use the ship's cannon, but ►

DATEL COMPUTERS

AMIGA PRO SAMPLER STUDIO

- A top quality sound sampling system at a realistic price.
- All the usual features of a sampling system plus many more.
- 100% machine code software for realtime functions.
- Hires sample editing.
- Realtime frequency display.
- Realtime level meters.
- Files saved in IFF format.
- Adjustable manual/automatic record trig level.
- Variable sample rate and playback speed.
- Separate scroll line waveform windows plus zoom function with Edit windows for fine accurate editing.
- Hardware compatible with many other software packages.
- Software files can be used within other music utilities.
- Reverse, copy, mix, clear plus other edit facilities.
- Microphone and line input 1/4" Jack and Din connections.
- 3D shot of sound waveform. Wave editor to design your own waveforms or adjust existing ones.

ONLY \$199.99 COMPLETE SYSTEM, PLEASE STATE A500/1000/2000

MIDI MUSIC MANAGER

● At last a truly professional Midi package for the Amiga at a realistic price.

- 8 realtime Midi tracks for record/playback
- Works with standard IFF files
- Adjustable track length - limited only by available memory
- Use as a multi-track Midi recording studio
- Works with many Midi interfaces including Datel Midi Master (see Ad) and Nimetics
- Editing facilities for corrections and track joining etc.
- Internal or External Midi clock control
- Play sampled sounds on Amiga from any Midi track
- Full dubbing - listen to one track while recording another
- Perfect companion for Pro Sampler Studio or any music application

ONLY \$59.99

PRINTER CABLES

- 25 pin 'D' to 36 way Centronics parallel lead.
- A 500 or 1000 please state.
- 1.2m length.
- 25 pin 'D' to 25 pin 'D' - serial printer lead.
- A500 or 1000 - please state.
- 2m length.

ONLY \$14.99

MIDIMASTER

- Full Midi Interface for A500/2000/1000 (Please state model)
- Compatible with most leading Midi packages (inc. D/Music)
- Midi In - Midi Out x 3 - Midi Thru
- Fully Opto Isolated
- No need to pay more - Full Midi standard

ONLY \$59.99

DATA/SWITCH BOXES

- A/B type connect two printers to one computer (or vice versa).
- Centronics connections or RS232 (Serial) connections (25 pin) please state.

AMIGA BURST NIBBLER

- Superfast disk copier will copy almost any commercial disk.
- Friendly user Interface - Mouse driven throughout.
- Completely compatible with Amiga multitasking system.
- Special 'Strategy Files' cope with even the most advanced protection schemes.
- Fast operation - typically around 80 seconds.
- Even decrypts many encoded programs including DPrint/Video Paint/Music/II etc.
- Works with one drive or two.
- Multiple copy option allows you to make many copies from one original.
- Copy 1 or 2 disk sides - up to 85 tracks.
- Unique 'INFO' analyser - displays vital disk parameters, including sector distribution, data dispersion, etc. etc.
- Special format parameters for non standard formats.
- Full verify option.
- Easy to use icon driven program takes the mystery out of disk backup.
- Compatible with all Amigas.
- Regular updates available - we always ship the latest.

ONLY \$49.99

DATA ACQUISITION UNIT

- Turn your Amiga into a sophisticated measuring instrument capable of measuring a wide range of data inputs.
- Sample and display events from microseconds to hours - with amplitudes from millivolts to 50 volts.
- A Hardware/Software package with very high spec including: -
- DIGITAL SCOPE DISPLAY - 2 channel inputs. Manual or continuous display. Timebase 500ms/div to 20µs/div. - accurate to 5%
- 6 bit flash conversion gives 2 millions samples/sec.
- Adjustable trigger level. 5 x zoom function.
- Memory scan
- Load/Save functions, waveform enhancement, graph displays.
- Hardware contains onboard RAM and Crystal dividers

PLOTTER DISPLAY

- 2 channel display
- Memory recall display
- Timebase range 1 sec to 10hrs per plot.

ONLY \$179.99 for hardware/software/please state A500/1000/2000

ROBOTARM

— Full Function
— 5 Axis Movement

- Explore the fascinating science of Robotics with this full feature Robot Arm.
- Human like dexterity - with 5 Axis of movement it is so versatile. It can manipulate small objects with amazing ability.
- Easily controlled using 2 Joysticks (any 9 pin type) or connect to your Amiga with our Interface + Software to give Computer/Robotic control (see Interface offer).
- Comes with Accessories including 'Finger' Jaws, Magnetic Attachment, Shovel Scoop, 4 Stabilizing Suction Base Legs, etc.
- Uses 4 HP2 batteries (not supplied) to power motor movement so uses no computer power
- Self contained, ready to use (except batts, joysticks).

Complete with interface/software

ONLY \$129.99

EXTERNAL 3.5" DISK DRIVE

- Single or twin drive models available
- Slimline extra low profile - only 6" long!
- Top quality NEC drive mechanism
- Throughport allows daisy chaining other drives
- Superbly styled case in Amiga colours
- Fully compatible
- 1 meg unformatted capacity per drive
- Good cable length for positioning on your desk etc.
- Twin drive model takes up very little space
- Value for Money - before you buy a drive please compare the features - these drives have NEC mechanisms housed in superb cases. Some products are built to a price and not a standard. Don't spend a few pounds less and end up with 'rubbish' - and remember you are buying from the manufacturer

ONLY \$169.99 SINGLE DRIVE

\$299.99 FOR TWIN DRIVE

512K RAM EXTENSION CARD

- Available with/without calendar clock option
- Simply plugs internally into a A500 slot
- Switch in/out with switch supplied
- Fitted in minutes - no soldering etc.
- With calendar/clock onboard time/date automatically booted
- Battery backed to retain time/date

you'll also want to engage an amphibious Walrus and a flying Manta—both of which carry a wide range of weaponry. The latter will be familiar to anyone who's piloted a flight simulator; its 3-D graphics and animation are very fast

and smooth. You can dogfight with enemy aircraft, or swoop down and hammer vital installations (which blow up in a very satisfying manner). Although you can opt for a joystick, the mouse provides firmer control and is easier to

use given the many icons throughout the program.

A game of Carrier Command typically takes days to complete. Combining the best elements of the arcade and strategy genres, it's one program you won't easily tire of.

SWORD OF SODAN

By Bob Ryan

IN SWORD OF Sodan you take the part of a young hero (or heroine—the game is an equal opportunity destroyer) who attempts to avenge his (or her) father's death by storming Castle Craggamoore and obliterating Zoras the Necromancer. Your only weapon is your enchanted sword and the lessons you learned on your granddaddy's knee.

The movie-like game is divided into levels that correspond to the stages of your

quest to destroy Zoras. You begin outside the city gates and must hack your way through the city and the castle until you reach the throne of Zoras for your final confrontation. Some levels require a brute force attack. Others demand delicate timing to avoid traps and obstacles. Finally, some levels require you to use magic items that you pick up along the way. Judicious use of these magic items—a zapper that kills your nearest opponent and a power

Sword of Sodan lets you meet interesting people.

shield that makes you temporarily invincible—spells the difference between success and failure. Use the magic on levels that don't require them, and you'll be in a terrible fix on subsequent levels. A winning strategy combines deft swordsmanship (with the joystick) with timely use of magic items.

The characters, backdrops, and digitized sounds are quite detailed and appealing. The

profusion of blood and mangled flesh you leave behind in your quest, however, is reminiscent of a B-grade slice-and-dice flick. Parents should preview this game before buying it for the kids.

My major complaint about the game is the time it takes to load each level. *Sword of Sodan* is a big game—it is spread across three disks—with lots of graphics. It can take an eter-

nity (in computer-game time, that is—equivalent to 10–20 seconds real-time) to load a level. An option to move the game to a RAM disk or a hard disk (greatly decreasing the amount of time spent watching the drive light) would be a welcome addition.

Although I was predisposed to reject this game as a mindless romp with sword in hand, I quickly became engrossed in

developing a winning strategy. I have yet to succeed, but I enjoy trying. If you look past the gore and the slow load times, you will too.

MENACE

By Louis R. Wallace

MENACE IS THE pure, undiluted, and concentrated essence of arcade action. Your goal is to destroy six levels representing the different areas of the planet Draconia. There is an ocean, a graveyard, a garden, a futuristic city, an ancient city, and a mountain range. Created in

64-color Extra-Halfbrite mode and displayed in overscan, the highly-detailed, smooth-scrolling screens are nearly equal to coin-op arcade-game graphics.

Over 60 varieties of nasties—about ten per level—guard the planet. Most travel in groups, and each has a

characteristic mode of attack. Some have no weapons, but you can be severely damaged just by contact with these (you can also suffer damage by touching the scenery). Others shoot projectiles, some of which can track you. Too much damage will cause your shields to give out, at which

point almost any contact can kill you.

If you blast every member of a wave, a bonus cube appears. You can grab the cube for its point value, but if you shoot it several times, the cube will turn into an icon. These icons give you temporary advantages—lasers, cannons, ex- ▶

The finale: Can you target the master?

tra acceleration, a force field, or a completely-restored shield. You can combine these attributes, and some of them are cumulative. Surviving all the waves on one level puts you face to face with a master guardian and his battery of soldiers. Only by destroying the guardian can you proceed to the next level, and to do so you must hit him repeatedly in one spot.

The animation is exceptional: enemies wiggle, roll over, rotate, rocket, undulate, fly, swim, bite, jump, and blast. My favorite is level three, the alien graveyard, with its skulls, ghosts, goblins, and bouncing heads. Digital sound effects, speech, and background music accompany the game. There are two levels of difficulty, and you can control your ship with a joystick or mouse. You can also save

high scores to the game disk.

Menace's most unusual feature is its virus-free guarantee. A side effect is that Psygnosis will charge you to replace any disk damaged by a virus.

If you like hot arcade action, try Menace. It is challenging, highly addictive, and as good as any other arcade game I've played.

TRACERS

By Gary Ludwick

FUN, FAST, AND furious, Tracers is anything but mindless. As in the arcade-based Tron lightcycle game, you maneuver through a grid, and, with the trail you leave behind, you try to cut off or box in your opponent before he does it to you. To this concept, MicroIllusions has added

enough new features to give the game a different flavor.

You can play against the computer alone or with a friend, or head-to-head with just your friend. You can opt

for joystick or keyboard, but I wouldn't face Tracers without a joystick. The music is excellent: There are several rhythms and tunes from which to choose. You can compete on any of 20 fields, and select the amount of power and number of lives to begin with.

ades that destroy you on contact. Add your nefarious opponent, and you have one challenging game, even at the easiest levels.

Unfortunately, Tracers is copy protected. You can make a back-up copy, but when you boot it, you will find you have

Outwitting your opponents takes concentration.

All this adds up to a game you can tailor to your skills.

On the grid, you will find randomly-placed tokens that bequeath extra lives and additional fuel. Occasionally a short-lived death square appears; if you cross it, all your opponents immediately expire. A particularly ingenious feature is a block that travels on your trail: Can you time your moves just right and cross over this moving square? If so, you gain bonus points and break into a new area. There are various restricted areas, too, and block-

a demo version with the words "Pirated Copy" emblazoned across the top.

Tracers is a winner. Its many variations and its quality presentation make it a rarity: a game that few people will tire of or master.

ard is an elusive target, so you race toward him. Every time you jump to avoid the missiles, though, you drift backward. All the while your vitality is dropping.

If working your way through scenes like this is your idea of fun, you will enjoy Warlock. As the warlock, you are in search of the stolen Karna, a jewel

As you sharpen your skills, you can lower your starting vitality and power levels to make completion more difficult. The provision for only one life per game and lack of a save option makes Warlock a challenge; every time you "die" you begin again at the first screen. Perhaps the game's authors fear Warlock

Searching for the Karna, you encounter help and hindrances.

possessing magical powers. On the way to finding and doing battle with the Karna's thief, you must deal with an engaging band of adversaries—from zombies and kraken to the four elements—armed only with your trusty scepter. Luckily, eight magical objects are scattered en route (there are 20 screens with two levels each) to aid you in your quest.

The game is not novel, I admit, but Warlock stands out as a well-crafted member of its genre. The graphics are imaginative and nicely executed, scrolling between screens is very smooth, animation is crisp, and sound effects are varied. Above all, it has that elusive, satisfying feel that lets you completely lose yourself in the alternate reality on the screen.

would otherwise be too easy. I look forward to vaporizing the wizard on level twelve and finding out if their fears are justified.

Warlock

CYGNUSED PROFESSIONAL

The Amiga's repertory editor.

By Patrick Quaid

WHEN COMPARING TEXT editors, we tend to consider their advanced and esoteric features, even though the feel of the editor is ultimately more important.

With CygnusEd Professional, you need not give up workability for features; the program excels in both areas. It is fast, clean, and precise. Text scrolls extremely quickly, searches and screen redraws are almost instantaneous, and even at the highest key-repeat speeds, the editor never, for example, continues scrolling after you let up the cursor key.

CygnusEd Professional also has just about all the options you could ask for. Search and replace, block commands, multiple windows, and all the other things we have come to expect from a good editor are included, but there is much more. The editor can cut and paste vertical and horizontal blocks of text, issue AmigaDOS commands, delete and undelete words and lines, and even print files. You can define macros for almost any combination of keys, and redefine keys, too.

WALTZING WITH INTUITION

CygnusEd Professional's cohesive, efficient interface makes good use of Intuition, but doesn't rely on it. It runs from the Workbench and the CLI, and can create Workbench icons. The distribution disk includes a program called Ed, which, when you use it to invoke CygnusEd from the CLI, affords you additional options. For instance, Ed can make the CLI prompt return immediately or cause it to wait for CygnusEd Professional to complete its work. It can retain its link to the CLI so you can run DOS commands from the editor, or sever the link so the CLI window can close. The editor offers both menus and keyboard shortcuts, places requesters under your mouse pointer on screen, and can employ the mouse to scroll, mark blocks, and organize windows. String requesters retain their values, and the file requester remembers the directory it is

working with; all requesters are keyboard controllable, too. The program multitasks elegantly: It can go dormant (so you don't have to exit), and be reawakened with a hot-key combination.

One of CygnusEd's most surprising aspects is its flexibility. You can specify mundane things like screen size and screen colors, whether the program uses its own screen or a Workbench window, and whether to display spaces, tabs, return marks, and escape codes. More interestingly, though, you can make decisions about the editor's fundamental operation. For example, you could make CygnusEd Professional work similar to AmigaDOS's ED by allowing the cursor to move anywhere on the screen and by having the program convert tabs into eight spaces. Reversing those decisions would make it work like the public-domain editor, MicroEmacs. You can design macros to work like either editor's command set (in fact, the distribution disk contains a set of macros that mimics MicroEmacs' control keys).

You can save these parameters—in different configurations for each type of file you edit—in environment files. When CygnusEd Professional first runs, it looks for an environment file to match the same suffix of the edit file you specify. If your command line is "ed filename.c," for instance, CygnusEd Professional will look for a configuration file called "CED-Defaults.c." The program also loads a default macro-definition file when it first runs, although apparently not with the same suffix feature.

DOING THE LIMBO ROCK

CygnusEd Professional was designed with the programmer in mind. It handles multiple files and windows with great dexterity, has an auto-indentation key, supports markers in the file, and can even find matching parentheses and brackets. Because CygnusEd's multiple-window system works so effortlessly, I needed fewer hard copies of other files when using it to program.

All of CygnusEd Professional's features are accessible to external programs. The package supports William Hawes' ARexx interface language, and includes some ARexx example programs, including one for controlling CygnusEd from a C program. This remote-control function lets you integrate CygnusEd Professional with other programs; for instance, you

could write a program to read a compiler-generated error file, then have the editor display errors and send the corrected file to the compiler.

While CygnusEd Professional is not a word processor, it has features that make it useful for writing things other than programs and batch files. It can wrap words at the right border and perform limited paragraph reformatting. ASDG (CygnusEd's publisher) has also included the text-formatting program Proff on the distribution disk, which helps make ungainly text files presentable. Like most good text editors, you can enter control and escape codes directly into the text for printer regulation.

ASDG supports CygnusEd on CompuServe, BIX, and UseNet bulletin-board systems, as well as by phone. The well-written manual consists of about 90 pages. The single, bootable, non copy-protected disk includes several example batch programs, and a utility for recovering files from memory after a Guru Meditation. CygnusEd Professional is probably all you want in a text editor. But while I rate it a perfect ten, MicroEmacs, which is included for free on the I.2 and 1.3 Amiga Extras disks, is an eight or a nine. Still, CygnusEd is good enough to win you as a convert. If you demand the finest and can justify the expense, this is your editor.

the resulting film into a loop, and check for needed movement and timing changes. After making corrections, the animator had to repeat the entire process—starting with re-photographing the sequence—until the animation ran smoothly. This method required a great deal of time, patience, and money... alas, it seemed that high-quality animation was beyond the reach of all but big-name, money-backed studios. That is, until Cel Animator galloped in to save the day.

Cel Animator, from MicroIllusions' Photon Video series, cuts production time. It requires you to photograph (digitize) each picture only once (it also includes some paint-program-like features, so you can make minor corrections to cells without having to exit and load a dedicated paint package). Frames are stored in RAM and can be displayed in any order, at normal or slow speed. You can run your sequences backward as well as forward, and the program gives you complete control over cell delay times. You can add new cells to an existing animation at any point and repeat them any number of times, then store your creations on a floppy or hard disk. These and other features put it in a league well above simple page-flipping programs.

Cel Animator works with any graphics-creation program that saves in IFF or anim format; it can decompress anim files into IFF images, so you can alter frames individually. In my tests, files created with programs using early and special versions of the anim format—including those from Animate 3D (Byte by Byte), PageFlipper Plus F/X (Mindware International), and Video Effects 3D (InnoVision Technology)—would not load. Because such programs generally offer an IFF-save option, though, you can work around this fairly easily.

PITTER PATTER

Cel Animator further one-ups traditional animation methods with its option for synchronizing video with sound. Using exposure sheets, you keep track of dialogue and sound effects, created by any audio-digitizing program, and match them to individual cells. The exposure sheets are separate text files that you can save as such or print.

While Cel Animator supports all Amiga screen resolutions—including HAM with overscan—the program has difficulty with screen sizes larger than 352×480 interlaced and 704×480 high resolution. Loading any such frames into Cel Animator produces a black screen display. For instance, all Aegis products use the broadcast FCC (Federal Communications Commission)-approved 384×480 interlaced and 768×480 hi-res overscan resolutions, so when you load one of these frames, Cel Animator displays a blank screen instead of the image. This is unfortunate, as it limits Cel Animator's

Choose your screen resolution here.

usefulness, especially in professional broadcast applications. It is also surprising, as MicroIllusions' Photon Video: Transport Controller, a companion program, does load such frames.

Once your animation is assembled satisfactorily, it is time to select from the several rendering methods available. The anim format provides an efficient way of replaying the piece. The best way to record the cells, however, is directly to videotape using a single-frame animation program (such as MicroIllusions' Transport Controller), which gives you access to a single-frame controller and an editing VTR (video tape recorder).

The manual, written by veteran animator Heidi Turnipseed, is comprehensive and very easy to understand. It assumes no prior knowledge of animation, and the tutorials help even neophytes produce great results. It is chock

full of professional hints and tips, and one section provides a quick reference to all the program's features.

Although Cel Animator requires just one megabyte to run, it can fully utilize up to eight megs. The program is not copy protected; you can transfer it to a hard disk. Cel Animator's interface is mouse-and-menu operable, and keyboard options are available for many functions. Despite its few limitations, this package is extraordinary. Its capabilities and simplistic approach put professional-quality animation within the reach of those who could not have considered it previously. I highly recommend Cel Animator to anyone involved or interested in animation.

MICROFICHE FILER PLUS

Vis-à-vis power.

By Loren Lovhaug

WITH THE MICROFICHE-film readers in libraries, you move a magnifying mechanism over a fiche (film containing reduced images of printed pages) to examine data. The Microfiche Filer Plus database manager works similarly. In the program's fiche window, miniature representations of all the records in your database are laid out in rows. You move the magnifier—via mouse—over the fiche. As you do, the magnifier enlarges the data in its sight, displaying it in the magnification window. The presentation is impressive, as records scroll in and out

of the magnification window quickly and fluidly.

WHAT CAN YOU SEE?

The effectiveness of this approach depends on the kind of information you need to organize and on how you use that data. It is ideal for frequent inspection of records in a small number of fields—for address-and-phone or price lists, and disk-catalogue databases, for example. Also, because of its visual nature, Microfiche Filer Plus is particularly well suited for applications wherein picture fields are crucial to the record-selection process. The program has excellent facilities for displaying IFF images of all types, including HAM, and enables you to create thumbnail images for inclusion in your display and print forms. If you must select records from many fields in a large database, however, or need to work in a complex relationship structure between fields, the visual metaphor is significantly less effective.

Microfiche Filer's heavy reliance on standard Intuition-style gadgetry makes the program easy to grasp, and Software Visions has done a wonderful job with keyboard support as well. All of the operations contained in the pull-down menus have logical keyboard equivalents, many of which are mnemonic. Additionally, several keyboard sequences aid in entering and editing text. By shifting the cursor keys you can jump to the beginning or the end of a line or field, and pressing the Tab key moves you forward a field while shifting it sends you back one.

There is just one area in which this support is lacking. Ideally, you should be able to size boxes via the keyboard on the basis of character height and width, particularly since Microfiche Filer Plus supports only the topaz font. The sizing of layout boxes, however, is entirely mouse- and gadget-controlled, as is the field-selection process. Nonetheless, Microfiche Filer Plus' form system is very flexible. With the form editor you can design multiple screen layouts, record-entry templates, and forms for printing to all Preferences-supported devices and to disk.

The program's report feature is probably inadequate for most people's report-▶

✦ **Exploring Japan with Jet (Part 2)-** SubLOGIC's Jet program now includes a free Japan Scenery Disk. Last month we took you on a guided F-16 tour of Tokyo.

This month we'll follow the Japanese coastline on a cross-country flight from Tokyo to Osaka. Starting from Tokyo International Airport (coordinates North 18201, East 32787), take off and turn to a heading of 220 degrees until you reach the coast. Turn right to a heading of 235 degrees and fly for about twelve minutes at five thousand feet altitude until you can see Hamamatsu Airport below you (see Tokyo area chart). Turn right again to a heading of 305 degrees and fly to Nagoya, another highly detailed city. At Nagoya, turn left to a 240-degree heading that will take you straight to Osaka. When you find yourself flying over Osakajo Castle, begin your descent for a landing at Osaka International. This entire flight takes only twenty five minutes at Mach 1.4.

✦ **More on Scenery Disk # 9 -** As announced in last month's column, this newest Scenery Disk covers the midwestern United States in incredible detail. The city of Chicago now has many more buildings, landmarks, and visual cues than before. St. Louis Missouri is also packed with scenery, bordering a super-realistic rendition of the Mississippi River that runs from La Crosse Wisconsin to Dyersburg Tennessee. The Cincinnati sectional area features a cluster of more than thirty mountains in the Allegheny region stretching from Tennessee to Pennsylvania. With over 150 detailed airports and numerous VOR and NDB transmitters, this disk covers hundreds of thousands of square miles with enough scenery surprises to keep you exploring for a long time.

generation needs. In fact, it would be more accurately described as a total mechanism, as its only functions are to total numeric fields and count non-null items in each field.

POWER LIFTING

Microfiche Filer Plus is marketed not as a replacement for the original Microfiche Filer, but as an alternative for those with more sophisticated data-management needs.

The addition of a calculation-numeric field type in Microfiche Filer Plus addresses a weakness of its predecessor. You can enter simple arithmetic formulas in these fields, and set them up to perform calculations on other fields. This facility works fine. The inclusion of only simple arithmetic operators, however, severely limits the function's usefulness. Noticeably missing are date and date-calculation support, logical and financial operations, and statistical functions including the simple average, mean, and standard deviation.

Another feature that caters to power usage is programmability. Microfiche Filer Plus includes a port for the increasingly popular ARexx macro language. ARexx is an excellent choice for this application: It is very powerful, especially in terms of character and data manipulations, and is fast becoming a standard. Microfiche Filer Plus relies upon ARexx too much, however. By itself, the program is incapable of such common tasks as loading and saving record-selection criteria, batch updating records, executing relational searches, and exchanging data with other applications. To perform these operations using Microfiche Filer Plus, you must create ARexx programs. For some people—especially those who use ARexx for frequent inter-task communication—this might be preferable. But while ARexx is not a difficult language to learn, many people may find the prospect of ARexx programming intimidating. Indeed, the fact that Microfiche Filer Plus derives most of its sophistication from a text-based, non-intuitive programming environment is inconsistent with its visual metaphor.

Microfiche Filer Plus' approach is unique and perfectly suited to many applications, and its ARexx interface affords great power and flexibility. The lack of built-in menu-selectable sophistication and heavy dependence on ARexx's merits, however, are crippling.

B.A.D.

*Get down with AmigaDOS's
funky floppies.*

By W. Jeffrey Blume

DISK FRAGMENTATION IS a problem common to all disk-based personal computers. As a disk becomes filled, there frequently is no contiguous space in which to write a file, so the system must scatter blocks of data where it can find room. This fragmentation causes the drive head to travel across the disk numerous times as it reads a file, while the protesting drive emits the familiar gronking sound. The result? Input and output (I/O) are slowed significantly.

The B.A.D. (Blitz Amiga's Disk) optimizer utility from M.V. Micro analyzes disks, and organizes and rewrites them so that the header and data blocks of any given file immediately follow one another. The resulting decrease in disk-access times can be astounding.

GOOD FOR BAD

B.A.D. differs from disk-caching programs in that it does not use computer memory to attain its speed; thus, results are not lost if you remove the disk or reset the system. The drawback is that as you continue to use the optimized disk to store or modify data, its structure begins to fragment again, and eventually you may need to reprocess it.

When you load B.A.D., a small win-

dow opens to present its straightforward, entirely mouse-driven interface. One gadget toggles whether the program is to process a hard disk or a floppy, and another toggles between B.A.D.'s Workbench and CLI modes. Two more gadgets, Blitz and Quit, initiate processing and exit the program. Source and Dest (Destination) gadgets are displayed for each floppy drive attached to the system, while a single gadget is shown for each mounted hard-drive partition. At the bottom of the window, a string gadget reports the status of the disk being processed.

B.A.D. can read a source disk and write the optimized data to a second disk leaving the original unchanged. Alternatively, you can assign source and destination as the same drive. Processing with two drives requires at least 370K of free, contiguous RAM, so a 512K Amiga running in two-drive mode will not have enough memory to multitask. Because the single-drive mode requires only about 60K of memory, you might expect it to work on a 512K Amiga with one drive. I tested it on an A1000 with 512K and one drive and found that B.A.D. would not load under Kickstart 1.2. While the instructions do not specify a particular version of AmigaDOS, the program did load under 1.3. B.A.D. requires roughly 24K of RAM to process each meg of space on a hard-disk partition (470K of free contiguous RAM for an average 20-meg partition).

According to the on-disk documentation, B.A.D. will process a disk on a dual-drive system in two to five minutes, while it may take as long as 30 to 45 minutes with a single drive (depending on how full and how fragmented the disk is). In actual tests, B.A.D. turned in much better times—as fast as 19 minutes

Set yourself up for formatting.

for a 99-percent full disk on one drive.

B.A.D. processes hard-drive partitions in place. There is no partition-to-partition option, so for hard-drive and single-floppy processing, the documentation recommends that you back up the data first. Once the process has begun, you cannot abort it; if it is interrupted by a crash or reset, the target drive will be corrupted. Hard-drive processing can take 30–45 minutes for every 10 megs in a partition.

B.A.D. performs some optimizations designed specifically for AmigaDOS. Depending upon your preference for interfaces, B.A.D. will organize disks for best performance in either the Workbench or CLI environment. In the Workbench mode, it groups the .info files of each drawer together. Disk and drawer windows open dramatically faster: Prior to processing with B.A.D., a sample hard-drive window (with AmigaDOS v1.2) took over six seconds to display its contents; after processing it opened in about two seconds. Such results are common for floppies, too. While increases on FastFileSystem partitions are not as dramatic, the improvement is still quite noticeable.

Both Workbench and CLI modes give much faster directory access after processing; a typical DIR OPT A from the root of a floppy can take half the time. Because the Workbench mode yields almost as great a speed increase to CLI operations as the CLI mode and improves Workbench operations, it is the clear choice for users who work with both interfaces.

While it is true that you can achieve some of the benefits that B.A.D. affords using the AmigaDOS command COPY DF0: TO DF1: ALL QUIET, you do not get as many optimizations. The command accelerates Workbench only minimally, and it can take as long as 13 minutes, versus B.A.D.'s five minutes.

Should B.A.D. encounter difficulties ►

- 880K Capacity

during processing it will report them in specific, helpful terms in an error file called RAM:BADMess and in the status string-gadget.

I experienced no problems running B.A.D. on an expanded Amiga in an intensive multitasking environment. As the program easily processed a disk in single-floppy mode, my text editor made saves to a hard drive and a second floppy, I plotted a hi-res interlaced Mandelbrot, and five other programs ran in the background. I also was able to multitask from one partition while B.A.D. processed another on the same unit.

M.V. Micro is a small company. My calls for technical support were often greeted by an answering machine, but I received return calls. I also found the company receptive to input. Unfortunately, the only documentation is an on-disk .doc file—about six printed pages. The program's operation is so straightforward, however, that the file is adequate. B.A.D. is not copy protected, and it gives Amiga disk I/O a great performance boost for a modest price.

DRAW 2000

We're getting close to home.

By Stephen Ellerin

ALTHOUGH IT IS billed as a totally-new program, Draw 2000 by Aegis appears to be a spiffed-up version of the company's earlier CAD (Computer-Aided Design) program, Draw Plus.

The package comes with three disks: the regular program disk, an alternate which promises a further 50% increase in speed for those who have a 68020 with a 68881 math coprocessor, and one containing libraries of electronic, electrical, plumbing, floor plan, and furniture parts.

WHEN THE CHIPS ARE DOWN

Draw 2000 runs with 512K, but Aegis recommends a megabyte of memory or

more. No matter how much RAM you have, however, expect to be constrained by chip-memory limitations. I found it impossible to open more than two windows in the interlaced, high-resolution mode. Even then, unless my second window matched the proportions of the main one, most requesters would not open (commands that don't require requesters work fine). To overcome this, Draw 2000 introduces a medium resolution, at some sacrifice in detail, and a four-color Workbench mode (which increases both screen-redraw speed and the number of windows you can open), at a greater sacrifice.

As you work, you can shift into Workbench mode for memory-intensive operations and back to a higher resolution for more detail. Although I couldn't get Draw 2000 to shift directly from hi-res to medium, it would shift from high, to low, to medium. (Some of the 16 colors in the higher resolutions may be transposed to blue in Workbench mode and thus will not show up against the lo-res background.) All windows accepted a grid of one inch square—the smallest I tried.

You can start using Draw 2000 right out of the box, but the documentation gives you an edge. The spiral-bound manual begins with the basics, and a genuine tutorial takes you step-by-step through designing a floor plan as it introduces you to most tools. Commands are described in the order they appear in the menus, and each explanation includes how-to instructions. Some descriptions, however, are not as clear as they should be. Also, instead of explaining every aspect as it is mentioned, the manual often refers you to another chapter for a fuller description. This is distracting; a compromise would be to summarize the procedure.

EASY DOES IT

Draw 2000 is the easiest-to-use CAD system I know of. You can draw freehand or use previously-created parts—shapes that you have grouped into objects. The first group of tools draws lines, rectangles, polygons of any shape, arcs, circles, ellipses, text, and dimension (measurement) lines. To retrieve a tool, simply select it from the Tools menu or press the appropriate function key. You can create

many of the objects from the keyboard, by positioning the cursor at the intended origin, touching the Escape key, and entering numeric values.

With the second category of tools, you can drag, clone, erase, or re-size any object, change its color, or grab a hook to change its shape. You can also rotate the object around any axis, and, with the powerful Stats command, change the height, width, angle, and starting coordinates.

The Group commands let you undo your last action, and cut, paste, or erase objects contained in a marked window. You can modify the pattern, weight, and color of the line, change the size, proportions and angle of all objects in the window, create a new part, mirror things in eight directions, and create an array. Numeric Edit is the most powerful command: It accurately changes height, width, angle, and so on to the values you enter from the keyboard.

While most tools remain in effect until you choose another, you must select Group commands from the menu each time you need them. Ironically, these functions often require several tries to box precisely. Only half of these commands have keyboard equivalents, and of those, one does not respond.

The Display menu controls what you see. You can toggle Grid, Ruler, and screen-wide cross hairs, open as many windows as memory permits, zoom in or out, alter colors, and select layers for display. Other menus let you change grid size and pattern, units (decimal, feet, or metric), drawing size, and font size. You can toggle the Grid Snap (when it's on, any click on the screen snaps to the nearest intersection of grid coordinates), and whether to fill objects with one of eight patterns. The Smoothing option rounds any object, and the Help button summons a Fast menu.

While the options are many, their placement in the menus seems haphazard, which makes them inefficient to use.

SAFE ON FIRST

Draw 2000 allows you to save any number of color palettes. You can save an entire drawing or any window as an IFF file, and a new option lets you save in a format compatible with Aegis' Modeler 3D.

You can also save settings, but while ►

THE TOP 10

- ❑ **#131 PacMan '87** - Great sound and graphics. Adds new elements to PacMan. Saves Top 10.
- ❑ **#127 Wheel of Fortune** - A great computer version for multiple players. It even talks.
- ❑ **#23 Monopoly** - Enjoy great graphics and sound while playing three tough computer opponents.
- ❑ **#37 Business Programs** - Included are an address book, an amortization program, a talking mail manager, and a label printer.
- ❑ **#27 Amoeba Invaders** - A better Space Invaders!
- ❑ **#140 Virus Killer** - Everyone needs this! Makes it easy to detect and eliminate known viruses.
- ❑ **#115 Word Processor** - Lots of features.
- ❑ **#134 Applications** - Label maker/printer, grocery list maker, and AMIGazer - a star viewing program.
- ❑ **#142 Q-Bert** - Like the popular arcade version.
- ❑ **#139 Bull Run** - Great Civil War strategy board game, with impressive graphics and sound.

THE BEST OF THE REST

BUSINESS/HOME

- ❑ **#116 Business II** - VC-Spreadsheet, HP-10c calculator, and several diversions for when the boss isn't looking!
- ❑ **#117 Business III** - DataBase, a bunch of great new fonts, RSLClock-great clock utility, AmigaSpell.

LANGUAGES

- ❑ **#9 FORTH** - Two versions of the FORTH programming language.
- ❑ **#50 XLISP** - A version of LISP, the artificial intelligence language. Includes documentation.

COMMUNICATIONS

- ❑ **#4 Communications** - Starter and Aterm are both included. Both run from Workbench or CLI and are comparable to communications packages selling for \$50+. Full control of baud rates, phone directory, all protocols, auto chop of files, and many other extras. Works well with the Avatex 1200 modem and others. Source code included.
- ❑ **#90 Modem Madness!** - Terminals include StarTerm, ATerm, and Kermit. Telecommunication utilities such as Archive are also here. Other types of programs and utilities are also included in the price of admission.

UTILITIES/APPLICATIONS

- ❑ **#60 AmigaBasic** - Two programs that are truly of commercial quality, Cell-Animate and Graphit. Some Deluxe Paint picture files are also included.
- ❑ **#97 Tutorial Disk1** - A disk full of information and programs to instruct Amiga Programmers and users. Several C & ASM source files are included.
- ❑ **#98 Tutorial Disk2** - More of the best of Amiga Information.
- ❑ **#101 Utilities** - Many new utilities like Timeset - a time setting utility and DirCopy-a great copier (very quick), and about a dozen more. Some new fonts are also included on this disk.
- ❑ **#105 Potpourri I** - This disk contains several different kinds of programs, some of the highlights are: PopCLI2-evokes a new CLI window at the press of a button; PSound-sample sound recorder and editor; 3-D Breakout; DiskCat-catalogs and organizes disk files; IconMaker-makes icons for most programs so that they can run from Workbench; FKey-template maker.
- ❑ **#129 Amiga Utilities II** - A hard disk backup; Target-sounds a gunshot whenever the left mouse button is pressed; Dpaint Tutor; WinSize-change window size from CLI easily, and lots more.
- ❑ **#130 Videomaker Utilities** - This disk is packed with utilities to make your desktop videos easier to produce and more professional looking.

- ❑ **#133 DOS Helper** - A program designed to help you with the AmigaDOS commands. Can be activated from icon of the CLI. Supports multitasking, so that you can refer to it when you need it. As usual, there are other good programs included on the disk.
- ❑ **#135 Applications II** - Long Movie-plays several IFF pictures in fast succession, creating animation. QuickBase-a mail manager DBase. Persmail-a DataBase for keeping records of friends, family, associates, customers or employees. MORE.
- ❑ **#146 Calendar** - A very good personal calendar for birthdays, holidays, meetings, bills and other events. Excellent graphics. Calendar program also has a diary. Other programs include some graphics and Checkbook.
- ❑ **#150 Textcraft+ Demo** - A demo of a very good word-processing program of high quality. Menu driven. Has a lot of helps to show you how. Textcraft+ also has a Speller Check available.

SOUND/MUSIC

- ❑ **#18 Future Sound Demo** - Another great sound demo of digitized sound. Includes the wicked witch of OZ, breaking dishes, sea gulls, car crash, ducks, others.
- ❑ **#30 Super Sounds** - Great digitized sounds from movies like Star Trek, 2001, James Bond movies, Star Wars, and Starman. Is it real or is it the Amiga?!!!
- ❑ **#77 Instruments** - Turn your keyboard into 25 different musical instruments.

SLIDE SHOWS

- ❑ **#1 Norman Rockwell** - 17 beautiful digitized Rockwell paintings in this self-running slideshow presentation. You've got to see these!
- ❑ **#55 EA Demo and Polyscope** - More great graphics for your enjoyment.
- ❑ **#67 DPSlide8** - Over 30 slides of all sorts on this self-running slideshow.
- ❑ **#94 Diga-View** - This one shows the digitizing process in stages. Several good pictures are included. Other programs also included.
- ❑ **#95 DigaSlide11** - Another in the great series of slideshows with great artwork. Self-running with over 25 pictures.
- ❑ **#108B Juggler** - Famous demo that shows the beautiful graphics of the Amiga and just how powerful this program is. It is easier to run than 108A, but only has the one demo on it.

GAMES

- ❑ **#38 Basic GrabBag2** - Around 25 programs of various types. Many of these are must-haves. At less than \$.20 each, you can't go wrong!
- ❑ **#44 Games3** - More great games including Life, Vegas Slot Machine, Reversi, others.

- ❑ **#52 Basic Games** - Tons of ABasic games - discover some treasures!
- ❑ **#61 ABasic GrabBag1** - Only about 100 of all types!!!!
- ❑ **#102 Sinking Island** - Return to Sinking Island is an excellent adventure game. Well worth the price - hours of enjoyment!!!!
- ❑ **#114 Potpourri X** - Othello, A key-shortcut program for AmigaDos. Various new tools, automatic printer-driver generator, much more.
- ❑ **#118 Great Graphic Games** - Includes Missile Command, 2-D Triclops, Cosmo-asteroids clone, BrakeOut, Yatzee, Hack and more.
- ❑ **#121 Backgammon** - A great game from David Addison.
- ❑ **#122 Solitaire** - Two versions by David Addison.
- ❑ **#123 Cribbage** - Take on the computer or a friend.
- ❑ **#124 Milestone** - A great computer version of Miles Bournes by the author of Monopoly for the Amiga, David Addison.
- ❑ **#125 Othello** - A great 3-D version of this popular game.
- ❑ **#128 Space Games** - Cosmoroids (like asteroids) and Gravity Wars highlight this disk just full of games.
- ❑ **#137 Blackjack** - A full-featured game which allows pair-splitting, double-down, etc. Bandit-play the slot machines without going to Vegas!!! More.
- ❑ **#141 Dominoes** - Dominoes game with great graphics. Also Tic Tac Toe, Drawing and Molecules programs.
- ❑ **#147 Jackland/Graphics** - Adventure clue game. Also some great pictures (graphics), a useful utility called Quickbase, and a fun program called Thingies which you will enjoy!!!
- ❑ **#148 Boulder Dash** - Very popular game with excellent graphics and has several challenging levels. This disk is full- It has Othello, Life3 and many useful utilities.
- ❑ **#151 4 in a Row** - A fun, but challenging game you play against the computer. There is an excellent Demo "MandFXP-D3", a utility or 2 and the fun TARGET - A weirdo thingy.

MISCELLANEOUS

- ❑ **#88 Amiga Basic Programs** - Over 50. Games, utilities, applications, entertainment, and finance. Also included is a program that allows you to use IFF files in your Amiga Basic programs.
- ❑ **#119 mCAD** - A full-featured computer-aided design program.
- ❑ **#136 Graphics2** - Border Set-useful for desktop publishing and video, making cards, coupons or menus, and your own artwork. Xicon-allows you to run AmigaDOS commands or programs from Icon.
- ❑ **#144 Christmas Animations** - 10 beautiful scenes and graphics with sound. Great scenes include: Lit Candle, Elves, The Christmas Tree, The Manger, Season's Greetings, Holly Wreath, Chimney Smoke, Church Bells, and Walking Home.
- ❑ **#145 Animations 3** - More Great Animations. 3 very good demos plus 3 workbench pictures and Blobs.

chip-memory shortage complicates this on one hand, the same factor makes it almost essential on the other. All screens default to a five-foot square grid (you can select feet, meters, or absolute values), and because the main screen accepts a grid no smaller than one foot square (without zooming), you must open a second screen to work in detail. In hi-res, however, the program often consumes so much memory that it cannot display the requester that lets you alter grid size. Fortunately, by selecting Quit, you can get to a requester that lets you save settings; reentering the program then causes your second screen, if no wider than 21 feet in scale, to default to a one-inch square grid.

Draw 2000 supports all Preferences printers, but to accommodate a large drawing, you must divide it into sections, print one 8½ × 11-inch sheet at a time, and tape them together.

Because plotting a full-size drawing can take up to an hour, Aegis designed their plot method to allow multitasking. You save your drawing as a plot file, which the program then sends to your plotter while you continue working. Un-

fortunately, the program will only save plots to the Draw 2000 disk, which is too full to accept a drawing.

An Aegis technical representative offered two alternatives. You can select Save As from the Project menu and Plot from the submenu, then give the file a unique name, and send it to your plotter from the CLI. The second option gets the rendering function to work but does not enable you to multitask. It involves selecting Save As and Plot as above, and then typing ser: (or par:, if your plotter connects at the parallel port).

SPLISH-SPLASH

Given the investment Aegis has made in this product, I find it puzzling that they have not polished it. Draw 2000's heaviest millstone is the program's insistence on drawing all your on-screen corrections twice. This nuisance becomes infuriating when the redraw involves or borders text (the program renders text very slowly), or when the Undo command redraws the entire screen. The fact that most commands act, by default, on the objects you drew first—even after you change the active layer—is illogical,

and although you can easily set your drawing to a scale of one-quarter or one-half via the Format command, you cannot plot a three-quarter or three-eighth scale from within the program.

Among the things I would like to see added to the program are a Spline command and a Change Layer command that could reassign the layer of all items within a boxed area.

Draw 2000's operating speed is minimally acceptable by professional standards. The program's design flexibility is excellent: You can move, duplicate, alter, and make corrections easily, and lay out your project quickly. This is the only professional CAD program I have seen with a true Amiga interface. Draw 2000 is not perfect, but it is the best Amiga CAD program I know of.

PROSCRIPT

A step in the right direction.

By Chris Dickman

WHILE NEW HORIZONS Software designed ProScript primarily to add PostScript-printer support to the firm's ProWrite word processor, ProScript's file-conversion abilities afford PostScript access to Scribble! (Micro-Systems Software), TextPro (Abacus), and Textcraft (Commodore) owners, too.

TWO TO TANGO

ProScript provides two ways to access the fonts in a PostScript printer. The most primitive is to compose your document using the skimpy, bitmap Amiga-system fonts. You then set up a font-substitution list which, at print time, replaces a PostScript font with the Amiga font. A problem with this approach is that text displayed on the screen only roughly corresponds to what emerges from your printer, because the substituted fonts have different character widths. If you are printing files con-

verted from Scribble!, TextPro, or Textcraft, however, this is your only option (unless you want the document to print in Topaz). Your converted files will thus print in only one PostScript font; there is no way to mix typefaces or type sizes within these documents.

You can position, scale, and rotate pages.

ProWrite users have access to more, but by no means all, of the power and flexibility of PostScript printers. To display type on the screen that corresponds accurately to what will appear on a Post-

Script-printed page, an application program must have access to font metrics files, which contain information on font widths, and screen fonts, which display the fonts on the screen. ProScript has these sets for Helvetica, Times Roman, Courier, and Symbol fonts. Because the program lacks such files for the remaining fonts resident in PostScript printers, however, you must resort to the primitive font-substitution technique to use them. To New Horizons' shame, nowhere on the package is this limitation pointed out. The documentation sheepishly mentions that the many screen font and metrics files supplied with Gold Disk's Professional Page work with ProScript—which is dandy if you happen to use that program. Otherwise, tough bananas.

Once the metrics and screen font files are installed, you simply use ProWrite to select text in your document, and choose the desired font from a menu. The screen fonts look a bit clunky at medium resolution, but at hi-res they are quite respectable. While you can convert documents produced with the other three compatible word processors to ProWrite format, then open the files under Pro- ▶

Write and assign fonts, I question the usefulness of this option. After all, how many people own ProWrite *plus* Scribble!, TextPro, or Textcraft?

PLIANT PRINTING

ProScript must be running in order for you to print to a PostScript device. Thankfully, the program multitasks nicely, allowing you to edit documents while printing. Through requesters, you can set a range of print options. The General Setup requester allows you to specify between 2 and 256 shades of gray when converting color images to the black-and-white world of laser printing (although ProWrite 2.0 only supports 16). A related capability lets you establish the halftone screen density and the number of halftone cells per inch—both help control how PostScript renders your bitmap images. Page Setup lets you switch between portrait and landscape modes, as well as scale, rotate, and position your page. ProScript also lets you save documents to disk as ASCII PostScript files, which can be output by a service bureau with either a garden-variety laser printer or a high-resolution device.

ProScript is useful but limited. With improved access to resident fonts and a more comprehensive approach to the conversion of other word-processing formats, I would praise ProScript. As is, the program does not meet current PostScript standards.

DELUXEPRINT II

See the signs and believe.

By Morton A. Kevelson

DELUXEPRINT II LETS you print specialized documents such as signs, banners, and cards faster and easier than general-purpose paint and desktop-publishing programs.

Its Intuition-style interface makes DeluxePrint II easy to use. On the working screen you see a color palette on the left, a miniature version of your project in the center, and control gadgets on the right. The Preview function lets you view your project up close; you can even adjust the magnification.

Seven formats accommodate your creations. Banners print sideways; they can be up to $8\frac{1}{2} \times 22$ inches. The greeting-card format prints quadrants on a sheet—two upside down (you then fold the sheet in half twice). You can make labels up to $4\frac{1}{4} \times 1\frac{7}{8}$ inches, and resize this format to print in standard business-

card size. Signs can be laid out as full pages or in four sections per page. Letterhead format fits your design into the upper third of a page, and finally, you can print a one-month calendar to fill a sheet.

LAYING IT ON THICK

All formats are assembled from four elements: a background (any IFF image), icons (44×52 -pixel brushes), borders, and text. DeluxePrint II comes with a disk of prepared backgrounds, borders, and icons (unfortunately the manual does not show printouts of them) that you can modify. You can also create your own graphics (the program contains enough drawing tools to handle simple tasks), or import them.

Each element has a designated priority (layer), and except for borders, the components can be manipulated and positioned independently. Priorities determine how elements will be superimposed on one another; when overlap occurs, the higher-priority item prints on top of the other. The background constitutes the bottom layer, upon which everything else is placed.

The center layer accommodates up to nine different icons (graphic images), and as many copies of them as you please. You can even snip out parts of the background to use as icons. Icons are prioritized, too, based on the order in which they are placed; this order is maintained when images are repositioned. ►

HIGHER PERFORMANCE...AND CHEAPER TO BOOT!

Circle 162 on Reader Service card.

The top layer consists of text; you add lines of up to 80 characters one at a time, positioning and modifying them individually.

Borders are separate entities—you cannot lay a border over or under another component. All are one inch wide, and although they are immobile, you can flip the left and bottom segments.

NOW JOIN IN

The program disk contains a variety of fonts, some very attractive. You can also import font files, but the method for doing so is awkward: You must go through the CLI—before accessing DeluxePrint's font menu. Once you have loaded the program fonts, you are stuck with them until you restart. Text styles include bold, italic, underline, box, background, and shadow; you can control inter-character spacing, too. To mix styles on a line, simply place sections side by side. You can change all text characteristics, including the letters themselves, after placement.

Icons are stored to disk in groups of nine. Although all the icons in a set appear on screen when you select one from the group, the computer retrieves each one from the disk individually. Once loaded, however, the icon remains in memory for future access.

When you save a project in DeluxePrint II format, the elements remain intact so you can manipulate individual components at a later time. You can save in IFF format, too, but here the elements lose their independence.

You will find one annoying quirk in the program when you call up a file; DeluxePrint II insists on looking in df0: the first time it attempts to load; you cannot choose another drive until it has grokked through the entire directory. Once a directory is in memory, however, the program recalls it for the next load.

To see your project in hard copy, you simply set the size of the printout by inches in decimal fractions and select vertical or horizontal orientation. For most applications, the program can determine page width from the printer driver and calculate the length automatically. When printing a four-tile sign or a greeting card, however, you must specify the spacing between the panels.

The well-written manual includes a

thorough index. The introductory chapters are followed by sample projects for each format. An extensive reference section details all functions.

I am puzzled as to why Electronic Arts released DeluxePrint II after Commodore officially released version 1.3 of the operating system. As it is, the program works only with AmigaDOS 1.2! If you

Text has top priority—it prints over icons.

have configured your system for 1.3, then, you must give it up to run DeluxePrint II. The Electronic Arts representative I spoke with said he did not know when or if an update would be released to address the deficiency.

I tested the program using a Star Micronics NX-1000 Rainbow printer with the Epson JX-80 driver, and got good results. I was unsuccessful, however, in printing with my Canon PJ-1080A. I tried four drivers, but was not really surprised that none worked; Commodore specifically supports the 1080A only under AmigaDOS 1.3.

DeluxePrint II is the best program of its kind I know of, and it's leagues ahead of the original DeluxePrint. If the AmigaDOS restriction does not bother you, you will be happy with the package.

ORDERING INSTRUCTIONS

For your convenience, you can place a phone order 24 HOURS/7 DAYS A WEEK on our TOLL-FREE LINE 1-800-638-5757. Price, Availability and Compatibility Checks are also Welcome on our order line, Monday thru Friday, 9AM-4PM EST. AFTER HOURS, Orders Only Please!! When placing an order, please specify your COMPUTER MODEL, HOME & DAYTIME PHONE NUMBER, SHIPPING ADDRESS, METHOD OF PAYMENT and ITEMS ORDERED. To help us serve you better, please have all your information, including your CHARGE CARD number, ready before you call us.

ACCEPTED PAYMENT METHODS: We gladly accept payment by PREPAID BY PERSONAL CHECK (will not hold for clearing) or MONEY ORDER; C.O.D. (continental USA only AND \$4.00 ADDITIONAL); MASTERCARD; VISA; SCHOOL PURCHASE ORDERS. All payment must be in USA DOLLARS. THERE IS NO SURCHARGE FOR CHARGE CARDS and your card is NOT charged until we ship.

TECHNICAL SUPPORT

We do our very best to help you with your product selections, before you order and after you receive your product. General questions, price, and compatibility with your computer, etc. will be handled by our order staff at the time you place your order. BUT if you have specific, detailed questions about a product, printer compatibility questions etc., you will get the most help from our TECHNICAL SUPPORT LINE at 215-683-5699. Call Monday thru Friday, 9AM-4PM EST, and our trained tech staff will be happy to help you.

SHIPPING POLICY

ALL ORDERS received before 3PM EST will normally be shipped same or next business day. Out of Stock items will be shipped by the same shipping method as original order, normally within 3 or 4 business days. All UPS shipments are sent SIGNATURE REQUIRED/NO DRIVER RELEASE. Add the following shipping charges to your TOTAL software order.

UPS: GROUND-\$4.00 (cont USA ONLY); AIR/RUSH-\$7.00 (Includes Puerto Rico/Hawaii); OVERNIGHT-\$12.00 PLUS \$2.50 per item (must be received by 12 NOON)

PRIORITY MAIL: USA-\$4.00 (includes APO/FPO); CANADA/MEXICO-\$6.00; OTHER FOREIGN-\$4.00 handling PLUS Actual Shipping (minimum \$12.00)

RETURN POLICY

We have a liberal return policy to better service your needs. Software piracy is a problem, but as long as our policy is not abused, we will continue to honor it. If within 15 days from the time you receive an item, you are not satisfied with it for any reason, you may return it to us for either a refund, exchange or open credit. REFUNDS ARE SUBJECT TO A 10% RESTOCKING FEE PER ITEM RETURNED (\$5.00 MINIMUM PER ITEM). A DEFECTIVE ITEM will be replaced with the same item (NO CHARGE... of course). EXCHANGES/OPEN CREDITS will gladly be issued for the FULL PURCHASE PRICE OF THE ITEM.

WHAT'S NEW?

*Slip on your green sweater and cast your Irish eyes
on these new additions.*

Compiled by Jan Jackson

LIONS AND TIGERS AND BEARS?

NO, IT'S LANDERS, Silicon Worms, and Krellian Mother-ships in **Starray**. You control your Starray ship on a two-way horizontally scrolling screen through seven different levels of play, protecting the world's power installations and destroying alien intruders.

Quadralien presents a dou-

ble mission. You must prevent the meltdown of Astra, the cybernetic nuclear fission complex, and destroy the evil Quadralien forces that have entered the complex. To advance through the levels, you must choose droids to fight for you. Each is equipped with strong and weak points. You

must plan the use of the droid, maintain it, and keep up a fast pace to succeed. Developed by Logotron Ltd., both Starray and Quadralien retail at \$39.95 and are distributed by Spinnaker Entertainment Group, 1 Kendall Square, Cambridge, MA 02139, 617/494-1200.

DEATH AND TAXES

THE NEXT BEST thing to not paying is having help. **Tax Break**, a tax preparation package, includes form 1040, schedules A-E, R, SE and IRA calculations. The software prints IRS-approved tax-form fascimiles. Tax Break/1040 costs \$74.95 and is available from Datamax Research, Box 5000, R4, Bradford, Canada L3Z 2A6.

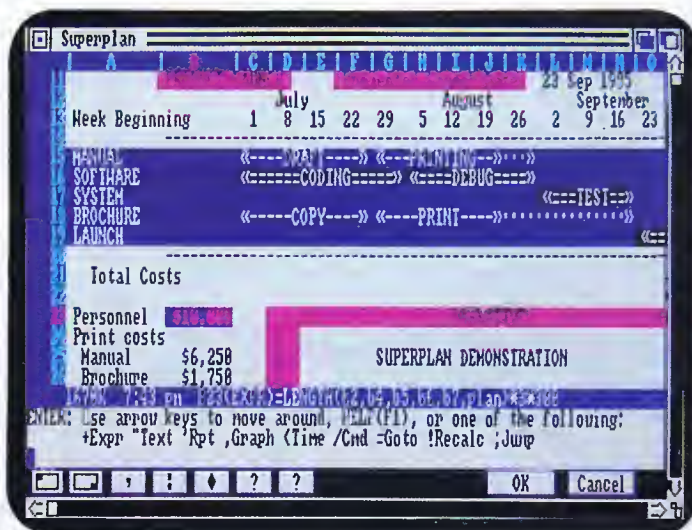

HIT THE STREETS

FIGHT HAND TO hand and foot to head in **Operation: Clean Streets**. You have been assigned the mission of cleaning up the city as Cleanup Harry, an undercover cop with a reputation. Retailing for \$39.95, this game features 3-D animation and five levels of fighting. Get the dirt from Broderbund Software Inc., 17 Paul Dr., San Francisco, CA 94103-2101, 415/492-3500.

PLANNING THE GLOBE

WHAT HAS A 74-function spreadsheet, project management software and business graphics all rolled into one? **Superplan** from Precision. Superplan comes with a macro language that lets you tailor your work environment. The program allows project management activities including

critical path analysis, time/expense planning, resource allocation, gantt and PERT charts. The program supports ARExx, so you can exchange data with other programs. For pricing and more information, contact Precision Inc., 8404 Sterling St., Suite A, Irving, TX 75063, 214/929-4888.

Forecast project costs over time.

DREAM WEAVER

EVADE BONZO THE Bouncer, outsmart the Informer Pig, appease the Oriental Princess or win the Emperor's favor in the **Dream Zone** from Baudville. In this graphics-adventure game, a mad scientist has turned your dreams into reality. By using logic, imagination, persistence, and a sense of humor, you overcome the source of your nightmares. The Dream Zone is available for \$49.95 from Baudville, 5380 52nd Street, SE, Grand Rapids, MI 49508, 616/896-0888.

HI HO SILVER!

ENHANCE YOUR system's graphics capabilities with **Fancy 3D Fonts — Turbo Silver Version**, a two-disk set of three proportionally-sized fonts. The fonts are Called Bold, Ital, and Fanc and emulate the font sets traditionally known as Helvetica Bold, Bookman Italic, and Clarendon Medium. Each font set includes upper and lower case, numbers, symbols and many international characters. The fonts retail for \$79.95. Contact Access Technologies, PO Box 202197, Austin, TX 78720, 512/343-9564. ►

DEALERS SELL

Selling AmigaWorld will make money for you. Consider the facts:

Fact #1: Selling AmigaWorld increases store traffic—our dealers tell us that AmigaWorld is the hottest-selling computer magazine on the newsstands.

Fact #2: There is a direct correlation between store traffic and sales— increase the number of people coming through your door and you'll increase sales.

Fact #3: Fact #1 + Fact #2 = INCREASED SALES, which means money for you. And that's a fact.

For information on selling AmigaWorld, call 1-800-343-0728 and speak with our Direct Sales Manager. Or write to AmigaWorld, Direct Sales Dept., 80 Elm St., Peterborough, NH 03458.

CUT THE CARDS, MATE

YOU AND 90 of your closest friends can play **Aussie Joker Poker**, an Australian poker game. You can select the number of hands per player and the deck size. The program gives you automatic rotation of player order, game status updated to disk, and a password-controlled gambling system. For \$49.95 the games comes

with printed and on-screen rules and instructions. A Joker Poker contest will run through April 1989. The top 20 finalists will receive a round-trip ticket to Las Vegas and a chance to win \$100,000. Aussie Joker Poker is distributed by Mindscape, Inc., 3444 Dundee Road, Northbrook, IL 60062, 312/480-7667.

A new twist on an old favorite.

SIFTING YOUR THOUGHTS

AN OUTLINE PROCESSOR, **Thinker** lets you expand outlines into complete documents. You can use the program as a writing tool, a planning tool, or a database. All record formats are flexible and can link to other documents, pictures, or Workbench applications. You can use Thinker to create simple outlines, for word pro-

cessing, planning books, writing documentation, organizing pictures, on-line documentation, or program design. Thinker is available for \$79, but you can get \$20 off until April. For more information, contact Poor Person Software, 3721 Starr King Circle, Palo Alto, CA 94306, 415/493-7234.

THE SOUTH WILL RISE AGAIN

RETURN TO September, 1863 with **Rebel Charge at Chickamauga**, the latest Civil War simulation from Strategic Simulations. All units are brigade size and may be broken down into demi-brigades, then built up again. You can represent either the Union or the Confederate army and choose

the computer or a friend as an opponent. Join the fight for \$59.95. For more information, contact Strategic Simulations, 1046 N. Rengstorff Ave., Mountain View, CA 94043, 415/964-1353.

A DATABASE FOR ALL SEASONS

PRECISION HAS UPGRADED its Superbase series. **Superbase Professional 3** (\$349.95) includes telecommunications facilities, a new forms editor, and cross-file validation and lookup. Security-key copy protection has also been lifted for registered users. You can now transfer data to and from other computers running Superbase.

A scaled-down version of the professional model, **Superbase**

Personal 2 (\$149.95) includes a text editor, mail-merge facility, browse controls, relational data entry, and the ability to link and retrieve external text, graphic and sound files.

Superbase Personal 2 sells for \$149.95. Registered users of Superbase Professional and Personal should contact Precision Incorporated, 8404 Sterling St., Suite A, Irving, TX 75063, 214/929-4888 for upgrade information.

MODERN MICHELANGELO

PICK UP YOUR brush with **DeluxePaint III**, Electronic Arts' latest version of its popular paint program, offering integrated paint and animation capabilities. For \$149, the stepped-up program includes

Extra-Halfbrite support, direct overscan painting, improved font support and an airbrush feature. Contact Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404, 415/571-7171.

DON'T TALK BACK

SAVE YOURSELF FROM missing birthdays, anniversaries or important appointments with **Nag Plus 3.0**, a new schedule assistant from Gramma Software. The updated program can verbally remind you of up to 99 regular or one-time events. Edit your appointments up to two years in advance and be re-

minded by one of 24 adjustable means. Nag Plus 3.0 will dial the phone, give you a report of the day's appointments, or search the database for a specific event all for \$79.95. To learn more, contact Gramma Software, 17730 15th Avenue N.W., Suite 223, Seattle, WA 98155, 206/363-6417.

A PAT ON THE BACK

NOW YOU CAN do your own back-patting with **Award Maker Plus**. Create professional quality awards, certificates, coupons, or anything else that strikes your fancy. For \$39.95, you get graphics for home, educational, or business use. Intricately-designed borders can be printed in color or black and white. Available from Baudville, 5380 52nd Street S.E., Grand Rapids, MI 49508, 616/698-0888.

STELLAR INVASION

YOU ARE THE Betadroid KAL who must single-handedly deflect the invasion. Use your light-speed weaponry and your ultra-sensor shields with negative ionization. The galaxy's 416 planets wait for liberation. **Galactic Conqueror** retails for \$44.95. Direct your questions to Titus, 20432 Corisco St., Chatworth, CA 91311, 818/709-3693. ■

AC/BASIC™ V1.3 — NEW

Easy to use compiler is **very fast** with great **graphics**. Plus, AC/BASIC is the only BASIC compiler for Amiga that is **compatible with the AmigaBASIC** interpreter so your existing programs can be compiled with no changes and run up to **50x faster**.

Easy to use documentation is indexed and includes over **200 examples** on disk: plus a full **spreadsheet** written in AC/BASIC and **HAM** graphics examples

Extensions include: **SELECT CASE**, **BLOCK IF**, **STATIC** arrays.

Recursive subprograms. Create stand-alone applications (no redistribution fee) NCP \$195.

AC/FORTRAN™

Mainframe quality, full feature **ANSI FORTRAN 77** compiler includes: **Debugger**, Linker, Library Manager, Runtime Library, **IEEE** math, and **C** interface. Supports **Complex** numbers, **Virtual** arrays, **Overlays** and Linking. Not copy protected. \$295.

68020/68881 version also available \$495.

Hints, tips, and techniques

from your fellow Amiga users.

EMPTY FILE DELETION

IF YOU HAVE ever gotten stuck with an Empty file, which usually results from an unsuccessful attempt to download a file from a bulletin board, then you know how frustrating it can be to delete one. After accumulating many Empty files on my disks, I finally found a way to delete them. Using ED, create a new file in RAM with the same name as the Empty file you wish to delete. Then simply copy the new file over the old one and delete it. There, now it's gone!

*Brian Ecton
Garland, TX*

AAARGH!

IN THE ROLE-PLAYING arcade game Aaargh!, after you destroy the first city and find the egg, the surefire way to destroy your adversary in the battle for the egg is to just start punching. Stand still (do not move forward), put the joystick in the punch position and keep it there. Let the monster come to you and you will win every time. If instead you try to get fancy, the monster will win every time.

*Michael J. Cervetti
Cordova, TN*

DPaint SMOOTHING

HERE'S A HINT for those who use DeluxePaint II and its powerful special effects. If you want to smooth a part of the picture you are editing, select it as a brush; then, enter the perspective mode by pressing the keypad Enter key, specify the anti-aliasing (smoothing) level you wish to use from the Effects menu, and click the left mouse button. This method has two advantages: First, you can choose the smoothing level you wish to

use; and second, you can even rotate or move the results.

*Alex Bienchisii
Rome, Italy*

BASIC COLOR FADES

HAVE YOU EVER wondered how professional programmers make colors fade on and off between screens and thought that it would be neat to use this effect in your own programs? It's easy using Amiga Basic. I use the PALETTE statement to create my screen colors. To start with, I use a black background and fade the colors on. Here is an example:

```
FADE.ON.:  
FOR I=0 TO 1 STEP .02  
PALETTE 0,0,0,0  
PALETTE 1,I,I,I  
PALETTE 2,I,0,0  
PALETTE 3,0,0,I  
NEXT I
```

Using this in a GOSUB routine will save you time and memory; just add a RETURN statement after the NEXT I statement. This simple loop demonstrates the colors fading on from black to white, red, and blue. The loop could be made more complex to accommodate different colors.

To fade the colors off, all you have to do is reverse the FOR statement:

```
FADE.OFF.:  
FOR I=1 TO 0 STEP -.02  
PALETTE 0,0,0,0  
PALETTE 1,I,I,I  
PALETTE 2,I,0,0  
PALETTE 3,0,0,I  
NEXT I
```

Using this simple GOSUB routine makes your programs look professional,

and it is a great way to show off your Amiga Basic programming skills.

*Richard Hyatt
Richmond Hill, Ontario*

SAY PROOFREADER

GENERALLY CONSIDERED AN interesting but slightly frivolous feature, the Amiga's built-in speech capability is as useful as the stodgiest spreadsheet to anyone who must enter a lot of text or numeric data accurately from the keyboard.

The AmigaDOS SAY command lets you proof your work quickly and easily against a printed source without having to glance constantly back and forth between the source and the screen.

To do this, save the work to a disk file (we'll call it POWER.DAT here), exit your word processor or spreadsheet, and call up a CLI. Make sure POWER.DAT is in the current directory. At the prompt, type:

```
SAY -X POWER.DAT
```

(Note the space between SAY and -X.) The pronunciation may be slightly Martian, but the voice is clear enough to catch any and all mistakes in a long table of numbers, and most mistakes in text. Formatting codes from a word processor may cause error messages on the screen, which you can ignore. To bail out once the Amiga has started talking, press CTRL-C.

*Bob Keefer
Creswell, OR*

If you have an idea you'd like to share with our readers, send it to Hors d'oeuvres, AmigaWorld Editorial, 80 Elm St., Peterborough, NH 03458. If your idea gets published, you'll receive an AmigaWorld surprise gift. ■

HELP KEY

Load-and-Run compiled this column to link

up with your problems, so you can execute the solutions.

By Louis R. Wallace

NATIVE TONGUE

Q: *I want to convert Amiga Basic to the Amiga's faster native language. Would that be machine language? What would I need?*

J.S. Chastain
Cleveland, GA

A: The simplest way to convert Amiga Basic to machine language is by using an Amiga Basic compiler, such as the Absoft A/C Basic Compiler. This programmer's tool will take an Amiga Basic source file and convert it to executable machine language. While the resulting program will run at least five times faster, it will not perform as well as a program originally written in 68000 assembly language.

If you want the fastest possible program, then you should write your program in assembly language directly with an assembly language development tool, such as C.A.P.E. 68K (Inovatronics Inc.). Assembly language gives you the full power of the Amiga, but it does demand a lot of development time. Operations you can perform in a single Amiga Basic command require pages and pages of assembly code.

If your only language experience is with BASIC, you might want to make an intermediate move to C or Modula-2 before making the transition to assembly lan-

guage. These languages are much easier to master than assembly and are almost as fast.

IBM TRANSFORMATIONS

Q: *Will any 3 1/2-inch-format IBM software run on an Amiga 500? If so, how can I tell which programs will work?*

G. Nesbit
Collinsville, IL

A: You cannot run the software straight out of the box. You can, however, use Commodore's Transformer, a program that lets you run a very limited selection of IBM software. You can run only text-based programs, as the Transformer does not support graphics.

LIBRARY REDIRECTION

Q: *Can I use a LIBRARY routine from Amiga Basic to send the output from the FILES command to the printer instead of the screen?*

S. Young
Appleton, WI

A: I know of no routine that will redirect the Amiga Basic FILES command. You can write a subprogram, however, that will use a LIBRARY routine to create a new Amiga Basic command that provides a directory. The example com-

mand below, called CLI, will give you a directory listing and store it in a temporary file in RAM. You can direct the

file to the screen or a printer. (With extra work, you could turn the routine into a general CLI command parser.) ■

```
' redirect output to a
' file in RAM:
DECLARE FUNCTION Execute& LIBRARY
DIM f$(1000) ' max # of file entries
counter=0
command$="list" ' or use dir
CLI (command$) ' the new command
OPEN "ram:temp" FOR INPUT AS #1
WHILE NOT EOF(1)
  LINE INPUT#1,f$(counter)
  counter=counter+1
  IF counter=1001 THEN counter=1000
WEND
counter=counter-1
IF counter<1 THEN
  PRINT "Nothing found!"
  GOTO MyExit
ENDIF
COLOR 2,0
PRINT f$(0)
LPRINT f$(0)
FOR i=1 TO counter-1
  a$=MID$(f$(i),30,3)
  COLOR 1,0
  IF a$="Dir" THEN COLOR 3,0
  PRINT f$(i)
  LPRINT f$(i)
NEXT
COLOR 2,0
PRINT f$(counter)
LPRINT f$(counter)
COLOR 1,0

MyExit:
  END

' subprogram functions as
' the new command: CLI
SUB CLI (command$) STATIC
  LIBRARY "dos.library"
  command$=command$+" > ram:temp"
  x=Execute&(SADD(command$+CHR$(0)),0,0)
  LIBRARY CLOSE
END SUB
```

Flexible Data Systems

FData-10 Disk Drive

This external 3.5" Drive is a very inexpensive unit to make the life with your Amiga easier. The FData-10 is compatible with the original Amiga-drive but is quieter, smaller and has a longer cable (27inch) to connect it to the Amiga.

Oh yes, before we forget to tell you,
it's only **\$139.75 !**

**1988 STATISTICS FOR
EARL WEAVER BASEBALL™**

as well as... 1919, 1952, 1959, 1961, 1978, 1986, 1987, and more!

YES, someone has finally done their homework and researched the present and past years in baseball. Compiling statistics from the American League, the National League, as well as other sources, allows us to say this may very well be as complete as possible. Now you can play all your favorite teams and years over to enjoy them once again. We also include a yearly schedule, so you can play the games as they really were, right on the disk! Included are all the American and National League teams as well as updated ballfields. All teams have been play-tested for accuracy. Disks are available for Amiga & IBM computers and cost only \$19.95

The AmigaWorld Public Domain Library brings you Devware's disks for the developer and advanced user, Chiron Conception's programs for special-interest users and Software Excitement's disks for the Workbench user.

Each disk is fully tested, de-bugged, documented, and organized for easy access. But remember, most of these programs are contributed freely to the Amiga community, and the quality, usefulness, and results you might get cannot be guaranteed. Some are "shareware" programs for which the author asks for contributions if you feel the program is good enough.

Each disk is just \$7.00!

Special Feature:

#SE 115 - PD Word Processor. With spell checker and dictionary, VDraw (shareware paint), VT-100 term emulator, appointment calendar.

This month's selections

From Software Excitement:

#SE 05 - DPSSlide. Slide show utility for IFF Images. DPaint not required.

#SE 13 - Banner. Print both vertical and horizontal. Easy to use. Print to screen, disk, or printer.

#SE 29 - Hack. Fantasy adventure game.

#SE 40 - Archive/Unarchive. Compress and uncompress files.

#SE 44 - Games3. Life, Vegas Slots, Reversal, more.

#SE 91 - Freedraw. Drawing program, speech toy demo, a dozen more, most with source code.

#SE 116 - Business II. VC-Spreadsheet, HP 10e calc, diversions, more.

#SE 117 - Business III. DataBase, RSLClock (utility), AmigaSpell, new fonts.

#SE 118 - Games, Missile Command, 3-D, Triclops, Cosmo-asteroids clone, BreakOut, Yatzee, Hack, more.

#SE 131 - Pac clone. Better than original.

#SE 132 - Videomaker Utilities. Desktop video utilities.

#SE 134 - Applications I. Label maker/printer, grocery-list maker, disk cataloger, star viewer (planetarium), more.

From Chiron Conceptions:

#CC 201 - BASIC programs I. Over four dozen Amiga Basic programs including entertainment, education, utilities, applications, and much more.

#CC 301 - Utilities #1. Compiled, ready-to-run programs (many with C source) for dozens of utilities including FixDisk, IconExec, Free-map, GFXmem, LAR, GREP, MyCII, Print, Squeeze, USQ, Shell, WLC, Xref, and more.

#CC 302 - Utilities II. A collection of utilities, compiled and ready to run, including DiskSalvage, FileZap, Fixobj, IconExec, ARC, CompressZ, XLISP, Screendump, and more.

#CC 303 - Utilities III. Includes MVP-FORTH, 12 new character set fonts, Dir Copy, ShowHAM, Zapicon (converts DPaint brush to Icon), more.

#CC 304 - Graphics Utilities. Including MacView (w/18 MacPaint paintings), 3 screen-dump programs, HAM to HAM IFF converter, FONTED (design your own character sets), more.

#CC 305 - Utilities IV. Over 30 utilities, including Browse, DiskCat, DiskMap, HAM-Print, KwikCopy, LibDir, Alticon, Klock, MemView, PopCLI, SpriteMaker, Tree, more.

#CC 307 - Directory Utilities. Over a dozen different DirUtil-type programs each with different features. Includes text and C source.

#CC 308 - Utilities V. More utilities, including ChangeKickStart, Diabel, MenuCat, PrtDrvGen, Xicon, NewZap, Monitor, JOBS, DiskX, FixHUNK 2, Undelete, XCOPY, more.

#CC 310 - ARP 1.1, AmigaDOS Replacement Project. Replaces most 1.2 AmigaDOS commands with new, faster, and more powerful commands. Includes docs, C

source, executables, and install program.

#CC 405 - DeluxeVideo Tutorial Disk. Examples and tutorials on using DVideo. (Requires Deluxe-Video.)

#CC 515 - Perfect Sound Effects I. 40 sound effects recorded with perfect Sound all in IFF format, includes shareware version of Perfect Sound program to play and edit sounds.

#CC 602 - DPaint Slideshow I. 30 DPaint pictures with auto-run slideshow. (DPaint not required.)

#CC 607 - Mandelbrot Explorer. Shareware Mandelbrot designer by T. Wilcox. Dozens of mouse-driven menu selections and sample images slideshow.

#CC 614 - Juggler animation. Famous traced animated clown juggling three mirrored spheres.

#CC 633 - New Movies. 4 animations for Amiga (requires at least 1MB RAM).

#CC 909 - Home Applications. Grocery-list construction set, address book, word processor, text editor, appointment reminder, database, loan-amortization prog.

From DevWare:

#DW 4 - Diskmap. DOSCommands rewrites, DOSDisassembly of most DOS commands, DOSPlus extra DOS utilities, menu clock, shellV2.03 (M.Dillon's command shell), Unifdef, Xspell, more.

#DW 7 - 2 BBS progs. w/docs., Grep text utility, MenuEd1.2, Tektronics 4010 terminal emulator.

#DW 8 - Set of disk-performance tests, font editor, Hack game clues, MandFXP-D2 fast Mandelbrot (shareware), PowerWindows demo,

memory speed benchmark test, Shell2.04M (Matt Dillon's command shell that adds aliases, command history, and more to CLI), more.

#DW 10 - Memory test prog., how to build a dual floppy, 2 input event handler demo progs., Lattice3.10 bug fixes, sound editor, PipeDevice, random number generator in C, Unix uuencode and uudecode utilities, more.

#DW 15 - Amiga version of Unix's Yacc, how to build a battery-driven clock for Amiga, program for handling patches of MIDI instruments, VT100v2.6 (includes Xmodem and Kermit).

#DW 17 - DBWRender. Very sophisticated package for rendering ray-traced images. C source included.

#DW 22 - AmigaMon1.1, Forth language graphics demo, disk performance measurer, display prefs utility, Draco language fractal demo, window drop-shadow utility, Icon maker, JoBS1.1, mCad, midi interface schematics, MoonMouse, more.

#DW 24 - Hard disk backup prog., Manx C version 3.40A bug fixes, 40 printer drivers, Unix-like command interpreter w/history and aliases, curve-fitting spline prog, 2 trackballs for Amiga (MacBall and Atari 2600), video pattern generator, more.

#DW 29 - AmigaDOS disassembly, asynchronous I/O routines, auto "cancel" utility, Helios2, NoClick-Start utility to cancel empty drive clicking, Tek4695 printer driver, text files including early Amiga PAL chip problem fix, more.

This index is provided as an additional service. The publisher does not assume liability for errors or omissions.

FYI

As a service to its readers, *AmigaWorld* will periodically publish the names of companies who are having difficulties meeting their customer obligations or who have gone out of business. Readers are advised to contact *AmigaWorld* before dealing with these companies: **Computer Best**, **FutureSoft Applications**. **Pagestream from SoftLogik Corp.**, St. Louis, MO, has been advertised for 11 months; the product has not been shipped yet. *AW* will let readers know when the product becomes available. If you have any questions or concerns about advertisers in *AmigaWorld*, please contact: **Susan Maizel**, Customer Service Representative, *AmigaWorld Magazine*, 80 Elm Street, Peterborough, NH 03458. Through our customer service representative, *AmigaWorld* assists readers with problems they may have with advertisers. However, *AmigaWorld* does not assume any liability for advertiser's claims.

A. How would you rate this issue of AmigaWorld? (pick one)

- ☐ 1. GREAT! ☐ 5. Fair
☐ 2. Very Good ☐ 6. Poor
☐ 3. Pretty Good ☐ 7. Very Poor
☐ 4. Good ☐ 8. Terrible

B. What will be your next major peripheral purchase?

- ☐ 1. Monitor ☐ 7. Gen Lock or Frame
☐ 2. Dot matrix printer ☐ 8. Grabber
☐ 3. Modem ☐ 8. Music (Midi,
Keyboard, etc.)
☐ 4. Memory Expansion ☐ 8. Color printer
☐ 5. 3.5" Floppy Drive ☐ 10. Laser printer
☐ 6. Hard disk drive

C. Check all of the endings that best complete this sentence: "Most of AmigaWorld is..."

- ☐ 1. Just Right ☐ 6. Useless
☐ 2. Too Simple ☐ 7. Interesting
☐ 3. Too Complex ☐ 8. Banned
☐ 4. Fluff ☐ 9. Invaluable
☐ 5. Useful

D. What topics would you like to see covered in future issues of AmigaWorld? (Please pick three.)

- ☐ 1. C Language ☐ 11. Rumors
☐ 2. Amiga Basic ☐ 12. Buyer's Guides
☐ 3. CUI ☐ 13. Comparative Reviews
☐ 4. Telecommunications ☐ 14. Music
☐ 5. Business Applications ☐ 15. Graphics
☐ 6. IBM compatibility ☐ 16. Program Listings
☐ 7. Home Applications ☐ 17. New Products
☐ 8. Education ☐ 18. Opinions
☐ 9. Video ☐ 19. Hardware Projects
☐ 10. Science and Engineering ☐ 20. Other

E. What are your favorite things about AmigaWorld? (Please pick all that apply.)

- ☐ 1. Zergest (Editor's Page) ☐ 7. Tutorials
☐ 2. Repartee (Letters) ☐ 8. Hors d'oeuvres (hints/tips)
☐ 3. Reviews ☐ 9. Advertisements
☐ 4. Notepad (Industry news) ☐ 10. Digital Canvas
☐ 5. Help Key (questions) ☐ 11. Articles
☐ 6. Features

F. Which of the following categories do you plan to purchase software from in the next 12 months?

- ☐ 1. Entertainment ☐ 10. Financial Management
☐ 2. Word Processing ☐ 11. Graphics
☐ 3. Communications ☐ 12. Education
☐ 4. Spreadsheets ☐ 13. Music
☐ 5. Home Productivity ☐ 14. Animation
☐ 6. Programming ☐ 15. Sound/Speech
☐ 7. Software Development ☐ 16. CAD/CAM
☐ 8. Video ☐ 9. Database Management

G. Where did you get this copy of AmigaWorld?

- ☐ 1. I subscribe ☐ 3. Other
☐ 2. Newsstand

H. Where do you buy your computer products? (Please pick one.)

- ☐ 1. Computer Dealer ☐ 4. Discount/Department Store
☐ 2. Mail Order ☐ 5. Other
☐ 3. Manufacturer

I. Do you own an Amiga?

- ☐ 1. Yes ☐ 2. No

J. Where do you use your Amiga?

- ☐ 1. Home ☐ 5. Both at home and work
☐ 2. Work ☐ 6. Both at home and school
☐ 3. School ☐ 7. I don't use an Amiga
☐ 4. At home for business

K. Is this your copy of AmigaWorld?

- ☐ 1. Yes ☐ 2. No

L. If you are not a subscriber, please circle 499.

- M. If you would like a one year subscription to AmigaWorld (12 issues), please circle 500 on this card. Each subscription is \$29.97. Canada and Mexico \$38.97. Foreign Surface \$49.97. Foreign Airmail \$84.97 (U.S. Funds Drawn on U.S. Bank). All rates are for one year only. Please allow 6-8 weeks for delivery.

March card valid until May 31, 1989.

Name _____

Address _____

City/State/Zip _____

Telephone _____

A. How would you rate this issue of AmigaWorld? (pick one)

- ☐ 1. GREAT! ☐ 5. Fair
☐ 2. Very Good ☐ 6. Poor
☐ 3. Pretty Good ☐ 7. Very Poor
☐ 4. Good ☐ 8. Terrible

B. What will be your next major peripheral purchase?

- ☐ 1. Monitor ☐ 7. Gen Lock or Frame
☐ 2. Dot matrix printer ☐ 8. Grabber
☐ 3. Modem ☐ 8. Music (Midi,
Keyboard, etc.)
☐ 4. Memory Expansion ☐ 8. Color printer
☐ 5. 3.5" Floppy Drive ☐ 10. Laser printer
☐ 6. Hard disk drive

C. Check all of the endings that best complete this sentence: "Most of AmigaWorld is..."

- ☐ 1. Just Right ☐ 6. Useless
☐ 2. Too Simple ☐ 7. Interesting
☐ 3. Too Complex ☐ 8. Banned
☐ 4. Fluff ☐ 9. Invaluable
☐ 5. Useful

D. What topics would you like to see covered in future issues of AmigaWorld? (Please pick three.)

- ☐ 1. C Language ☐ 11. Rumors
☐ 2. Amiga Basic ☐ 12. Buyer's Guides
☐ 3. CUI ☐ 13. Comparative Reviews
☐ 4. Telecommunications ☐ 14. Music
☐ 5. Business Applications ☐ 15. Graphics
☐ 6. IBM compatibility ☐ 16. Program Listings
☐ 7. Home Applications ☐ 17. New Products
☐ 8. Education ☐ 18. Opinions
☐ 9. Video ☐ 19. Hardware Projects
☐ 10. Science and Engineering ☐ 20. Other

E. What are your favorite things about AmigaWorld? (Please pick all that apply.)

- ☐ 1. Zergest (Editor's Page) ☐ 7. Tutorials
☐ 2. Repartee (Letters) ☐ 8. Hors d'oeuvres (hints/tips)
☐ 3. Reviews ☐ 9. Advertisements
☐ 4. Notepad (Industry news) ☐ 10. Digital Canvas
☐ 5. Help Key (questions) ☐ 11. Articles
☐ 6. Features

F. Which of the following categories do you plan to purchase software from in the next 12 months?

- ☐ 1. Entertainment ☐ 10. Financial Management
☐ 2. Word Processing ☐ 11. Graphics
☐ 3. Communications ☐ 12. Education
☐ 4. Spreadsheets ☐ 13. Music
☐ 5. Home Productivity ☐ 14. Animation
☐ 6. Programming ☐ 15. Sound/Speech
☐ 7. Software Development ☐ 16. CAD/CAM
☐ 8. Video ☐ 9. Database Management

G. Where did you get this copy of AmigaWorld?

- ☐ 1. I subscribe ☐ 3. Other
☐ 2. Newsstand

H. Where do you buy your computer products? (Please pick one.)

- ☐ 1. Computer Dealer ☐ 4. Discount/Department Store
☐ 2. Mail Order ☐ 5. Other
☐ 3. Manufacturer

I. Do you own an Amiga?

- ☐ 1. Yes ☐ 2. No

J. Where do you use your Amiga?

- ☐ 1. Home ☐ 5. Both at home and work
☐ 2. Work ☐ 6. Both at home and school
☐ 3. School ☐ 7. I don't use an Amiga
☐ 4. At home for business

K. Is this your copy of AmigaWorld?

- ☐ 1. Yes ☐ 2. No

L. If you are not a subscriber, please circle 499.

- M. If you would like a one year subscription to AmigaWorld (12 issues), please circle 500 on this card. Each subscription is \$29.97. Canada and Mexico \$38.97. Foreign Surface \$49.97. Foreign Airmail \$84.97 (U.S. Funds Drawn on U.S. Bank). All rates are for one year only. Please allow 6-8 weeks for delivery.

International Soccer

A.M.A.S. The Advanced MIDI Amiga Sampler

"Without a doubt the best of the soccer action games"

Amiga Computing, October 1988

If you're a soccer fan, then Microdeal's International Soccer is the game for you. Superb graphics, plus the ability to select team colors, wind direction and speed, wet or dry weather, and day or night game conditions, make this one of the best simulations ever. You can have high caliber competition under any conditions. One or two players can take on the computer, or two players can play against each other. With the optional four player adapter from Microdeal you can pit three players against the computer, two players against two players, or two against one. You won't believe the action. The animated crowd, electronic scoreboard, and on screen refereeing keep the gameplay fast and furious. Don't be left out of bounds. International Soccer is playing now!

(Color only—1,2,3, or 4 joysticks required, optional 4 player adapter available)

AMAS is a full featured Stereo audio digitizer complete with a full implementation MIDI interface, all built into a single stylish hardware unit that compliments your computer. There are no cumbersome extras needed. The digitizer accepts mono or stereo input via its line input sockets and is provided with an extra microphone socket for direct vocal input. The MIDI sockets consist of MIDI IN, OUT, and THRU. Hardware versions exist in A1000 and A500/2000 formats.

The software employs the ultimate graphics/mouse user interface. Features include:

- Left, Right or stereo digitizing
- Sampling rates of up to 28KHz
- Dual real time oscilloscopes (1 for each channel)
- Filter ON/OFF where applicable
- Real time spectrum analysis
- Auto record trigger on input level
- Up to eight banks on 2 meg machines (200-250k required per bank)
- Up to 10 stereo samples per bank
- Load and Save samples in RAW or IFF data formats
- Filter ON/OFF where applicable

All Editing functions are available including: Cut, Paste, Insert, Delete, Copy, Overlay, Mix, Reverse, Fade In/Out, Volume Up/Down, Sample Compress/Expand, Filter, Stereo "Bounce", and Channel Swap.

Why settle for less than the best? Ask your dealer for a demonstration today!

DIGI-VIEW GOLD

All-New!
Hardware and Software
Designed for A500/2000—
Even Better Pictures Than Before!

1.

2.

Actual 4096 color Digi-View Gold picture

3. Simply the Best.

The all new Digi-View Gold is the best video digitizer for the Amiga. Period. Nothing else even comes close. Why? The secret is that Digi-View Gold captures 2.1 million colors in memory, giving you an incredible 100,000 apparent colors on screen simultaneously.

And it's easy to use. Just focus your video camera on any object or picture, and in seconds Digi-View Gold turns it into Amiga graphics that glow with vibrant color and clarity. Whether you are creating graphics for desktop publishing, presentations, video, or just for fun, Digi-View Gold gives you dazzling images with amazing simplicity.

Digi-View Gold is designed specifically for the Amiga 500 and 2000, and plugs directly into the parallel port. Digi-View Gold's powerful image capture and manipulation software (version 3.0) now has complete control of color and sharpness, full overscan, extra halfbrite, and a special line art mode for desktop publishing.

Only Digi-View Gold:

- Can digitize in all Amiga resolution modes from 320x200 up to 768x480 (full hi-res overscan)
- Uses 2 to 4096 colors (including extra halfbrite)
- Uses exclusive Enhanced HAM for super fine detail
- Is 100% IFF compatible and works with any graphics software
- Can digitize 21 bits per pixel (2.1 million colors) for the highest quality images possible
- Has advanced dithering routines that give an apparent 100,000 colors on screen simultaneously
- Has powerful Image processing controls for complete IFF picture manipulation

If you want the highest quality graphics for your Amiga, as easy as 1, 2, 3; then you need the new version of the best selling video digitizer of all time: Digi-View Gold.

Only \$199.95

Digi-View Gold is available now at your local Amiga dealer.
Or call 1-800-843-8934

NewTek
